INTRODUCTION

This document provides an analysis of three distinct, yet closely related actions being contemplated by the City of Lathrop. These include an update to the Lathrop Municipal Code and Zoning Map (referred to as, the “Municipal Code Update”), an update to the Central Lathrop Specific Plan (CLSP) Phase 2 (referred to as, the “CLSP Phase 2 Amendment” or “CLSP-2 Amendment”), and the proposed Ashley warehouse project (referred to as, the “Warehouse Project”). The characteristics of these three actions are described in greater detail below.

These three projects are being implemented as a result of the City’s recent comprehensive General Plan update, which was adopted in September 2022 (“2022 Lathrop General Plan” or “General Plan”). As a result of the recently-adopted General Plan, the City is initiating an update to the Municipal Code and Zoning Map to bring the Municipal Code and Zoning map into consistency with the 2022 Lathrop General Plan. The City is updating the Phase 2 portion of the Central Lathrop Specific Plan in order to bring the CLSP Phase 2 into consistency with the General Plan. The City has also received a development application for the Ashley Warehouse project within the boundaries of the CLSP Phase 2 area. Given the close relationship between these three actions, and the fact that they are all subsequent steps to implement the Lathrop General Plan, the City has analyzed these three projects collectively, in this environmental document. This document refers to all three projects collectively as the “Project.”

These three projects are described in greater detail on the following pages. The analysis included in this report focuses on the projects’ consistency with the General Plan, the analysis contained in the 2022 Lathrop General Plan Environmental Impact Report (EIR), and any site-specific environmental impacts or cumulative impacts that may result from Project implementation.

As explained in the following pages, the proposed projects are consistent with the 2022 Lathrop General Plan, for which an EIR was prepared and certified, and there are no site-specific or cumulative impacts associated with the proposed projects that have not been fully addressed in a previous environmental document, or that cannot be reduced to a less than significant level through the application of uniformly applied development policies and/or standards. The findings presented below demonstrate that no additional environmental analysis/review is required under the California Environmental Quality Act (CEQA) prior to approval of the proposed projects.

The Municipal Code Update and the CLSP Phase 2 Amendment would not result in any physical development, project entitlements, or other ground disturbing activities. The proposed Ashley Warehouse Project would result in the development, construction and

operation of a retail, office/call center, and warehouse and distribution facility (described in greater detail below). The Municipal Code Update and the CLSP Phase 2 Amendment would implement the policy guidance provided in the 2022 Lathrop General Plan, and would bring these planning documents into consistency with the 2022 Lathrop General Plan. While all three actions/projects are addressed in this environmental analysis, the bulk of this analysis focuses on the proposed Ashley Warehouse Project in order to determine if any site specific impacts would occur from development and operation of the Ashley Warehouse Project.

STUDIES AND REPORTS

This document includes references to several reports that were prepared for the proposed Warehouse project, and are provided in the following reference materials (included as attachments):

- Attachment A. Biological Resources Analysis Report For The Dos Reis Ranch Property. Prepared by: Olberding Environmental, Inc. May 2021.
- Attachment B. Preliminary Geotechnical Engineering Report. Prepared by: Terracon Consultants, Inc. August 16, 2021.

- Attachment I: Lathrop Ashley Warehouse CalEEMod output file

PROJECT OVERVIEW

The Project area consists of the “CLSP Phase 2 area,” the “Warehouse Site,” and the City of Lathrop as further discussed below.

PROJECT LOCATION

Municipal Code: and Zoning Map: The Lathrop Municipal Code and Zoning Map are applicable Citywide.

CLSP Phase 2 Amendment: The CLSP is located within the northwest portion of the City. Phase 2 of the CLSP includes the northernmost portion of the CLSP. Figure 1 shows the location and boundaries for the entire CLSP area, and identifies the Phase 2 and Phase 2 areas of the CLSP. Figure 2 shows the project areas within the city. As noted above, the CLSP Phase 2 area is the subject of the analysis for this portion of the project.

Warehouse Site: The Warehouse Site is composed of approximately 89.82± acres located at the northwest corner of Dos Reis Rd and Manthey Road. The Warehouse Site and the associated facilities and site improvements are located exclusively on Assessor's Parcel Number (APN) 192-020-140. The Warehouse Site and site plan are shown on Figure 3.

EXISTING SITE AND LAND USES

CLSP Phase 2 Amendment: The CLSP Phase 2 Amendment Project area is substantially undeveloped and largely vacant, with sparse ruderal vegetation, large lot residential uses, and existing agricultural uses in the northern portions of the CLSP Phase 2 Project area. The 2022 Lathrop General Plan designates the CLSP Phase 2 Project area as Limited Industrial. Figure 5 shows the 2022 General Plan land uses for the CLSP Phase 2 area and the surrounding area. The CLSP Phases 2 area is zoned Office Commercial, Variable Density Residential uses, Parks and Open Space and Institutional uses. Figure 6 shows the existing and proposed zoning for the CLSP Phase 2 Project area.

Ashley Warehouse (Warehouse Site): The existing Warehouse Site is currently undeveloped and largely covered in bare dirt, with sparse growths of grasses. The General Plan designates the Warehouse Site Limited Industrial. Figure 5 shows the General Plan land uses for the Warehouse Site and surrounding area. The Warehouse Site is zoned Office Commercial, Variable Density Residential, and Park. Figure 6 shows the existing and proposed zoning for the Warehouse Site.

PROJECT DESCRIPTION

The proposed projects would include an update to the Lathrop Municipal Code and Zoning Map, adoption of the Central Lathrop Specific Plan (CLSP) Phase 2 Amendment, and approval of the Warehouse Project (combined as the proposed project). Each project component is described below:

A. MUNICIPAL CODE AND ZONING MAP UPDATE:

The proposed Municipal Code Update would modify Title 10 (Vehicles and Traffic), and adopt various amendments to Title 17 (Zoning) of the Lathrop Municipal Code (LMC); and for those properties that were classified with new general plan land use designations as part of the 2022 General Plan Update, to assign corresponding zoning designations to those same properties on the Lathrop Zoning Map, in order to bring the Code into consistency with the 2022 Lathrop General Plan and meet the requirements of Government Code Section 65860.

The Project includes rezoning the CLSP-2 Project area to potentially allow for Limited Industrial site uses, and a park and open space buffer area. The purpose of this proposed rezoning is to establish consistency with the 2022 General Plan land use designations. This action is being initiated by the City of Lathrop.

B. CLSP PHASE 2 AMENDMENT:

The City of Lathrop adopted the Central Lathrop Specific Plan (CLSP) on November 9, 2004. The 2004 CLSP provided for the development of approximately 1,521 acres located south of the northern city limit line, west of Interstate-5, north of the Mossdale Village planning area, and east of the San Joaquin River as illustrated in Figures 1 and 2 (CLSP Plan Area).

The CLSP Plan Area consists of two primary development phases. Phase 1 of the CLSP covers approximately 797 acres in the southern portion (Phase 1 Plan Area), and Phase 2 applies to the 724-acre northern portion (Phase 2 Plan Area). Dos Reis Road serves as the dividing line between the two phases. Phase 1 of the CLSP has largely been entitled and significant development has occurred throughout Phase 1.

The Central Lathrop Specific Plan Phase 2 Amendment (“CLSP Phase 2 Amendment”) includes updates and modifications only for the Phase 2 Plan Area portion of the Central Lathrop Specific Plan, comprising the 724-acre area north of Dos Reis Road. The CLSP-2 Amendment does not, in any way, alter, amend, or otherwise change the vested entitlements for the CLSP Phase 1 area, which is the 797-acre area south of Dos Reis Road. The original 2004 CLSP and the associated entitlements continue to govern the residential mixed use development in the CLSP Phase 1 Plan Area.

The CLSP-2 Amendment revises all policies, regulations, land use concepts, and development standards with respect to Phase 2 and supersedes the 2004 CLSP for the area north of Dos Reis Road.

The City of Lathrop is the sponsor of the CLSP-2 Amendment in order to modify the 2004 CLSP for the Phase 2 Plan Area so that the CLSP-2 Amendment is consistent with the

recently adopted 2022 Lathrop General Plan. The 2004 CLSP designated residential, parks, schools, and commercial uses within the CLSP Phase 2 Plan Area. The CLSP-2 Amendment changes the residential, parks, schools, and commercial land uses within the Phase 2 Plan Area to Limited Industrial and retains the Open Space designation consistent with the 2022 Lathrop General Plan. The CLSP-2 Amendment will implement the 2022 General Plan policies and establish clear direction for the development of the CLSP-2 Plan Area. This land use change is consistent with the City's efforts to support the Mossdale Tract's provision of a 200-year urban level of flood protection.

The Central Lathrop Specific Plan (CLSP) Phase 2 Amendment will bring the CLSP into consistency with the recently adopted 2022 Lathrop General Plan. Specifically, the CLSP Phase 2 Amendment would implement Implementation Measure LU-5.f, which requires the City to update the CLSP to 1) bring the Specific Plan's land use map into consistency with the General Plan, 2) establish a circulation network; 3) establish site design standards for new industrial projects; 4) identify financing and cost-recovery methods to fund roadway and infrastructure improvements; 5) establish circulation design standards; 6) provide opportunities to provide employee-serving amenities on-site; and 7) include provisions that all development projects proposed north of Dos Reis Road and south of De Lima Road be required to obtain a Conditional Use Permit (CUP), which shall be subject to discretionary review by the City Council.

The Land Use and Development Plan is the primary implementing component of the CLSP-2 Amendment. The land use update designates the CLSP-2 Plan area Limited Industrial, consistent with the 2022 Lathrop General Plan, and would include a parks and open space buffer. Additionally, policy amendments are included throughout the CLSP for consistency with the land use plan and environmental impact minimization policies included in the 2022 Lathrop General Plan.

Prior to any future development within the CLSP-2 area, a site-specific development application would be required for projects proposed within the CLSP Phase 2 Project area. At that point, based on the details of a specific project, traffic and other utility analyses would be performed to identify appropriate project requirements, or mitigation measures and conditions of approval.

The proposed CLSP-2 Amendment is included as Attachment E.

C. WAREHOUSE PROJECT

The Warehouse Project requires a Conditional Use Permit and Site Plan Review for the development of a new integrated, warehouse/light industrial/retail office development on an approximately 89.5-acre property located at the northwest corner of Dos Reis Rd and Manthey Road (the "warehouse site", or "project site").

The proposed Warehouse Project includes an approximately 1,486,607 square foot single or multi-tenant building with a mix of retail, office/call center, and warehouse and distribution uses. The primary mix of uses within the Project building include an up to 110,000 square foot retail showroom, a 24,000 square foot, 2-3 story office space consisting of call center and a regional office. Warehouse and distribution uses will comprise the balance of the 1,352,347 square feet. The proposed building's height is approximately 50 feet, with architectural features that may extend to approximately 60 feet.

The proposed Warehouse Project would generate up to 1,295 employees. There are three types of employment in this project; warehouse, office, and retail. It is expected that the warehouse use will generate 1,143 new employees, the office use will generate 98 employees, and the retail use will generate 54 employees.

Warehouse Site Access and Circulation: The site plan (included on Figure 3) orients the Warehouse Project to Manthey Rd. Public access to the Warehouse Site will be provided via Manthey and Dos Reis Roads in the locations shown on the site plan. These points of access and internal circulation provide access to users, employees, and customers. Generous landscaping along Dos Reis effectively screens the south elevation from Dos Reis Rd, while dense landscape accents the east elevation and the retail portion of the Warehouse Project.

Dedicated truck access located at the very northeast corner of the Warehouse Site is the only access point for ingress and egress of truck traffic. Trucks are restricted from going south of this access point and will come from and to the north towards the Roth Road/Interstate 5 (I-5) interchange only. Vehicular & Truck access to the Warehouse Site is proposed via four (4) access drives; one (1) access drive on Manthey Rd at the far northeast corner is dedicated for truck ingress/egress onto and from the Project. One (1) public and employee vehicular access mid-block on Manthey Rd is proposed for ingress/egress of the public and employees' access to the retail and office. Two (2) additional access points are proposed along Dos Reis Rd with the most eastern access proposed for public vehicular access to the retail and customer pick-up areas located at the southeast corner of the building. A fourth and final access is closed (gated) to the public and trucks and is reserved only for emergency vehicle access.

The Warehouse Project site plan identifies approximately 2,046 parking spaces provided throughout the development, 942 of which are proposed automobile spaces and 1,104 of which are proposed trailer parking spaces. Parking for trucks and employees is provided behind secured, gated access points as depicted on the site plan. Approximately 1,104 trailer parking spaces are provided behind secured, gated access points.

The proposed Warehouse Project is expected to generate 2,798 daily trips, including 203 a.m. peak hour trips (124 inbound, 79 outbound) and 255 p.m. peak hour trips (110 inbound, 145 outbound) for passenger vehicles, and is expected to generate 680 daily truck trips including 95 a.m. peak hour trips and 45 p.m. peak hour trips. Parking will include 943 vehicle spaces, and 1,104 trailer spaces/stalls.

Site Improvements: The developer will be required to widen Dos Reis Road and Manthey Road to their ultimate condition and in accordance with the Central Lathrop Specific Plan Phase 2 Amendment (CLSP 2). Landscape and sidewalk improvements beyond the back of curb along the southern portion of Dos Reis Road will be constructed by future developers of the adjacent properties.

The project proposes a 30-foot landscape buffer along the Dos Reis Road project frontage, in accordance with the Central Lathrop Specific Plan Phase 2 Amendment (CLSP 2). To further enhance screening for trailer parking areas, an 8-foot-tall community wall is proposed along the right-of-way of Dos Reis Road at the project frontage. Additionally, the project proposes an increased number of deciduous trees between the 8-foot paved sidewalk and the 8-foot-tall community wall. This condition will extend along the south boundary of the property until the first driveway east of the proposed Dos Reis Road and Golden Valley Parkway roundabout. Proceeding north along Manthey Road, the tree spacing, and landscape design will transition to a less dense arrangement typically found in retail areas.

Grading and Drainage: The grading and drainage plan for the Property will be required to comply with the City of Lathrop's drainage design standards and the Multi-Agency Post-Construction Stormwater Standards Manual. Storm drainage will be conveyed via internalized roof drains and downspouts, as well as overland flow across the parking lots and truck dock areas. This flow will be directed to curb openings at stormwater quality treatment areas distributed throughout the site. These treatment areas will effectively treat stormwater before it is discharged into the site's storm drain system. Ultimately the onsite storm drain system connects to the existing Watershed 4 storm drain line in Dos Reis Road where that storm water continues west to the existing storm drain pump station at Stanford Crossing and Spartan Way. The stormwater quality treatment areas and the underground storm drainpipe system have been sized to together accommodate a 100-year storm event.

Utilities and Infrastructure: The City of Lathrop will provide water to the Property via a 12-inch public waterline within Golden Valley Parkway. The project proposes new 12-inch public water lines in Manthey Road and Dos Reis Road. The City of Lathrop will provide storm sewer and wastewater treatment service. There is an existing sewer main

within Golden Valley Parkway. It is anticipated that the existing sewer main is to provide a gravity sewer connection to the Property

PROJECT OBJECTIVES

The following are the objectives for the project:

- Implement the 2022 Lathrop General Plan and provide consistency between the General Plan and the CLSP, the Municipal Code, and the Zoning Map.
- Provide a new integrated, high-quality warehouse/light industrial/retail office development.
- Promote improvements that minimize impacts to the city and surrounding areas through master planning and sites design.
- Minimize potential site access and on-site and off-site circulation conflicts between drivers and pedestrians through designated routes and access points suited for the project area.
- Promote economic growth and diverse new employment, shipping, and retail opportunities for Lathrop residents.
- Contribute to the City's tax base.

REQUESTED ENTITLEMENTS AND OTHER APPROVALS

- **Approval of Municipal Code and Zoning Map Amendments:** Amend the Lathrop Zoning Map, modify Title 10 (Vehicles and Traffic), and adopt various amendments to Title 17 (Zoning) of the Lathrop Municipal Code (LMC) for consistency with the 2022 Lathrop General Plan and Government Code Section 65860.
- **Approval of the Central Lathrop Specific Plan 2 Amendment.** The CLSP-2 Amendment includes various land use and development standard updates to bring the CLSP into consistency with the 2022 Lathrop General Plan.
- **Approval of a Conditional Use Permit.** The applicant is requesting a CUP for the development of the Warehouse Project, a new integrated, warehouse/light industrial/ retail and office development on the approximately 89.5-acre property located at the northwest corner of Dos Reis Rd and Manthey Road (Warehouse site).
- **Approval of Site Plan Review:** The Warehouse project is subject to site plan review by the City of Lathrop Planning Commission to ensure consistency with the applicable guidelines and standards for design contained in the 2022 Lathrop General Plan and CLSP Phase 2 Amendment.
- **Adoption of the CEQA Guidelines Section 15183 Exemption.**

The following agencies are considered Responsible or Trustee Agencies for this project, and may be required to issue permits or approve certain aspects of the project;

- Central Valley Regional Water Quality Control Board (CVRWQCB);
- San Joaquin County Multi-Species Habitat Conservation and Open Space Plan (SJMSCP)
- San Joaquin Valley Air Pollution Control District (SJVAPCD)

PREVIOUS ENVIRONMENTAL ANALYSES OF THE PROPOSED PROJECT

On September 19, 2022 the City of Lathrop adopted the 2022 Lathrop General Plan Update and certified the associated General Plan EIR (State Clearinghouse (SCH) #2021100139). The 2022 Lathrop General Plan EIR evaluated cumulative impacts associated with full development and buildout of the General Plan Area, including the proposed CLSP Phase 2 project area and warehouse site.

The proposed project would be consistent with the 2022 Lathrop General Plan's designation of Limited Industrial for the CLSP Phase 2 Project area and the warehouse site. Additionally, the 2022 Lathrop General Plan EIR assumed full development and buildout of the CLSP Phase 2 Area (inclusive of the warehouse site) with the types of uses and development standards proposed by the project. As such the cumulative impacts associated with buildout of the General Plan, including the CLSP Phase 2 area and warehouse project site, were fully addressed in the General Plan EIR.

CEQA GUIDELINES SECTION 15183 EXEMPTIONS

CEQA Guidelines Section 15183 allows a streamlined environmental review process for projects that are consistent with the densities established by existing zoning, community plan or general plan policies for which an EIR was certified. As noted above, the proposed project is consistent with the 2022 Lathrop General Plan land use designations and densities applicable to the project area. The provisions contained in Section 15183 of the CEQA Guidelines are presented below.

15183. Projects Consistent with a Community Plan or Zoning

(a) CEQA mandates that projects which are consistent with the development density established by existing zoning, community plan, or general plan policies for which an EIR was certified shall not require additional environmental review, except as might be necessary to examine whether there are project-specific significant effects which are peculiar to the project or its site. This streamlines the review of such projects and reduces the need to prepare repetitive environmental studies.

(b) In approving a project meeting the requirements of this section, a public agency shall limit its examination of environmental effects to those which the agency determines, in an initial study or other analysis:

- (1) Are peculiar to the project or the parcel on which the project would be located,*
- (2) Were not analyzed as significant effects in a prior EIR on the zoning action, general plan, or community plan, with which the project is consistent,*
- (3) Are potentially significant off-site impacts and cumulative impacts which were not discussed in the prior EIR prepared for the general plan, community plan or zoning action, or*
- (4) Are previously identified significant effects which, as a result of substantial new information which was not known at the time the EIR was certified, are determined to have a more severe adverse impact than discussed in the prior EIR.*

(c) If an impact is not peculiar to the parcel or to the project, has been addressed as a significant effect in the prior EIR, or can be substantially mitigated by the imposition of uniformly applied development policies or standards, as contemplated by subdivision (e) below, then an additional EIR need not be prepared for the project solely on the basis of that impact.

(d) This section shall apply only to projects which meet the following conditions:

(1) The project is consistent with:

- (A) A community plan adopted as part of a general plan,*
- (B) A zoning action which zoned or designated the parcel on which the project would be located to accommodate a particular density of development, or*
- (C) A general plan of a local agency, and*

(2) An EIR was certified by the lead agency for the zoning action, the community plan, or the general plan.

(e) This section shall limit the analysis of only those significant environmental effects for which:

- (1) Each public agency with authority to mitigate any of the significant effects on the environment identified in the planning or zoning action undertakes or requires others to undertake mitigation measures specified in the EIR which the lead agency found to be feasible, and*
- (2) The lead agency makes a finding at a public hearing as to whether the feasible mitigation measures will be undertaken.*

(f) An effect of a project on the environment shall not be considered peculiar to the project or the parcel for the purposes of this section if uniformly applied development policies or standards have been previously adopted by the City or county with a finding that the development policies or standards will substantially mitigate that environmental effect when applied to future projects, unless substantial new information shows that the policies or standards will not substantially mitigate the environmental effect. The finding shall be based on substantial evidence which need not include an EIR. Such development policies or standards need not apply throughout the entire City or county, but can apply only within the zoning district in which the project is located, or within the area subject to the community plan on which the lead agency is relying. Moreover, such policies or standards need not be part of the general plan or any community plan, but can be found within another pertinent planning document such as a zoning ordinance. Where a City or county, in previously adopting uniformly applied development policies or standards for imposition on future projects, failed to make a finding as to whether such policies or standards would substantially mitigate the effects of future projects, the decision-making body of the City or county, prior to approving such a future project pursuant to this section, may hold a public hearing for the purpose of considering whether, as applied to the project, such standards or policies would substantially mitigate the effects of the project. Such a public hearing need only be held if the City or county decides to apply the standards or policies as permitted in this section.

(g) Examples of uniformly applied development policies or standards include, but are not limited to:

- (1) Parking ordinances.*
- (2) Public access requirements.*
- (3) Grading ordinances.*
- (4) Hillside development ordinances.*
- (5) Flood plain ordinances.*
- (6) Habitat protection or conservation ordinances.*
- (7) View protection ordinances.*
- (8) Requirements for reducing greenhouse gas emissions, as set forth in adopted land use plans, policies, or regulations.*

(h) An environmental effect shall not be considered peculiar to the project or parcel solely because no uniformly applied development policy or standard is applicable to it.

(i) Where the prior EIR relied upon by the lead agency was prepared for a general plan or community plan that meets the requirements of this section, any rezoning action consistent with the general plan or community plan shall be treated as a project subject to this section.

- (1) "Community plan" is defined as a part of the general plan of a City or county which applies to a defined geographic portion of the total area included in the*

general plan, includes or references each of the mandatory elements specified in Section 65302 of the Government Code, and contains specific development policies and implementation measures which will apply those policies to each involved parcel.

(2) For purposes of this section, “consistent” means that the density of the proposed project is the same or less than the standard expressed for the involved parcel in the general plan, community plan or zoning action for which an EIR has been certified, and that the project complies with the density-related standards contained in that plan or zoning. Where the zoning ordinance refers to the general plan or community plan for its density standard, the project shall be consistent with the applicable plan.

(j) This section does not affect any requirement to analyze potentially significant offsite or cumulative impacts if those impacts were not adequately discussed in the prior EIR. If a significant offsite or cumulative impact was adequately discussed in the prior EIR, then this section may be used as a basis for excluding further analysis of that offsite or cumulative impact.

PROJECT-SPECIFIC ENVIRONMENTAL REVIEW

The attached Environmental Analysis includes a discussion and analysis of any peculiar or site-specific environmental impacts associated with adoption of the Municipal Code and Zoning Map Update, adoption of the CLSP Phase 2 Amendment, and construction and operation of the proposed warehouse project.

The Environmental Analysis identifies whether or not each CEQA Appendix G environmental checklist question, and its corresponding impacts, were adequately addressed in the 2022 Lathrop General Plan EIR, if there is a significant impact due to new information, or if the project would result in a significant impact peculiar to the project site that was not adequately addressed in the General Plan EIR. The Environmental Analysis identifies the applicable City of Lathrop development standards and policies that would apply to the proposed project during both the construction and operational phases, identifies applicable minimization measures from the General Plan EIR that must be implemented, identifies applicable state-level standards and requirements, and explains how the application of these uniformly applied standards and policies would ensure that no peculiar or site-specific environmental impacts would occur. Examples of uniformly applied standards and requirements include, but are not limited to, compliance with the California Building Code (to reduce impacts associated with seismic hazards) and preparation of a Stormwater Pollution Prevention Plan (to reduce impacts associated with surface water pollution during construction activities).

FUTURE DEVELOPMENT WITHIN THE CLSP PHASE 2 AREA.

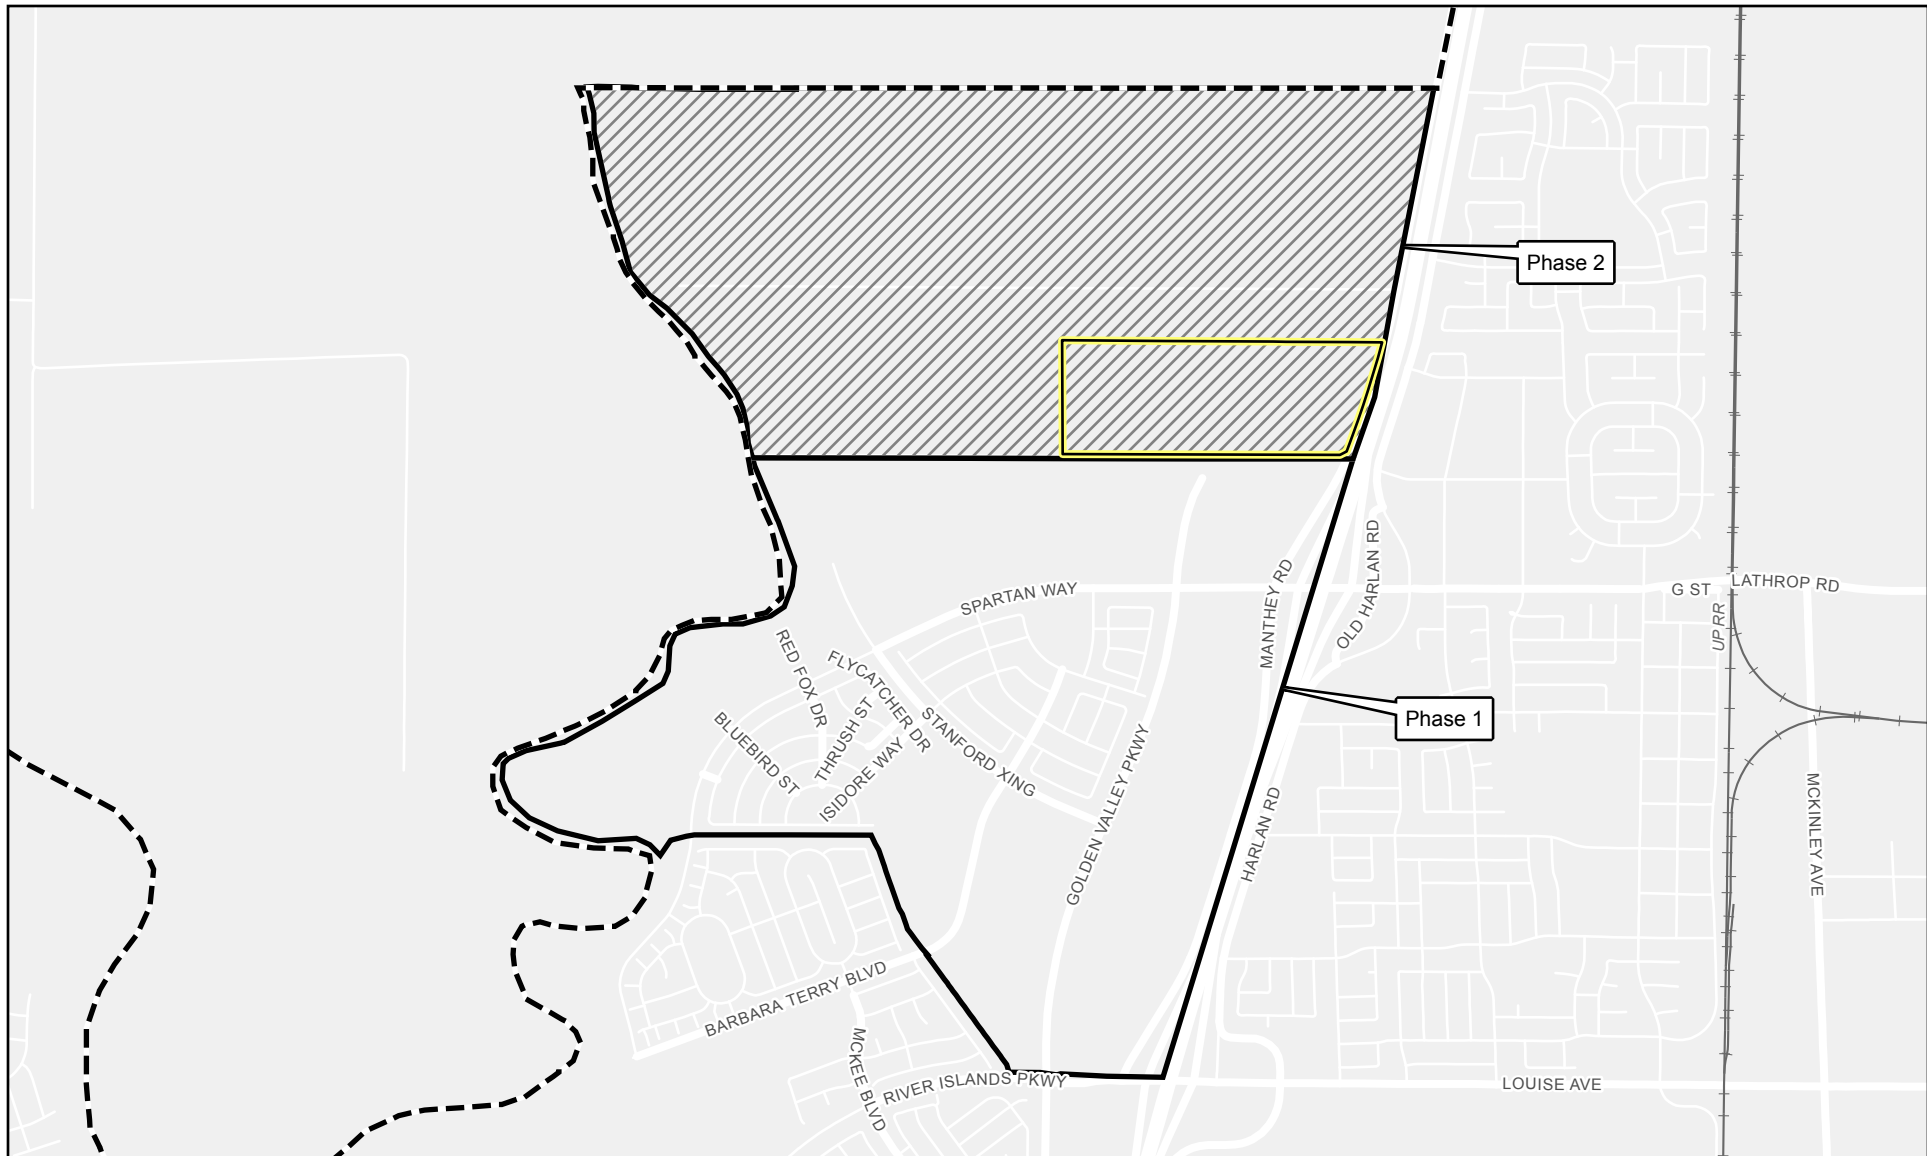

As described previously, prior to any future development within the CLSP-2, beyond the Ashley Warehouse project analyzed in this report, a site-specific development application would be required. At that point, based on the details of a specific project, traffic and other utility analyses would be performed to identify appropriate requirements, or mitigation measures and conditions of approval.

CONCLUSION

As described above, the proposed projects (project) are consistent with the land uses and development intensities assigned to the project site by the General Plan. Impacts from buildout of the General Plan including cumulative impacts associated with development and buildout of the CLSP Phase 2 plan area and the warehouse Project site, as proposed, were fully addressed in the General Plan EIR (State Clearinghouse No. 2021100139), and implementation of the proposed project would not result in any new or altered impacts beyond those addressed in the General Plan EIR.

The analysis in the attached CEQA Environmental Checklist demonstrates that there are no site-specific or peculiar impacts associated with the project, and identifies uniformly applied standards and policies that would be applied to the project. The Project Requirements identified in the attached environmental analysis include requirements that must be implemented by the proposed project in order to ensure that any site-specific impacts or construction-related impacts are not significant. All Project Requirements identified in the attached Environmental Checklist shall be made a condition of project approval and shall be implemented within the timeframes identified. In addition, the project would also be subject to all applicable requirements identified under the General Plan and EIR.

ENVIRONMENTAL CHECKLIST

I. AESTHETICS -- WOULD THE PROJECT:

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Have a substantial adverse effect on a scenic vista?			X	
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?			X	
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with the applicable zoning and other regulations governing scenic quality?			X	
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			X	

RESPONSES TO CHECKLIST QUESTIONS

Response a): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE

A scenic vista is an area that is designated, signed, and accessible to the public for the express purposes of viewing and sightseeing. This includes any such areas designated by a federal, State, or local agency. Federal and State agencies have not designated any such locations within the City of Lathrop for viewing and sightseeing.

While Lathrop contains numerous areas and viewsheds with scenic value, there are no officially designated scenic vista points in Lathrop. Therefore, implementation of the proposed project would not result in substantial adverse effects on a scenic vista.

Implementation of the proposed project would introduce new commercial and limited industrial uses to the project area, and would be consistent with the surrounding uses anticipated by the 2022 General Plan and analyzed in Chapter 3.1 of the 2022 General Plan EIR. As such, the proposed project is consistent with the adopted vision and uses identified within the General Plan, and would not result in any new or increased impacts beyond those that were already addressed in the General Plan EIR. There are no peculiar site specific conditions that would result in a significant impact related to this topic.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in Chapter 3.1 of the EIR. The proposed project would not result in a new or substantially more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

As described previously, there are no scenic vistas located on or adjacent to the project area. The proposed project uses included in the CLSP Phase 2 Amendment and Municipal Code Update are consistent with the surrounding land uses and designations, and the uses anticipated by the 2022 Lathrop General Plan.

The 2022 Lathrop General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the prior EIR because there are no scenic vistas affected by development within the CLSP-2 Amendment area or in the City subject to the changes in land use designations and rezoning. The proposed project would not result in a new or substantially more severe impact than what was previously analyzed.

Response b): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE

As discussed in Chapter 3.1 of the General Plan EIR, no adopted State scenic highways are located in Lathrop. Only one highway section in San Joaquin County is listed as a Designated Scenic Highway by the Caltrans Scenic Highway Mapping System; the segment of Interstate 580 from Interstate 5 to Interstate 205 (generally located southwest of the City of Tracy). This route traverses the edge of the Coast Range to the west and Central Valley to the east. However, this officially designated scenic highway does not provide views of Lathrop or the immediate surrounding areas, and there are no sections of highway in the Lathrop vicinity eligible for Scenic Highway designation.

Given that no adopted State scenic highways are located within Lathrop or provide views of the Project site, no impact would occur. It is further noted that there are no scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings located on the Warehouse site that could potentially be impacted by the proposed project. The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

As described in the General Plan EIR, there are no officially designated scenic highways located in the vicinity of Lathrop. Given that no adopted State scenic highways are located within Lathrop or provide views of the Project area, no impact would occur. The General Plan EIR determined that this impact was less than significant. This impact was

adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

Response c): Adequately addressed in General Plan EIR.

WAREHOUSE SITE:

CEQA Guidelines Section 15387 defines an urbanized area as a central city or a group of contiguous cities with a population of 50,000 or more, together with adjacent densely populated areas having a population density of at least 1,000 persons per square mile. The Project Area consists of lands in the northern portion of the City of Lathrop, which is an urbanized area. The project site is located in an area predominately containing developed uses and roadways to the south and east, and, and agricultural uses to the north and west.

As described in the General Plan EIR, implementation of the General Plan would lead to new and expanded urban and suburban development throughout the city, particularly in areas designated for residential, commercial, professional, industrial, mixed use, and public/ quasi-public uses by the Land Use Map (DEIR Figure 2.0-2). Policies in the General Plan are intended to complement and further the intent of these provisions regulating scenic quality and resources, and any development occurring under the General Plan would be subject to compliance with these guidelines, as well as the applicable regulations set forth in the Lathrop Municipal Code. The General Plan includes policies and actions to promote land use compatibility, ensure that new development is consistent with design guidelines and compatible with surrounding uses, protect and conserve open space, agricultural, riparian habitats, and other scenic and natural resources, ensure that in-fill development is designed to be sensitive to surrounding uses, and to strengthen the qualities of the city's neighborhoods, districts, and downtown. The City's Zoning Ordinance (City of Lathrop Municipal Code Title 17) is the primary tool meant to implement the General Plan. It consists of a zoning map defining the location of districts and code sections detailing requirements for each district. The Zoning Ordinance establishes specific, enforceable standards with which development must comply such as minimum lot size, maximum building height, minimum building setback, and a list of allowable uses. Zoning applies lot-by-lot, whereas the General Plan has a community-wide perspective. Provisions pertaining to visual resources such as site-specific design standards, preservation of open space, landscaping, trees, and signs, are addressed. State law requires the City's Zoning Code to be consistent with the General Plan.

As noted above under the Project Description, the project proposes a 30-foot landscape buffer along the Dos Reis Road project frontage, in accordance with the CLSP-2 Amendment. To further enhance screening for trailer parking areas, an 8-foot-tall community wall is proposed along the right-of-way of Dos Reis Road at the project

frontage. Additionally, the project proposes an increased number of deciduous trees between the 8-foot paved sidewalk and the 8-foot-tall community wall. This condition will extend along the south boundary of the property until the first driveway east of the proposed Dos Reis Road and Golden Valley Parkway roundabout. These perimeter improvements will provide visual screening of the project site and further reduce the potential for visual impacts to occur.

The General Plan EIR determined that this impact would be less than significant. The project is consistent with the General Plan's Limited Industrial land use designation. As such, the proposed project is consistent with the adopted vision and uses identified within the General Plan, and would not result in any new or substantially greater impacts associated with visual resources, beyond those that were already addressed in the General Plan EIR.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

The proposed CLSP Phase 2 amendment and Municipal Code updates are intended to bring each document into consistency with the City's General Plan, and would therefore not degrade the existing visual character or quality of public views beyond what was previously analyzed in the City's General Plan EIR. The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the General Plan EIR in Chapter 3.1. The proposed project would not result in a new or more severe impact than what was previously analyzed because it would allow for development types, densities, and intensities that are fully consistent with the analysis and assumptions used in the General Plan EIR.

Response d): Adequately addressed in General Plan EIR.

WAREHOUSE SITE:

The proposed project will create new sources of light and glare. Examples of lighting would include construction lighting, exterior building lighting, interior building lighting, and automobile and parking lighting. Examples of glare would include reflective building materials and automobiles. Development of the project site would be subject to all applicable local regulations and standards related to lighting.

The Project is required to be consistent with the General Plan, as well as lighting and design requirements in the City of Lathrop Municipal Code Title 17. Additionally, improvements to the warehouse site such as landscape and street lighting, are subject to Site Plan and Architectural Design Review. Design Review procedures will be conducted in compliance with 17.100 and 17.104 of the Lathrop Municipal Code. Additionally, as described in the Central Lathrop Specific Plan Phase 2 Amendment, all lighting should utilize cut-off type fixture to minimize visibility from adjacent areas and should be the appropriate size and height given the activities for which they are designed. Compliance

with these uniformly applied standards and requirements would ensure minimal light spillage from the warehouse site and would ensure that warehouse project impacts related to lighting and glare would be less than significant.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed warehouse project would not result in a new or substantially more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

The proposed CLSP-2 Amendment and Zoning Code updates are intended to bring each plan into consistency with the City's General Plan. All future development within the CLSP-2 area would be required to be consistent with the General Plan, as well as lighting and design requirements in the City of Lathrop Municipal Code Title 17. Additionally, improvements such as landscape and street lighting, are subject to Site Plan and Architectural Design Review. Design Review procedures would be required to be conducted in compliance with 17.100 and 17.104 of the Lathrop Municipal Code. Additionally, as described in the Central Lathrop Specific Plan Phase 2 Amendment, all lighting should utilize cut-off type fixture to minimize visibility from adjacent areas and should be the appropriate size and height given the activities for which they are designed.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The CLSP-2 Amendment and the Zoning Code Update would not result in a new or substantially more severe impact than what was previously analyzed in the General Plan EIR.

II. AGRICULTURE AND FOREST RESOURCES: WOULD THE PROJECT:

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?			X	
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?			X	
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 1222(g)) or timberland (as defined in Public Resources Code section 4526)?			X	
d) Result in the loss of forest land or conversion of forest land to non-forest use?			X	
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?			X	

RESPONSES TO CHECKLIST QUESTIONS

Response a): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE

As shown in Lathrop General Plan EIR Figure 3.2-1. (Important Farmlands) the warehouse site is not underlain by soils that are considered Prime Farmland, Unique Farmland, or Farmland of Statewide Importance by the California Department of Conservation, Farmland Mapping and Monitoring Program and the USDA Soil Conservation Service. Portions of the site are identified as Farmland of Local Importance.

The proposed warehouse project is consistent with the adopted vision and uses identified within the General Plan for light industrial development, and would not result in any new or substantially greater impacts beyond those that were already addressed in the General Plan EIR. Furthermore, the proposed warehouse project would contribute fees toward the purchase of conservation easements on agricultural lands through the City’s agricultural mitigation fee program and the SJMSCP as a result in the conservation of farmland as discussed further below.

The General Plan EIR determined that the loss of agricultural resources was a significant and unavoidable impact. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

According to the California Department of Conservation Farmland Mapping and Monitoring Program, the CLSP Phase 2 area includes lands designated as: Prime Farmland, Farmland of Statewide Importance, and Unique Farmland as shown in Lathrop General Plan EIR Figure 3.2-1. Development of the Phase 2 Plan Area with light industrial uses and the subsequent removal of farmland was evaluated in the General Plan EIR. The General Plan EIR (EIR) determined that this impact was significant and unavoidable. The proposed CLSP Phase 2 Amendment and Zoning Code Update would not result in a new or substantially more severe impact than what was previously analyzed in the 2022 General Plan EIR.

The City of Lathrop adopted an agricultural mitigation program that includes the City's agricultural land mitigation requirements. In order to mitigate and offset the loss of agricultural and important farmland resources, the City requires that applicants pay an agricultural mitigation fee for those projects that permanently change agricultural land over one acre in size within the City's jurisdiction to non-agricultural uses. The in lieu fee, paid to the City, is placed in a trust account and used for farmland mitigation purposes. Additionally, the SJMSCP provides for the preservation of productive agriculture and is administered by the San Joaquin Council of Governments (SJCOG). In conformance with the SJMSCP, the General Plan recognizes that agricultural use in the CLSP Phase 2 Plan Area would be phased out as the Plan Area develops with industrial uses and requires that project applicants pay fees to SJCOG on a per-acre basis for designated agricultural lands that are converted to urban use. SJCOG will then use these funds to purchase conservation easements on agricultural and habitat lands in the project vicinity.

Project Requirement(s)

Requirement AG-1: *Implement Lathrop Municipal Code Chapter 3.40 AGRICULTURAL MITIGATION FEE Section 3.40.030 Collection of Agricultural Mitigation Fee.*

The Agricultural Mitigation Fee enacted pursuant to this chapter is to be collected by the city before the issuance of building permits, or at approval of any discretionary permit if no building permit is required. (Ord. 05-248 § 1)

Requirement AG-2: *Require all development to coordinate with and participate with SJCOG in the SJMSCP Agricultural Mitigation Fee program as required.*

Response b): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE

As shown in the Lathrop General Plan EIR Figure 3.2-2, the warehouse site is not under a Williamson Act contract, or designated by the General Plan or Zoning Maps for agricultural uses. Therefore, implementation of the proposed project would not conflict with a Williamson Act Contract, and would not conflict with any agricultural zoning.

The proposed warehouse project is consistent with the adopted vision and uses identified in the General Plan, and would not result in a new or substantially more severe impact than what was previously analyzed in the 2022 General Plan EIR.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

The CLSP-2 plan area is not under a Williamson Act Contract, nor are any of the parcels immediately adjacent to the CLSP plan area under a Williamson Act Contract, or designated by the General Plan or Zoning Maps for agricultural uses. None of the parcels being updated on the Zoning Map are under Williamson Act Contract. Therefore, implementation of the proposed project would not conflict with a Williamson Act Contract, and would not conflict with any agricultural zoning.

The proposed CLSP-2 Amendment and the Zoning Code Update project is consistent with the adopted vision and uses identified within the General Plan, and would not result in a new or substantially more severe impact than what was previously analyzed in the 2022 General Plan EIR.

Responses c) and d): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE, CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

As described in the General Plan EIR, the City of Lathrop does not contain parcels designated as forest land and the General Plan does not propose uses that would convert existing forest land to non-forest use. Therefore, the Project would result in no impact regarding the loss of forest land or conversion of forest land to non-forest use.

The proposed Project is consistent with the adopted vision and uses identified within the General Plan, and would not result in a new or substantially more severe impact than what was previously analyzed in the prior EIR.

Response e): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE

As described under Response (a) above, the warehouse site is designated as Farmland of Local Importance. Agricultural uses previously occurred on the warehouse site. However, the site is not currently used for agricultural purposes.

The proposed warehouse project is consistent with the adopted vision and uses identified within the General Plan for light industrial development, and would not result in any new or in a substantial increase in impacts beyond those that were already addressed in the General Plan EIR.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR as discussed above regarding the treatment of agricultural resources. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

Future Development of the CLSP Phase 2 area for urban uses and the subsequent removal of Farmland was evaluated in the General Plan EIR. The General Plan designates the Project area for limited industrial urban land uses. As such, implementation of the CLSP-2 amendment and the Zoning Update would not create new impacts over and above those identified in the General Plan EIR, nor substantially increase previously identified impacts because the same areas proposed to be converted to limited industrial uses in the General Plan would be rezoned and designated in the CLSP-2 for limited industrial uses. However, as described previously under Response a, the Project area consists of land previously used for agricultural purposes, and contains Important Farmland. The Project is therefore subject to compliance with Requirement AG-1 to implement the Lathrop Municipal Code Chapter 3.40 Section 3.40.030 Collection of Agricultural Mitigation Fees. The Agricultural Mitigation Fee enacted pursuant to this chapter is to be collected by the city before the issuance of building permits, or at approval of any discretionary permit if no building permit is required. (Ord. 05-248 § 1). Additionally, the project and all future projects within the CLSP Phase 2 Planning area are also subject to Requirement AG-2: which requires all development to coordinate with and participate with SJCOG in the SJMSCP Agricultural Mitigation Fee program.

The proposed project is consistent with the adopted vision and uses identified within the General Plan, and would not result in any new or substantially greater impacts beyond those that were already addressed in the General Plan EIR.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

III. AIR QUALITY -- WOULD THE PROJECT:

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Conflict with or obstruct implementation of the applicable air quality plan?			X	
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?			X	
c) Expose sensitive receptors to substantial pollutant concentrations?			X	
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?			X	

EXISTING SETTING

The Project site is located within the San Joaquin Valley Air Pollution Control District (SJVAPCD). This agency is responsible for monitoring air pollution levels and ensuring compliance with federal and state air quality regulations within the San Joaquin Valley Air Basin (SJVAB) and has jurisdiction over most air quality matters within its borders.

Response a), b): Adequately addressed in General Plan EIR

WAREHOUSE SITE

Criteria Air Pollutant Emissions - Construction

The SJVAPCD’s approach to analysis of construction impacts is to require implementation of effective and comprehensive control measures, rather than to require detailed quantification of emission concentrations for modeling of direct impacts. PM₁₀ emitted during construction can vary greatly depending on the level of activity, the specific operations taking place, the equipment being operated, local soils, weather conditions, and other factors, making quantification difficult. Despite this variability in emissions, experience has shown that there are a number of feasible control measures that can be reasonably implemented to significantly reduce PM₁₀ emissions from construction activities. The SJVAPCD has determined that, on its own, compliance with Regulation VIII for all sites and implementation of all other control measures indicated in Tables 6-2 and 6-3 of the SJVAPCD’s Guide for Assessing and Mitigating Air Quality Impacts (as

appropriate) would constitute sufficient mitigation to reduce construction PM₁₀ impacts to a level considered less than significant.

Construction of the warehouse project would result in numerous activities that would generate dust. The fine, silty soils in the region and often strong afternoon winds exacerbate the potential for dust, particularly in the summer months. Impacts would be localized and variable. Construction impacts would last for a period of several months to several years. The initial phase of warehouse project construction would involve grading and site preparation activities, followed by building construction. Construction activities that could generate dust and vehicle emissions are primarily related to grading, soil excavation, and other ground-preparation activities, as well as building construction.

Development of the Phase 2 Plan Area with light industrial uses was evaluated in the General Plan EIR. As described in the Lathrop General Plan EIR, all future development and infrastructure projects within the General Plan Planning Area would be subject to the General Plan goals, policies, and actions, which were adopted to reduce emissions and air quality impacts, including during construction. For example, Policy RR-6.3 requires the City to require new construction to minimize fugitive dust and construction vehicle emissions.

Nevertheless, the proposed General Plan includes higher levels and rates of growth than those that would be facilitated under the existing Lathrop General Plan. As such, total emissions levels associated with Project buildout would increase, which may indirectly hinder the SJVAPCDs efforts to reduce total emissions of criteria pollutants. The General Plan EIR (EIR) determined that this impact was significant and unavoidable. The proposed CLSP Phase 2 Amendment and Zoning Code Update would not result in a new or substantially more severe impact than what was previously analyzed in the 2022 General Plan EIR.

In addition, control measures are required and enforced by the SJVAPCD under Regulation VIII. The SJVAPCD considers construction-related emissions from all projects in this region to be mitigated to a less than significant level if SJVAPCD-recommended PM₁₀ fugitive dust rules and equipment exhaust emissions controls are implemented. The proposed project would be required to comply with all applicable measures from SJVAPCD Rule VIII. The proposed project would have a less than significant impact related to construction activities on these potential impacts.

In addition, Table AIR-1 (below) provides the results of the construction-related emissions modeling results from CalEEMod in comparison to the SJVAPCD thresholds for criteria air pollutants. As shown in this table, the construction emissions for the proposed

warehouse project are less than the SJVAPCD thresholds for criteria air pollutants for construction.

Table AIR-1: Project Unmitigated Construction Criteria Pollutant Emissions (tons/year)

<i>Emissions Type</i>	<i>Proposed project Emissions</i>	<i>SJVAPCD Threshold</i>	<i>Above Threshold in Proposed project?</i>
ROG	0.46	10	N
NO _x	4.44	10	N
CO	4.09	100	N
PM ₁₀	1.87	15	N
PM _{2.5}	0.95	15	N
SO _x	0.01	27	N

Source: CalEEMod, v. 2022.1

Criteria Air Pollutant Emissions - Operation

For the purposes of this operational air quality analysis, actions that violate Federal standards for criteria pollutants (i.e., primary standards designed to safeguard the health of people considered to be sensitive receptors while outdoors and secondary standards designed to safeguard human welfare) are considered significant impacts. Additionally, actions that violate State standards developed by the CARB or criteria developed by the SJVAPCD, including thresholds for criteria pollutants, are considered significant impacts.

SJVAPCD Rule 9510 Indirect Source Review

District Rule 9510 requires developers of large residential, commercial and industrial projects to reduce smog-forming (NO_x) and particulate (PM₁₀ and PM_{2.5}) emissions generated by their projects. The Rule applies to many project types, including to projects which, upon full build-out, will include 25,000 square feet of light industrial space or more. Project developers are required to reduce:

- 20 percent of construction-exhaust nitrogen oxides;
- 45 percent of construction-exhaust PM₁₀;
- 33 percent of operational nitrogen oxides over 10 years; and
- 50 percent of operational PM₁₀ over 10 years.

Developers are encouraged to meet these reduction requirements through the implementation of on-site mitigation; however, if the on-site mitigation does not achieve the required baseline emission reductions, the warehouse project applicant will mitigate the difference by paying an off-site fee to the District. Fees reduce emissions by helping to fund clean-air projects in the District. The proposed project would be required to

consult with the SJVAPCD regarding the applicability of Rule 9510 Indirect Source Review including the fees.

Criteria Pollutant Emissions and Thresholds

Project operational emissions are provided in Table AIR-2 (below) (further detail is provided in Appendix A), in comparison to the SJVAPCD criteria pollutant thresholds. As shown below, the proposed warehouse project would not exceed the applicable SJVAPCD thresholds associated with criteria pollutants during warehouse project operation.

Table AIR-2: Project Unmitigated Operational Criteria Pollutant Emissions (tons/year)

<i>Emissions Type</i>	<i>Proposed project Emissions</i>	<i>SJVAPCD Threshold</i>	<i>Above Threshold in Proposed project?</i>
ROG	1.97	10	N
NO _x	1.82	10	N
CO	13.3	100	N
PM ₁₀	2.63	15	N
PM _{2.5}	0.69	15	N
SO _x	0.03	27	N

Source: CalEEMod, v.2022.1

The 2022 Lathrop General Plan EIR determined that cumulative increases in criteria air pollutants associated with General Plan buildout was significant and unavoidable. Consistent with SJVAPCD requirements, the 2022 Lathrop General Plan EIR evaluated air quality impacts associated with buildout of the General Plan and identified two mitigation measures to address significant air quality impacts. Implementing Measure RC-6a requires the review of development, infrastructure, and planning projects for consistency with SJVAPCD requirements during the CEQA review process, with project applicants being required to prepare Air Quality analyses to address SJVAPCD and General Plan requirements. (DEIR page 3.3-37.) Implementing Action RR-6b requires a review of all new industrial and commercial development projects for potential air quality impacts to sensitive receptors, and that mitigation measures and best management practices be implemented to reduce significant emissions of criteria pollutants. Individual projects are required to provide their own environmental assessments to determine health impacts from the construction and operation of their projects. (DEIR pages 3.3-37-3.3-38.)

The warehouse project impact was adequately addressed in the Lathrop General Plan EIR because the EIR evaluated the air quality impacts associated with buildout of the City, including development of Limited Industrial land uses on the warehouse project site. Consistent with the EIR mitigation measures, the warehouse project was evaluated for its specific air quality impacts. Thus, the proposed warehouse project is consistent with

the development assumptions and development intensities analyzed in the General Plan EIR. As such, the proposed warehouse project would not result in a new or substantially more severe impact than what was previously analyzed in the 2022 General Plan EIR.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

Criteria pollutant emissions would occur because of construction equipment used for future development projects within the CLSP Phase 2 area and would include the following: site preparation, grading, paving, building construction, and architectural coating activities associated with development and infrastructure. GHG emissions would also result from worker and vendor trips to and from project sites and from soil hauling trips. Construction activities are short-term and cease to emit greenhouse gases upon completion, unlike operational emissions that are continuous year after year until operation of the use ceases. As such, SJVAPCD recommends in its draft threshold to amortize project-specific construction emissions over a 30-year operational lifetime of a project. This normalizes construction emissions so that they can be grouped with operational emissions to generate a precise project GHG inventory. However, the SJVAPCD does not have a current threshold of significance for construction-related GHG emissions for plan-level impacts (including General Plans and Specific Plans).

The 2022 RTP/SCS relied upon the existing Lathrop General Plan to determine population, employment, and VMT increases associated with General Plan buildout in Lathrop as part of the RTP/SCS's overall analysis of per capita GHG emissions throughout the region. As noted in the 2022 RTP/SCS, the Plan meets and exceeds the GHG targets established by the CARB. The Lathrop General Plan is supportive and complimentary of the policies and strategies included in the 2022 RTP/SCS, and does not conflict with implementation of this plan.

The 2022 Lathrop General Plan EIR determined that this impact was significant and unavoidable. This impact was adequately addressed in the EIR. The proposed CLSP-2 amendment and Zoning Code Update project would not result in a new or substantially more severe impact than what was previously analyze in the 2022 General Plan EIR.

Project Requirement(s)

Requirement AQ-1: Comply with SJVAPCD Rule 9510 Indirect Source Review

Requirement AQ-2: Comply with SSJVAPCD Regulation VIII for all sites and implementation control measures indicated in Tables 6-2 and 6-3 of the SJVAPCD's Guide for Assessing and Mitigating Air Quality Impacts.

Response c): Adequately addressed in General Plan EIR.

WAREHOUSE SITE

As previously discussed, warehouse project emissions would be less than significant and would not exceed Air District thresholds; refer to Table AIR-1 and Table AIR-2, above. The potential for the proposed warehouse project to expose sensitive receptors to substantial pollutant concentrations is analyzed below. A project-specific Health Risk Assessment (HRA) was prepared to assess potential public health risks that may be present at the proposed warehouse project in the City of Lathrop, San Joaquin County, California. This report analyzes the emissions of toxic air pollutants attributable to the project, and their impacts on public health. The HRA was prepared to meet the requirements established by the SJVPACD, including the Framework for Performing Health Risk Assessments, and Guidance for Air Dispersion Modeling. The HRA is included as Attachment G.

Toxic Air Contaminants

A toxic air contaminant (TAC) is defined as an air pollutant that may cause or contribute to an increase in mortality or in serious illness, or that may pose a hazard to human health. TACs are usually present in minute quantities in the ambient air. However, their high toxicity or health risk may pose a threat to public health even at very low concentrations. In general, for those TACs that may cause cancer, there is no concentration that does not present some risk. This contrasts with the criteria pollutants for which acceptable levels of exposure can be determined and for which the state and federal governments have set ambient air quality standards.

The proposed warehouse project has the potential to impact nearby sensitive receptors due to the generation of heavy-duty diesel truck trips during warehouse project operation. Heavy-duty diesel trucks are emitters of diesel particulate matter (DPM), which is emitted from on- and off-site truck vehicle circulation, as well as idling on-site. Combined, these sources have the potential to generate substantial TACs on nearby sensitive receptors, including those located nearest to the warehouse project site, such as Lathrop High School.

The significance criteria for TACs, based on guidance from the SJVPACD, is provided in Table AIR-3, below.

Table AIR-3: Thresholds of Significance for Public Health Risks

Risk Metric	Significance Threshold
Residential Cancer Risk	20 per million
Workplace Cancer Risk	20 per million
Chronic and Acute non-cancer hazard Indices	non-cancer health hazard exposure index of 1.0

SOURCE: SJVAPCD, 2015.

As shown in Table AIR-3, a project that contributes a cancer risk in excess of 20 new cases in a population of one million persons at identified receptors, or a non-cancer hazard index of greater than or equal to 1.0 would be considered to have a significant project-level impact.

Exposure assessment involves translating the emission rate (e.g., lbs/hr, g/hr) of individual toxic air contaminants into the concentration (e.g., grams/cubic meter g /sec m² or parts per million) of each toxic air contaminant. The key step in performing an exposure assessment is the application of an air dispersion model. The dispersion model incorporates the local meteorological data (wind speed, wind direction, local temperature, inversions, etc.), stack height, and exhaust flow characteristics, into the dispersion of individual air contaminant.

Modeling receptors were placed at locations of nearby sensitive receptors, including residential and workplace locations. Residential receptors were located at each of the nearby residential receptors, as previously described, as follows:

- A cluster of residences is located adjacent to the southwest portion of the warehouse project site, on the opposite side of Dos Reis Road;
- Several residences are located north of and adjacent to Lathrop High School (approximately 940 feet west of the warehouse project site);
- A rural residence is located northwest of the Project site (approximately 820 feet from the Project site);
- A cluster of residences is located north of the northeast portion of the warehouse project site (approximately 320 feet from the warehouse project site), as well as additional residences located along Manthey Road north of the warehouse project site;
- A large number of residences is located along the opposite side of Interstate 5, east of the warehouse project site (approximately 400 feet east and northeast of the warehouse project site).

Additionally, workplace receptors were placed at various locations within the warehouse project site. This allows for an analysis of the receptors that have the potential to be most affected by the TACs generated by the proposed warehouse project.

Once the emissions rates of individual air contaminants have been calculated, and an air dispersion model has been run through AERMOD, the next step in determining health risks is to determine the cancer risk, and acute and chronic incident rates. Period and 1-hour dispersion files were used in combination with HARP-2 risk modelling software to calculate risk scenarios for residential, and workplace cancer rates, as well as acute and chronic incidences. The Hotspots Analysis and Reporting Program (HARP) is a software suite used to assist with the programmatic requirements of the Air Toxics “Hot Spots” Program [Assembly Bill (AB) 2588]. HARP combines the tools needed to implement the requirements of AB 2588, such as reporting a facility’s emissions inventory, determining a facility’s prioritization score, conducting air dispersion modeling, and performing a facility health risk assessment. This study utilized the HARP-2 Air Dispersion and Risk Tool with dispersion plot files created in AERMOD. After the risk assessment was complete, HARP-2 plot files were then imported back into AERMOD for spatial and visual representation, and analysis of impact areas.

Risk Assessment Results

The results of the risk analysis indicate that cancer risks vary depending on the exposure scenario (residential or worker) and on location. As would be expected, locations nearest the warehouse project site have the greatest exposure and the associated risks are considerably lower as distance from the project site increases. Table AIR-4 displays the residential and workplace cancer risk, and acute and chronic incidence rate results at nearest receptors. Further detail can be found in Attachment G.

Table AIR-4: Summary of Maximum Health Risks

<i>RISK METRIC</i>	<i>MAXIMUM RISK</i>	<i>SIGNIFICANCE THRESHOLD</i>	<i>IS THRESHOLD EXCEEDED?</i>
Residential Cancer Risk (70-year exposure)	7.0	20 per million	No
Workplace Cancer Risk (40-year exposure)	1.3	20 per million	No
Chronic (non-cancer)	<0.01	Hazard Index ≥1	No
Acute (non-cancer)	0	Hazard Index ≥1	No

SOURCES: AERMOD 11.2.0 (LAKES ENVIRONMENTAL SOFTWARE, 2023); AND HARP-2 AIR DISPERSION AND RISK TOOL.

The TAC emissions from the warehouse project result from the on-site and off-site truck travel, and on-site idling of diesel-fueled vehicles. The nearest sensitive receptors are those that surround the warehouse project site, to the southwest, west, east, and northeast.

Overall, the results show that residential 70-year cancer risk would remain below the threshold of 20 in a million at areas for residential receptors located near the warehouse

project site. The wind patterns in the area generally blow from the northwest to the southeast. The modeling results show that the residence with the highest risk is the residence located north of the warehouse project site along Manthey Road, at 12965 Manthey Road. However, it is very unlikely any individual would remain at the same location for 70 years; therefore, this result represents a conservative estimate. Figure 4 provides a visualization of the residential cancer risk isopleths surrounding the warehouse project site.

The results also show that 40-year workplace cancer risk would remain below the threshold of 20 in a million (the SJVPACD threshold) at the warehouse project site, with a maximum value measured at approximately 1.3 per million (at the location of maximum cancer risk), in the northeastern portion of the warehouse project site. Separately, chronic or long-term exposures and acute exposure to DPM can result in non-cancer health effects. Chronic and Acute Non-Cancer Hazards results show that the acute and chronic risk on and near the project site would remain below the hazard index of ≥ 1 . As described above, the proposed warehouse project would not generate significant emissions of toxic air contaminants and would not result in substantial pollutant concentrations.

The 2022 Lathrop General Plan EIR determined that implementation and full buildout of the General Plan could result in significant and unavoidable impacts associated with exposing sensitive receptors to substantial pollutant concentrations. The proposed warehouse project is consistent with the uses and non-residential development intensities analyzed in the 2022 General Plan EIR. As such, the warehouse project's cumulative contribution to this impact was accounted for in the General Plan EIR. The analysis contained in the project-specific HRA (Attachment G) demonstrates that the proposed project would not exceed any applicable thresholds of significance for pollutant concentrations. As such, the warehouse project would not result in a significant site-specific impact peculiar to the project or the site. This impact was adequately addressed in the EIR. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

It is further noted that the General Plan Action LU-5.d requires the implementation of best management practices (BMPs) for warehouse projects located within 1,000 feet of existing or planned residential uses or other sensitive receptors. Action LU-5.d includes several examples of the types of BMPs that may be appropriate on a project-by-project basis. This General Plan action, and the corresponding BMPs, were based on guidance provided by the California Attorney General Office's publication: *Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act*. The proposed warehouse project has implemented the recommendations and BMPs noted in Action LU-5.d, including ample setbacks and vegetative buffers,

adequate onsite parking to prevent truck idling on public streets, orienting truck ingress/egress points away from sensitive receptors, screening dock doors from sensitive receptors, and integrating clear signage for truck routes and ingress/egress routes.

While the General Plan EIR determined that full buildout of the Lathrop General Plan could lead to significant and unavoidable impacts associated with exposure of sensitive receptors to substantial pollutant concentrations, the proposed warehouse project has implemented all of the required best practices to reduce this potential project-level impact to a less than significant level, as explained in greater detail above.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

The proposed CLSP Phase 2 amendments and municipal and zoning amendments are intended to provide consistency with the General Plan. As such, the CLSP-2 Amendment and Zoning Code Update are consistent with the adopted vision and uses identified within the General Plan, and would not result in any new or increased impacts beyond those that were already addressed in the General Plan EIR. No additional development is proposed, or would be approved at this time. Any future projects proposed within the CLSP Phase 2 Project area would be reviewed for project-specific air toxics health impacts and individual project health risk assessments would be conducted for individual projects that have the potential to generate a significant level of TACs.

The General Plan EIR determined that this impact was significant and unavoidable. The proposed CLSP Phase 2 Project and Zoning Update would not result in a new or substantially more severe impact than what was previously analyzed.

Response d): Adequately addressed in General Plan EIR. Offensive odors rarely cause any physical harm; however, they still can be very unpleasant, leading to considerable distress among the public, and often generate citizen complaints to local governments and regulatory agencies. Major sources of odor-related complaints by the general public commonly include wastewater treatment facilities, landfill disposal facilities, food processing facilities, agricultural activities, and various industrial activities (e.g., petroleum refineries, chemical and fiberglass manufacturing, painting/coating operations, landfills, and transfer stations).

According to the CARB Handbook, some of the most common sources of odor complaints received by local air districts are sewage treatment plants, landfills, recycling facilities, waste transfer stations, petroleum refineries, biomass operations, auto body shops, coating operations, fiberglass manufacturing, foundries, rendering plants, and livestock operations. None of the three project components propose any of the aforementioned uses.

WAREHOUSE SITE

The proposed warehouse project consists of the development of a warehouse building with a footprint of approximately 1,486,607 square feet. Warehouse uses do not typically involve the types of uses that would emit objectionable odors affecting substantial numbers of people. The Project would not include any of the land uses that have been identified by the SJVAPCD as odor sources and operational impacts would be less than significant.

Construction activities associated with the warehouse project may generate detectable odors from heavy-duty equipment exhaust and architectural coatings. However, construction-related odors would be short-term in nature and cease upon completion of the warehouse project. In addition, the Project would be required to comply with the California Code of Regulations, Title 13, Sections 2449(d)(3) and 2485, which minimizes the idling time of construction equipment either by shutting it off when not in use or by reducing the time of idling to no more than five minutes. This would further reduce the detectable odors from heavy-duty equipment exhaust. The Project would also be required to comply with the all applicable SJVAPCD Rule and regulations pertaining odors. Any impacts to existing adjacent land uses would be short-term and are less than significant. Compliance with these rules would ensure that potential odors generated at the project site result in a less than significant impact.

The Lathrop General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed warehouse project would not result in a new or substantially more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

The proposed CLSP Phase 2 amendments and municipal and zoning amendments are intended to provide consistency with the General Plan. As such, the CLSP Phase 2 amendment and zoning update projects are consistent with the adopted vision and uses identified within the General Plan, and would not result in any new or substantially more severe impacts beyond those that were already addressed in the General Plan EIR. No additional development is proposed, or would be approved at this time. Any future projects proposed within the Phase 2 Project area would be reviewed for individual project-specific odor impacts.

The General Plan EIR determined that this impact was less than significant. The proposed CLSP Phase 2 amendments and municipal and zoning amendments would not result in a new or substantially more severe impact than what was previously analyzed.

IV. BIOLOGICAL RESOURCES -- WOULD THE PROJECT:

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?			X	
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?			X	
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?			X	
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?			X	
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?			X	
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?			X	

RESPONSES TO CHECKLIST QUESTIONS

Responses a: Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

Olberding Environmental, Inc. conducted a field reconnaissance survey of the warehouse project site on May 5, 2021, for the purpose of identifying sensitive plant and wildlife species, sensitive habitats, and biological constraints potentially occurring on the warehouse property. The technical report is available in Attachment A.

The U.S. Fish and Wildlife Service (USFWS) Information for Planning and Consultation (IPaC) database, California Natural Diversity Database (CNDDDB), and California Native Plant Society (CNPS) database were queried to create a list of special-status species with the potential to occur on the Property (Attachment 2, Table 2). After the May 5, 2021 site visit it was determined that many of these species had no potential to occur on the warehouse site. A total of nine species were determined to have a low to high potential of occurring on the warehouse site and are discussed in more detail. Due to the largely un-vegetated, ruderal/disturbed annual grassland habitat found on the Property, and the history of soil disturbance, it was determined that there is no potential for any special-status plants to be found on the warehouse site.

An elderberry shrub (*Sambucus* sp.) was identified along the western fence line of the warehouse site. Elderberry is the host plant of the Valley elderberry longhorn beetle (VELB) (*Desmocerus californicus dimorphus*). If the plant can be maintained on the warehouse site, then a 20 foot setback buffer will need to be established around its dripline. If the plant cannot be maintained on the warehouse site, then VELB exit hole surveys will need to be conducted as outlined in the USFWS protocol (USFWS 2017). Whether or not exit holes are identified will determine the required mitigation measures necessary under the SJMSCP (SJCOG 2000).

A total of two special-status reptile species were identified to have a low potential to occur on the warehouse project site. The California glossy snake (*Arizona elegans occidentalis*) and the San Joaquin coachwhip (*Masticophis flagellum*) may occur in a foraging capacity. While both species prefer the dry, open habitat found on the warehouse site for hunting, the regular disturbance of the site diminishes the potential for the species to utilize the warehouse site. Pre-construction surveys should be performed no more than 48 hours prior to ground disturbance or vegetation removal. Surveys would be required to determine presence/absence of these species.

A total of four special-status bird species were identified to potentially occur on the warehouse site in either a nesting or foraging capacity. The burrowing owl (*Athene cunicularia*) has a low potential to occur in a nesting and foraging capacity. The loggerhead shrike (*Lanius ludovicianus*) has a low potential to occur in a foraging capacity only; there is no potential nesting habitat on the warehouse project site. Both the Swainson's hawk (*Buteo swainsoni*) and white-tailed kite (*Elanus leucurus*) were observed foraging on the warehouse site during the May 5, 2021 survey. The Swainson's hawk was observed using a nest immediately adjacent to the Property, across Dos Reis Road. Additionally, two red-tailed hawks (*Buteo jamaicensis*) were observed foraging on the warehouse site during the May 2021 survey. If project construction-related activities such as tree and vegetation removal or grading take place during the nesting season (February through August), preconstruction surveys for nesting passerine birds and raptors are recommended.

No sign of bat use was observed on the warehouse site during the May 2021 survey; however, based on habitat suitability, it was determined that bats have a moderate potential to utilize the site in a foraging capacity. These bat species include pallid bat (*Antrozous pallidus*) and western mastiff bat (*Eumops perotis californicus*). As there is no potential roosting habitat on the warehouse site, no further action needs to be taken.

Four occurrences of special-status plants were identified within a five-mile radius of the point roughly representing the center of the warehouse site (Attachment A). However, it was determined that due to the regular disturbance of habitat present on the site, it is unlikely that any special-status plants will occur on the warehouse site.

Special-status Plants

It was determined that there is no potential for any special status plants to occur on the warehouse site. Due to the ruderal nature of the habitat, the lack of any wetland features, and the long history of regular tilling of the soils, there is no suitable habitat for any special-status plants to occur on the warehouse site. Review of historic CNDDDB records and the site visit conclude that there is no potential for any special-status plants to occur on the warehouse site.

Special-status Wildlife

Special-Status Invertebrates – Given the vegetation that was identified on the warehouse site; VELB has a moderate potential to occur on the warehouse site. A moderately sized, healthy elderberry shrub (host plant for the species) was identified on the western fence line of the warehouse site (Attachment A Figure 11). Additionally, there is one CNDDDB occurrence of this species (#158) located approximately 4.4 miles northwest the warehouse site. The presence of the elderberry shrub on the warehouse site in addition to the recent CNDDDB occurrence within five miles create the potential for VELB to occur on the warehouse site.

Special-Status Amphibians

Due to the lack of any wetland or water features on the warehouse site, there is no potential for any amphibians to occur on the warehouse site.

Special-Status Reptiles

Given the presence of suitable onsite habitat; the California glossy snake and San Joaquin coachwhip have a low potential to occur on the warehouse site. While the warehouse site does provide open, dry habitat for hunting with plenty of mammal burrows, the regular disturbance of the soil would likely preclude the California glossy snake from utilizing the warehouse site for reproduction. Also, while the warehouse site does fall within the range for the San Joaquin coachwhip, all nearby CNDDDB occurrences are found at

approximately 300 feet in elevation or higher, with the nearest occurrence in the Valley floor occurring nearly 100 miles south of the warehouse site. For this reason, the San Joaquin coachwhip has only a low potential to occur on the warehouse site.

Foraging or Nesting Raptor/Passerine Species

A total of four special-status bird species were identified as having a potential to occur on the warehouse site, burrowing owl, Swainson’s hawk, loggerhead shrike, and white-tailed kite. There are numerous ground squirrel and other mammal burrows among several raised berm areas on the warehouse site that could serve as burrows for burrowing owl. However, during the May 2021 survey there were no signs of any burrowing owls among these areas. During the survey, a Swainson’s hawk was observed using a nest approximately 20 feet from the warehouse site, across Dos Reis Road. Due to the presence of the active Swainson’s hawk nest among this small group of trees, it is unlikely that any other raptor or passerine species would nest in this immediate vicinity, and there are no other potential nesting locations on or immediately adjacent to the warehouse site. However, two red-tailed hawks and a white-tailed kite were observed foraging over the warehouse site, and it provides potential foraging habitat for the loggerhead shrike as well as other raptor species. A CNDDDB occurrence of yellow-headed blackbird (*Xanthocephalus xanthocephalus*) (Occurrence #5) intersects with the warehouse site, but it was determined that there is no potential habitat for the species on the warehouse site.

Special-Status Mammals

Given the presence of suitable onsite habitat; the pallid bat and western mastiff bat have a moderate potential to occur on the warehouse site in a foraging capacity. However, due to the lack of any trees or other large structures on the site, there is no potential for any roosting habitat. While the western mastiff bat is a Covered Species under the SJMSCP (SJCOG 2000), all incidental take minimization and mitigation measures involve nursery sites, which are not located on the warehouse site. Therefore, no take authorizations will be needed for these species.

The 2022 Lathrop General Plan includes the following policies and actions to reduce impacts to special status species:

RR-4b: Require new development, infrastructure, long-range planning, and similar projects, to comply with the requirements of the San Joaquin County Multi-Species Habitat Conservation and Open Space Plan to ensure that potentially significant impacts to special-status species and sensitive resources are adequately addressed.

RR-4e: Where sensitive biological habitats have been identified on or immediately adjacent to a project site, the project shall include appropriate mitigation

measures identified by *SJMSCP*, which may include, but are not limited to the following:

- A. Pre-construction surveys for species listed under the State or Federal Endangered Species Acts, or species identified as special-status by the resource agencies, shall be conducted by a qualified biologist;
- B. Construction barrier fencing shall be installed around sensitive resources and areas identified for avoidance or protection, and to reduce potential soil compaction in sensitive areas; and
- C. Pre-Construction training of contractors and sub-contractors shall be conducted by a qualified biologist to identify and avoid protected species and habitat.

Additionally, the following recommendations have been identified and are included in the Biological Resources Analysis Report (Attachment A):

- VELB Buffer and/or Survey – VELB is a species covered by the *SJMSCP* (SJCOG 2000), and the incidental take minimization and mitigation measures outlined in the document are as follows:

“In areas with elderberry bushes, as indicated by the *SJMSCP* Vegetation Maps or per a preconstruction survey identification or other sources indicated in Section 5.2.2.3, the following shall occur:

- A. If elderberry shrubs are present on the project site, a setback of 20 feet from the dripline of each elderberry bush shall be established.
- B. Brightly colored flags or fencing shall be placed surrounding elderberry shrubs throughout the construction process.
- C. For all shrubs without evidence of VELB exit holes which cannot be retained on the project site as described in A and B, above, the JPA shall, during preconstruction surveys, count all stems of 1" or greater in diameter at ground level. Compensation for removal of these stems shall be provided by the JPA within *SJMSCP* Preserves as provided in *SJMSCP* Section 5.5.4(B).
- D. For all shrubs with evidence of VELB exit holes, the JPA shall undertake transplanting of elderberry shrubs displaying evidence of VELB occupation to VELB mitigation sites during the dormant period for elderberry shrubs (November 1 - February 15). For elderberry shrubs displaying evidence of VELB occupation which cannot be transplanted, compensation for removal of shrubs shall be as provided in *SJMSCP* Section 5.5.4 (C).”

If the elderberry shrub can be maintained on the project site, then a 20 ft. setback will need to be established around the shrub (See Figure 11). If the shrub cannot be maintained on the project site, then VELB exit hole surveys consistent with the USFWS protocol (USFWS 2017) will be performed prior to any ground disturbance. Depending on the results of this survey, either mitigation measure C or D above will be used.

- Pre-construction Reptile Survey – Both California glossy snake and San Joaquin coachwhip have a low potential to occur on the Property and therefore a pre-construction survey should be performed no more than 48 hours prior to ground disturbance or vegetation removal. Surveys would be required to determine presence/absence of this species. If the species are found to occur on the project site, then passive relocation methods should be attempted before ground disturbance.
- Pre-Construction Avian Survey – If project construction-related activities would take place during the nesting season (February through August), preconstruction surveys for nesting passerine birds and raptors (birds of prey) in large trees adjacent to the project site should be conducted by a competent biologist 14 days prior to the commencement of the tree removal or site grading activities. Specific attention should be paid to the active Swainson’s hawk nest that was identified across Dos Reis Road from the project site. As per the Incidental Take Minimization Measures for Swainson’s hawk that are outlined in Section 5.2.4.11 of the SJMSCP (SJCOG 2000):

“If a nest tree becomes occupied during construction activities, then all construction activities shall remain a distance of two times the dripline of the tree, measured from the nest.”

The dripline for the tree where the Swainson’s hawk nest was observed is estimated to be 25 feet, making the required buffer for this nest 50 feet. The nest location and buffer are shown in Figure 11.

If any other birds listed under the Migratory Bird Treaty Act are found to be nesting within the project site or within the area of influence, an adequate protective buffer zone should be established by a qualified biologist to protect the nesting site. This buffer shall be a minimum of 50 feet from the project activities for passerine birds, and a minimum of 250 feet for other raptors. The distance shall be determined by a competent biologist based on the site conditions (topography, if the nest is in a line of sight of the construction and the sensitivity of the birds nesting). The nest site(s) shall be monitored by a competent biologist periodically to see if the birds are stressed by the construction activities and if the protective buffer needs to be increased. Once the young have fledged and are

flying well enough to avoid project construction zones (typically by August), the project can proceed without further regard to the nest site(s).

- Burrowing Owl Surveys – Burrowing owls were not identified on the project site during May 2021 survey. However, a burrowing owl pre-construction survey should take place before any construction activities commence. It is recommended that they be conducted whenever burrowing owl habitat or sign is encountered on or adjacent to (within 150 meters) a project site. Occupancy of burrowing owl habitat is confirmed at a site when at least one burrowing owl or its sign at or near a burrow entrance is observed within the last three years. If a burrowing owl or sign is present on the project site three additional protocol level surveys will be initiated. As per the incidental take minimization and mitigation measures outlined in the SJMSCO (SJCOG 2000): If burrowing owls are identified and work is to commence during the non-breeding season (September 1 through January 31), then the owls should be evicted from the project site by passive relocation as described in the CDFW’s report on burrowing owls (1995). If work occurs during the breeding season (February 1 through August 31) then the burrows shall not be disturbed and will be provided with a 75-meter protective buffer. However, if it is determined that the birds have not begun laying eggs, or the juveniles from the occupied burrows are foraging independently and are capable of independent survival, then the burrows can be destroyed.
- Erosion Control – Grading and excavation activities could expose soil to increased rates of erosion during construction periods. During construction, runoff from the warehouse site could adversely surrounding habitats and cause increased particulate matter to enter the storm drain system. Implementation of appropriate mitigation measures would ensure that impacts to aquatic systems would be avoided or minimized. Mitigation measures may include best management practices (BMP’s) such as hay bales, silt fencing, placement of straw mulch and hydro seeding of exposed soils after construction as identified in the Storm Water Pollution Prevention Plan (SWPPP).

The warehouse project will be required to comply with the 2022 Lathrop General Plan and adopted Federal, State, and local regulations for the protection of special-status plants and animals, including habitat. The 2022 Lathrop General Plan includes policies and actions intended to protect special-status plants and animals, including habitat, from adverse effects associated with future development and improvement projects. Additionally, per Project Requirement Bio-2, the development project would be subject to the mitigation recommendations included within Biological Resources Analysis Report (Attachment A) as (listed above), and those set forth by Project Requirement Bio-1 which ensures the project proponent seeks coverage under the San Joaquin County Multi-Species Habitat Conservation and Open Space Plan (SJMSCP) to mitigate for habitat

impacts to covered special status species. The 2022 General Plan EIR determined that cumulative impacts to biological resources would be less than significant.

As such, the proposed warehouse project is consistent with the adopted vision and uses identified within the General Plan, and would not result in any new or increased impacts associated with biological resources, beyond those that were already addressed in the 2022 Lathrop General Plan EIR. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

Project Requirement(s)

Requirement BIO-1: *Compliance with the San Joaquin County Multi-Species Habitat Conservation and Open Space Plan (SJMSCP)*

Requirement BIO-2: *Compliance with the mitigation recommendations included within Biological Resources Analysis Report (Attachment A).*

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

No additional developments are proposed or would be approved as part of the CLSP-2 amendments and Zoning Update that are required to bring these into consistency with the General Plan.

All future development projects will be required to comply with the 2022 Lathrop General Plan and adopted Federal, State, and local regulations for the protection of special-status plants and animals, including habitat. The 2022 Lathrop General Plan includes policies and actions intended to protect special-status plants and animals, including habitat, from adverse effects associated with future development and improvement projects. Additionally, future projects would be required to comply with SJMSCP to mitigate for habitat impacts to covered special status species. As future development applications are received the City will review and analyze each for consistency with the General Plan and local habitat conservation plans as well as State and Federal requirements as described previously, and would also be reviewed at the time of application for potential site specific impacts.

As such, the proposed CLSP-2 amendments and Zoning Update are consistent with the adopted vision and uses identified within the 2022 Lathrop General Plan, and would not result in any new or increased impacts associated with biological resources, beyond those that were already addressed in the General Plan EIR. The CLSP-2 amendments and Zoning Update would not result in a new or substantially more severe impact than what was previously analyzed in the 2022 General Plan EIR.

Response b), c): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

Riparian natural communities support woody vegetation found along rivers, creeks and streams. Riparian habitat can range from a dense thicket of shrubs to a closed canopy of large mature trees covered by vines. Riparian systems are considered one of the most important natural resources. While small in total area when compared to the state's size, they provide a special value for wildlife habitat.

Results of the initial reconnaissance survey indicate that the warehouse project site does not contain any wetlands/waters that might be considered jurisdictional by the U.S. Army Corps of Engineers (Corps), Regional Water Quality Control Board (RWQCB), and/or the California Department of Fish and Wildlife (CDFW). Prior to completing the site survey for this report, site maps, topographic maps, and aerial photographs of the warehouse project site were obtained from several sources and reviewed. This information was used in association with the site visit to determine that there was no evidence of any wetland or water features. It is likely that the high sand content of the soil and regular tilling of the warehouse project site would facilitate in water draining quickly from the site.

As shown in (Attachment A Figure 7), the warehouse project site is located within the critical habitat unit V01 for Delta smelt (*Hypomesus transpacificus*). Critical habitat was established for this species on December 19, 1994 (Federal Register 59 No. 242, pp. 65256-65279). As there are no wetlands or waters located on the warehouse project site, the site does not meet primary constituent elements to support critical habitat. Consequently, there will be no impact to the designated critical habitat.

The proposed warehouse project is consistent with the adopted vision and uses identified within the 2022 Lathrop General Plan, and would not result in any new or increased impacts associated with riparian resources.

The General Plan EIR determined that this impact was less than significant. This impact to biological resources was adequately addressed in the EIR, because there is no wetland or riparian habitat present on the warehouse project site. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed in the 2022 General Plan.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

No additional developments are proposed or would be approved as part of the updates to the CLSP and municipal code that are required to bring these into consistency with the General Plan.

All future development projects will be required to comply with the City's General Plan and adopted Federal, State, and local regulations for the protection of special-status plants and habitat as well as waters of the U.S and wetlands. The City of Lathrop General Plan includes policies and actions intended to protect wetlands and riparian areas and habitats, from adverse effects associated with future development and improvement projects. Additionally, future projects would be required to comply with the SJMSCP to mitigate for habitat impacts. As future development applications are received the City will review and analyze each for consistency with the General Plan and local habitat conservation plans as well as State and Federal requirements as described previously, and would also be reviewed at the time of application for potential site specific impacts.

As such, the proposed project is consistent with the adopted vision and uses identified within the General Plan, and would not result in any new or increased impacts associated with riparian and wetland resources, beyond those that were already addressed in the General Plan EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

Response d): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

The Biological Resources Analysis Report (Attachment A) included a CNDDDB record search that did not reveal any documented wildlife corridors or wildlife nursery sites on or adjacent to warehouse site.

The proposed warehouse project is consistent with the adopted vision and uses identified within the 2022 Lathrop General Plan, and would not result in any new or increased impacts associated with biological resources, beyond those that were already addressed in the 2022 Lathrop General Plan EIR.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

No additional developments are proposed or would be approved as part of the updates to the CLSP and municipal code that are required to bring these into consistency with the General Plan.

All future development projects will be required to comply with the City's General Plan and adopted Federal, State, and local regulations for the protection of special-status plants and animals, and habitats. The City of Lathrop General Plan includes policies and actions intended to protect species and habitats from adverse effects associated with

future development and improvement projects. Additionally, future projects would be required to comply with the San Joaquin County Multi-Species Habitat Conservation and Open Space Plan (SJMSCP) to mitigate for habitat impacts. As future development applications are received the City will review and analyze each for consistency with the General Plan and local habitat conservation plans as well as State and Federal requirements as described previously, and would also be reviewed at the time of application for potential site specific impacts.

As such, the proposed CLSP phase 2 amendments and zoning code amendments project is consistent with the adopted vision and uses identified within the General Plan, and would not result in any new or increased impacts associated with riparian and wetland resources, beyond those that were already addressed in the General Plan EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

Response e): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

The warehouse site is within the boundaries of the SJMSCP. The plan was developed to provide a strategy for balancing the protection of Open Space and wildlife with the protection of local landowners and agricultural practices. The SJMSCP, in accordance with ESA Section 10(a)(1)(B) and CESA Section 2081(b) Incidental Take Permits, provides compensation for the Conversion of Open Space to non-Open Space uses which affect the plant, fish and wildlife species covered by the SJMSCP. Species that are covered by the SJMSCP that have the potential to occur within the Property include VELB, Swainson's hawk, burrowing owl, and the western mastiff bat.

The proposed warehouse project would comply with the SJMSCP requirements regarding special-status species, land conversion, development fees as applicable, per *Requirement Bio-1*. Therefore, the proposed project would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state habitat conservation plan.

The 2022 Lathrop General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

No additional developments are proposed or would be approved as part of the updates to the CLSP and municipal code that are required to bring these into consistency with the General Plan.

All future development projects will be required to comply with the City's General Plan and adopted Federal, State, and local regulations for the protection of special-status plants and animals, and habitats. The 2022 Lathrop General Plan includes policies and actions intended to protect species and habitats from adverse effects associated with future development and improvement projects. Additionally, future projects would be required to comply with the SJMSCP to mitigate for habitat and species impacts. As future development applications are received the City will review and analyze each for consistency with the General Plan and local habitat conservation plans as well as State and Federal requirements as described previously, and would also be reviewed at the time of application for potential site specific impacts.

As such, the proposed project is consistent with the adopted vision and uses identified within the General Plan, and would not result in any new or increased impacts, beyond those that were already addressed in the General Plan EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

Response f): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

As described in Response a, e, above the warehouse project will be required to comply with the City's General Plan and adopted Federal, State, and local regulations for the protection of special-status plants and animals, including habitat. Additionally, future development projects within the CLSP-2 Specific Plan Area would be subject to the requirements included within and set forth by the SJMSCP as further explained in the 2022 Lathrop General Plan EIR Biological Resources chapter. As such, the proposed project is consistent with the adopted vision and uses identified within the General Plan, and would be required to be in compliance with the SJMSCP, and would not result in any new or increased impacts beyond the impacts identified in the General Plan EIR.

The 2022 Lathrop General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

No additional developments are proposed or would be approved as part of the updates to the CLSP and municipal code that are required to bring these into consistency with the General Plan.

All future development projects will be required to comply with the 2022 Lathrop General Plan and adopted Federal, State, and local regulations for the protection of special-status plants and animals, and habitats as explained in the Lathrop General Plan

EIR Biological Resources chapter. The City of Lathrop General Plan includes policies and actions intended to protect species and habitats from adverse effects associated with future development and improvement projects. Additionally, future projects would be required to comply with SJMSCP to mitigate for habitat impacts. As future development applications are received the City will review and analyze each for consistency with the General Plan and local habitat conservation plans as well as State and Federal requirements as described previously, and would also be reviewed at the time of application for potential site specific impacts.

As such, the proposed CLSP-2 amendment and zoning update projects are consistent with the adopted vision and uses identified within the 2022 Lathrop General Plan, and would not result in any new or increased impacts, beyond those that were already addressed in the General Plan EIR. The proposed project would not result in a new or substantially more severe biological resources impacts than what was previously analyzed.

V. CULTURAL RESOURCES -- WOULD THE PROJECT:

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines §15064.5?			X	
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines §15064.5?			X	
c) Disturb any human remains, including those interred outside of formal cemeteries?			X	

RESPONSES TO CHECKLIST QUESTIONS

Responses a), b), c): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE

As described in the General Plan EIR, 172 previously recorded archaeological sites (18 prehistoric sites and 154 historic archaeological sites) identified by the CCIC are located in the City of Lathrop. Among these sites are a Native American village, historic railroad sites, and a host of historic buildings. The Sharpe facility contains the greatest number of building sites. The Native American village site is associated with the San Joaquin River which supports the increased likelihood of additional Native American sites being adjacent to the river. None of the recorded sites noted above occur within the warehouse project site.

Past uses and activities at the warehouse project site have disturbed the land and soils, including agricultural uses and tilling activities. A records search of the California Historical Resources Information System (CHRIS) was completed in July of 2023 and the search revealed no known resources on the site. The General Plan EIR does not identify the warehouse site as having prehistoric period, or cultural resources. Furthermore, neither the site, nor any structures, are designated as a historical resource as defined by Public Resources Code § 21084.1, or listed in, or eligible for listing in the California Register of Historical Resources. There are no known human remains located on the warehouse site, nor is there evidence to suggest that human remains may be present on the project site. However, as with most projects in California that involve grading and other ground-disturbing activities, there is the potential for discovery of a previously unknown cultural and archeological, or cultural resource, or human remains.

The Lathrop General Plan includes policies and actions that both reduce impacts to and conserve cultural, historic, and archaeological resources. The warehouse project would be required to implement the following actions listed below:

- RR-3a: Require a cultural and archaeological survey prior to approval of any project which would require excavation in an area that is sensitive for cultural, tribal, or archaeological resources. If significant cultural, tribal, or archaeological resources, including historic and prehistoric resources, are identified, appropriate measures shall be implemented, such as documentation and conservation, to reduce adverse impacts to the resource. If resources are known or reasonably anticipated to be encountered during construction, the City shall require a detailed mitigation plan which shall require monitoring during grading and other earthmoving activities in undisturbed sediments, and provide a treatment plan for potential resources that may be encountered.
- RR-3b: Require all new development, infrastructure, and other ground-disturbing projects to comply with the following conditions in the event of an inadvertent discovery of cultural resources or human remains:
- A. If construction or grading activities result in the discovery of significant historic or prehistoric archaeological artifacts or unique paleontological resources, all work within 100 feet of the discovery shall cease, the Community Development Director shall be notified, the resources shall be examined by a qualified archaeologist, paleontologist, or historian for appropriate protection and preservation measures; and work may only resume when appropriate protections are in place and have been approved by the Community Development Director; and
 - B. If human remains are discovered during any ground disturbing activity, work shall stop until the Community Development Director and the San Joaquin County Coroner have been contacted. If the human remains are determined to be of Native American origin, the Native American Heritage Commission and the most likely descendants shall be consulted; and work may only resume when appropriate measures have been taken and approved by the Community Development Director.

Project Requirement(s)

Requirement CUL-1: Implement General Plan Action: RR 3b

Given that the results of the above-referenced records search indicate that the warehouse project site is not sensitive for cultural, tribal, or archaeological resources, the project is not subject to the requirements of General Plan Action RR-3a.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

As described previously the General Plan EIR identified various cultural and historic resources within the City. The CLSP-2 Amendment and municipal code amendments do not directly propose any changes that would include adverse impacts to historic, archaeological, or cultural resources. Future developments within the CLSP Phase 2 project area may occur which could affect both known and yet to be identified historic

and archaeological resources. The Lathrop General Plan includes policies and actions that would both reduce impacts to and conserve cultural, historic, and archaeological resources. Implementation of the policies and actions listed below, combined with CEQA review requirements, would ensure that impacts to historic and archaeological resources are less than significant. As the City considers future development and infrastructure projects, each project will be evaluated to ensure conformance with the City's General Plan, Municipal Code, and applicable State and local regulations. Development and infrastructure projects would also be analyzed individually for potential environmental impacts as required by CEQA.

All future development within the CLSP Phase 2 Project area would be subject to all relevant General Plan policies and actions that provide protections for cultural, historical, and tribal resources, including General Plan Actions RR 3A and RR 3B. As future developments are proposed within the CLSP Phase 2 area they would be developed under a Limited Industrial use category (consistent with the General Plan), and would be required to be analyzed for site specific impacts consistent with their project descriptions and site plans. Future projects would be required to be reviewed in compliance with the General Plan and municipal code requirements and the California Environmental Quality Act (CEQA). No additional development is proposed or would be approved at this time. The proposed CLSP-2 Amendment and municipal code amendments are consistent with the land uses and vision described in the General Plan and would be consistent with impacts previously identified. No new impacts or impacts above and beyond what was previously analyzed would occur.

VI. ENERGY

<i>Would the project:</i>	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?			X	
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?			X	

Responses to Checklist Questions

Responses a), b): Adequately addressed in the General Plan EIR.

Appendix G of the State CEQA Guidelines requires consideration of the potentially significant energy implications of a project. CEQA requires mitigation measures to reduce “wasteful, inefficient and unnecessary” energy usage (Public Resources Code Section 21100, subdivision [b][3]). According to Appendix G of the CEQA Guidelines, the means to achieve the goal of conserving energy include decreasing overall energy consumption, decreasing reliance on natural gas and oil, and increasing reliance on renewable energy sources. In particular, the proposed project would be considered “wasteful, inefficient, and unnecessary” if it were to violate state and federal energy standards and/or result in significant adverse impacts related to project energy requirements, energy inefficiencies, energy intensiveness of materials, cause significant impacts on local and regional energy supplies or generate requirements for additional capacity, fail to comply with existing energy standards, otherwise result in significant adverse impacts on energy resources, or conflict or create an inconsistency with applicable plan, policy, or regulation.

As most recently amended by SB 100 (2018), California’s Renewables Portfolio Standard requires retail sellers of electric services and local publicly-owned electric utilities to increase procurement from eligible renewable energy resources to 50 percent of total retail sales by 2026, and 60 percent of total retail sales by 2030. SB 100 also established a State policy goal to achieve 100 percent renewables by 2045.

In March 2021, CEC, the California Public Utilities Commission (CPUC) and CARB released a joint-agency report evaluating the current feasibility of achieving the energy resource and GHG reductions goals of SB 100. The report finds that SB 100 is technically feasible when analyzed under scenarios of varying timelines, advancements in energy generation technology, and energy source portfolios. Under the SB 100 Core Scenario, it is anticipated that California will need to triple its current electricity power capacity.

Title 24, Part 6 of the California Code of Regulations regulates the design of building shells and building components. The standards are updated periodically to allow for consideration and possible incorporation of new energy efficiency technologies and methods.

The CEC's 2022 Building Energy Efficiency Standards (2022 Building Standards), which became effective January 1, 2023, are the currently applicable version of these standards. In addition to the CEC's efforts, in 2008, the California Building Standards Commission adopted the nation's first green building standards. The California Green Building Standards Code (Part 11 of Title 24), commonly referred to as CalGreen Building Standard (CalGreen), establishes voluntary and mandatory standards pertaining to the planning and design of sustainable site development, energy efficiency, water conservation, material conservation, and interior air quality. Like Part 6 of Title 24, the CalGreen standards are periodically updated, with increasing energy savings and efficiencies associated with each code update.

The new 2022 Energy Code improves upon the 2019 standards for construction of residential and non-residential buildings. The CEC periodically amends and enforces Appliance Efficiency Regulations contained in Title 20 of the California Code of Regulations. The regulations establish water and energy efficiency standards for both federally-regulated appliances and non-federally regulated appliances. The regulations cover numerous categories of appliances (e.g., refrigerators; plumbing fixtures; dishwashers; clothes washer and dryers; televisions) and apply to appliances offered for sale in California.

Conclusion

WAREHOUSE SITE

The proposed warehouse project includes the construction of a limited industrial warehouse facility and associated infrastructure improvements to serve the project. Other sources of proposed project energy consumption during construction include fuel used by vehicle trips generated during project construction, and fuel used by off-road construction vehicles during construction activities.

The proposed warehouse project would use energy resources for the operation of project buildings (electricity and natural gas), for on-road vehicle trips (e.g. gasoline and diesel fuel) generated by the proposed project, and from off-road construction activities associated with the proposed project (e.g. diesel fuel). Each of these activities would require the use of energy resources. The proposed warehouse project would be responsible for conserving energy, to the extent feasible, and relies heavily on reducing

per capita energy consumption to achieve this goal, including through Statewide and local measures.

The proposed warehouse project would be in compliance with all applicable Federal, State, and local regulations regulating energy usage. Project-related electricity use results in indirect emissions, due to electricity generation activities occurring at off-site power plant locations. For the warehouse project, electrical power will be supplied by PG&E. PG&E is in the process of implementing the Statewide Renewable Portfolio Standard (RPS) to increase the proportion of renewable energy (e.g. solar and wind) within its energy portfolio. Additionally, energy-saving regulations, including the latest State Title 24 building energy efficiency standards (“part 6”), would be applicable to the proposed project. Other Statewide measures, including those intended to improve the energy efficiency of the statewide passenger and heavy-duty truck vehicle fleet (e.g. the Pavley Bill and the Low Carbon Fuel Standard), would improve vehicle fuel economies, thereby conserving gasoline and diesel fuel. These energy savings would continue to accrue over time. As a result, the proposed warehouse project would not result in any significant adverse impacts related to project energy requirements, energy use inefficiencies, and/or the energy intensiveness of materials by amount and fuel type for each stage of the project including construction, operations, maintenance, and/or removal. PG&E, the electricity and natural gas provider to the site, maintains sufficient capacity to serve the proposed project. The proposed warehouse project would comply with all adopted energy standards, including those adopted by the City of Lathrop, and would not result in significant adverse impacts on energy resources. For these reasons, the proposed warehouse would not be expected cause an inefficient, wasteful, or unnecessary use of energy resources nor cause a significant impact on any of the threshold as described by Appendix G of the CEQA Guidelines.

The proposed warehouse project is consistent with the adopted vision and uses identified within the General Plan, and would not result in any new or increased energy-related impacts beyond those that were already addressed in the General Plan EIR.

The EIR determined that this impact was less than significant. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

The proposed CLSP Phase 2 amendments and Zoning Update are intended to provide consistency with the General Plan. As such, the CLSP Phase 2 amendments and Zoning Update are consistent with the adopted vision and uses identified within the General Plan, and would not result in any new or increased impacts beyond those that were already addressed in the General Plan EIR. No additional development is proposed, or

would be approved at this time. Any future projects proposed within the CLSP-2 Amendments area, or citywide within the Zoning Map, would be reviewed for Project specific energy requirements including compliance with applicable standards such as the California Building Code as well as other local and state energy requirements.

The EIR determined that this impact was less than significant. The proposed project would not result in a new or more severe impact than what was previously analyzed.

VII. GEOLOGY AND SOILS - WOULD THE PROJECT:

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			X	
ii) Strong seismic ground shaking?			X	
iii) Seismic-related ground failure, including liquefaction?			X	
iv) Landslides?			X	
b) Result in substantial soil erosion or the loss of topsoil?			X	
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			X	
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?			X	
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?			X	
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?			X	

BACKGROUND

Information included in the section is further detailed in Attachment B. Preliminary Geotechnical Engineering Report. Prepared by: Terracon Consultants, Inc. August 16, 2021.

RESPONSES TO CHECKLIST QUESTIONS

Responses a.i), a.ii), a.iii: Adequately addressed in the General Plan EIR.

There are no known active or potentially active faults, or Alquist-Priolo Earthquake Fault Zones, located within the City of Lathrop. However, there are numerous faults located in the region. The General Plan EIR Figure 3.6-2 illustrates the location of these faults. These include an unnamed fault east of the City of Tracy, the San Joaquin fault, the Midway fault, the Corral Hollow-Carnegie fault, the Greenville fault, the Antioch fault, and the Los Positas fault. Rupture of any of these faults, or of an unknown fault in the region, could cause seismic ground shaking.

While there are no known active faults located within Lathrop, the City, and areas within it, could experience ground shaking generated by faults outside Lathrop.

All projects would be required to comply with the provisions of the CBSC, which requires development projects to: perform geotechnical investigations in accordance with State law, engineer improvements to address potential seismic and ground failure issues and use earthquake-resistant construction techniques to address potential earthquake loads when constructing buildings and improvements. As future development and infrastructure projects are considered by the City, each project will be evaluated for conformance with the CBSC, General Plan, Zoning Ordinance, and other regulations. Subsequent development and infrastructure would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. In addition to the requirements associated with the CBSC and the Municipal Code, the General Plan includes policies and actions to address potential impacts associated with seismic activity.

Additionally, a Preliminary Geotechnical Engineering Report has been prepared for the proposed warehouse project. The report identifies several geotechnical conditions that could impact design, construction and performance of the proposed structures, pavements, and other site improvements. These conditions will require particular attention in project planning, design and during construction and are discussed briefly below and are included in greater detail in the Preliminary Geotechnical Engineering Report (Attachment B).

Liquefaction Susceptibility

As described in the Geotechnical Report a liquefaction analysis has been completed as part of the Geotechnical evaluation. Based on review of the calculations, the anticipated potential total liquefaction-induced settlement across the warehouse site varies from about 1 to 1½ inches. The Geotechnical Engineering Report estimates the differential liquefaction-induced settlement may be up to ¾ of an inch over 50 feet. With regards to the potential for lateral spreading, it is noted that the warehouse site and surrounding

area in the CLSP-2 Amendment area is relatively level. Given the relative flatness of the local topography and the variability in the layering of the soil lithology, the potential for lateral spreading to affect the warehouse site is low.

Low Strength Soils

Loose granular soils were encountered at anticipated foundation bearing depths at this site. These materials present a risk for potential settlement of shallow foundations, floor slabs, pavements and other surficial improvements. These materials can also be susceptible to disturbance and loss of strength under repeated construction traffic loads and unstable conditions could develop.

Existing, Undocumented Fill Piles

As described in the Geotechnical Report, existing undocumented fill piles were observed in several locations across the warehouse site. Information regarding the source of the fill was unavailable. Undocumented fill can present a greater than normal risk of post-construction movement of foundations, slabs, pavements and other site improvements supported on or above these materials. Consequently, the Geotechnical Evaluation recommended that the existing fill piles be removed from the warehouse site or if re-used, should be evaluated by Terracon prior to construction.

Preliminary Foundation and Floor System Recommendations

As described in the Geotechnical Report loose granular soils were encountered at anticipated shallow foundation bearing depths. Due to the variable relative density of the near surface soils within the proposed building areas on the warehouse site, the foundations for the buildings should be supported on a minimum 2 feet of engineered fill in order to provide uniform support for the structure. Given the shallow groundwater, the engineered fill may be substituted with a minimum of 2 sack cement grout slurry mix or soil-cement stabilization. Additional site preparation recommendations, including subgrade improvement and fill placement, are provided in the Geotechnical Report (Attachment B).

Conclusion

As described in the Geotechnical Evaluation, based on subsurface conditions encountered in the borings, the site appears suitable for the proposed construction from a geotechnical point of view provided certain precautions and design and construction recommendations described in the Geotechnical Evaluation report are followed. The Report has identified several geotechnical conditions that could impact design, construction and performance of the proposed structures, pavements, and other site improvements. These included existing, undocumented fill, shallow groundwater,

expansive soils, and loose granular soils. These conditions will require particular attention in project planning, design and during construction.

The General Plan policies and project review requirements require geotechnical investigations to be completed prior to approval of any buildings as a means to ensure that these facilities are constructed in a way that mitigates site-specific seismic and/or geological hazards. As described previously, a geotechnical study has been prepared to explore, assess, and recommend site planning requirements to address seismic safety issues and provide adequate recommendations for potential hazards identified. With the implementation of the recommendations required by the geotechnical study, as well as applicable State and City codes, potential impacts associated with a seismic event, including rupture of an earthquake fault, seismic ground shaking, and liquefaction would be less than significant.

The EIR determined that this impact was less than significant for the warehouse project. This impact was adequately addressed in the EIR based on the further project analysis contained in the Geotechnical Report. The proposed warehouse project would not result in a new or more severe impacts than what was previously analyzed in the General Plan EIR.

Project Requirement(s)

Requirement GEO-1: Implement recommendations presented in the Preliminary Geotechnical Engineering Report. Prepared by: Terracon Consultants, Inc. during the project design and construction.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

All projects developed pursuant to the CLSP Phase 2 Amendment and Municipal Code Update would be required to comply with the provisions of the CBSC, which requires development projects to: perform geotechnical investigations in accordance with State law, engineer improvements to address potential seismic and ground failure issues and use earthquake-resistant construction techniques to address potential earthquake loads when constructing buildings and improvements. As future development and infrastructure projects are considered by the City, each project will be evaluated for conformance with the CBSC, General Plan, Zoning Ordinance, and other regulations. Subsequent development and infrastructure would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. In addition to the requirements associated with the CBSC and the Municipal Code, the General Plan includes policies and actions to address potential impacts associated with seismic activity.

The EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR in Chapter 3.6. The proposed CLSP Phase 2 Amendment

and Municipal Code Update would not result in a new or substantially more severe geotechnical impacts than what was previously analyzed.

Response a.iv): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

The warehouse site is essentially flat and there are no major slopes in the vicinity of the project site. As such, the warehouse site is exposed to little or no risk associated with landslides.

The EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR as demonstrated in Appendix B. The proposed warehouse project would not result in a new or more severe impact than the geotechnical impacts that were previously analyzed in the General Plan EIR.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

As described in the General Plan EIR the entirety of Lathrop, including the CLSP 2 Area, is essentially flat; therefore, the potential for a landslides is low. Future development and improvement projects would be required to have a specific geotechnical study prepared and incorporated into the improvement design, consistent with the requirements of the State and City codes. In addition to the requirements associated with the CBSC and the Municipal Code, the General Plan includes policies and actions to ensure that development projects address potential geologic hazards, at-risk buildings and infrastructure is evaluated for potential risks, and site-specific studies are completed for area subject to liquefaction.

The EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR for the CLSP Phase 2 Amendment and Municipal Code Update in Chapter 3.6. The proposed project would not result in a new or more severe impact than what was previously analyzed in the General Plan EIR.

Response b): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

Construction and site preparation activities associated with development of the warehouse site include grading for the construction of the proposed project. During the construction preparation process, existing vegetation would be removed to grade and compact the warehouse site, as necessary. As construction occurs, these exposed surfaces could be susceptible to erosion from wind and water. Effects from erosion include impacts on water quality and air quality. Exposed soils that are not properly contained or capped increase the potential for increased airborne dust and increased discharge of sediment and other pollutants into nearby stormwater drainage facilities. Risks

associated with erosive surface soils can be reduced by using appropriate controls during construction and properly revegetating exposed areas. Project Requirement HYDRO 1 would require the implementation of a storm water pollution prevention plan (SWPPP) which includes various best management practices (BMPs) that would reduce the potential for disturbed soils and ground surfaces to result in erosion and sediment discharge into adjacent surface waters during construction activities.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR in Chapter 3.6. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

As evaluated in the General Plan EIR, as future development and infrastructure projects are considered by the City, each project will be evaluated for conformance with the CBSC, General Plan, Zoning Ordinance, and other regulations. In addition to compliance with City standards and policies, the Regional Water Quality Control Board will require a project specific Storm Water Pollution Prevention Plan (SWPPP) to be prepared for each project that disturbs an area of one acre or larger. The SWPPPs will include project specific best management measures that are designed to control drainage and erosion. The General Plan includes a range of policies and actions related to minimizing discharge of materials (including eroded soils) into the storm drain system, which would minimize the potential impacts related to erosion or the loss of topsoil. With the implementation of the policies and actions in the General Plan, as well as applicable State and City requirements, potential impacts associated with erosion and loss of topsoil would be less than significant.

No additional specific developments are proposed or would be approved as part of the CLSP Phase 2 update and municipal code amendments. These plans are being updated for consistency with the Lathrop General Plan and its vision for land uses within the Phase 2 Project area. Additionally, all future projects within the Phase 2 Plan area would be subject to the General Plan requirements for site specific studies, and policies and actions that limit erosion.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed CLSP Phase 2 Amendment and Municipal Code Update project would not result in a new or more severe impact than what was previously analyzed in the General Plan EIR.

Responses c), d): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

Expansive Soils

Expansive soils are present on the warehouse site at depths of approximately 8 feet and below. These soils are unlikely to experience a change in moisture due to site development given the depth encountered and presence of shallow groundwater. However, the Geotechnical Report (Attachment B) provides recommendations to mitigate the effects of soil shrinkage and expansion. Even if these procedures are followed, some movement and cracking in the structures, pavements, and flatwork is possible. The severity of cracking and other damage such as uneven floor slabs and flat work will probably increase if modification of the site results in excessive wetting or drying of the expansive clays. Eliminating the risk of movement and cosmetic distress is generally not feasible, but it may be possible to further reduce the risk of movement if significantly more expensive measures are used during construction. The warehouse project will implement the recommendations described in section Grading and Drainage section of the Earthwork section of this report (Attachment B) in order to reduce potential movement.

Low Strength Soils

Loose granular soils were encountered at anticipated foundation bearing depths at the warehouse site. These materials present a risk for potential settlement of shallow foundations, floor slabs, pavements and other surficial improvements. These materials can also be susceptible to disturbance and loss of strength under repeated construction traffic loads and unstable conditions could develop.

Lateral spreading

Based on the geotechnical consultant's review of the calculations, the anticipated potential total liquefaction-induced settlement across the warehouse site varies from about 1 to 1½ inches. The geotechnical consultant estimates the differential liquefaction-induced settlement may be up to ¾ of an inch over 50 feet. With regards to the potential for lateral spreading, the site and surrounding area is relatively level. Given the relative flatness of the local topography and the variability in the layering of the soil lithology, it is our opinion that the potential for lateral spreading to affect this site is low.

The geotechnical report identifies recommendations for expansive soils and low strength soils and other site specific geologic conditions and include measures to stabilize soils. Requirement GEO-1 requires the recommendations presented in the geotechnical report

to be incorporated into the project design and construction. Final techniques would be determined during construction in consultation with Terracon Consultants. The project is subject to all requirements of the California Building Code Title 24, Part 2, Chapter 18, Section 1803.1.1.2 requires specific geotechnical evaluation when a preliminary geotechnical evaluation determines that expansive or other special soil conditions are present, which, if not corrected, would lead to structural defects. As noted above, a geotechnical report has been prepared for the project site, and the warehouse project would adhere to the engineering requirements contained in the geotechnical report.

The EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR based on the further site specific evaluation contained in Appendix B. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed in the General Plan EIR.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

No additional specific developments are proposed or would be approved as part of the CLSP Phase 2 update and municipal code amendments. These documents are being updated for consistency with the Lathrop General Plan and its vision for land uses within the CLSP Phase 2 Project area. Additionally, all future projects within the Phase 2 Plan area would be subject to the General Plan requirements for site specific reviews. All future projects would be required to comply with the provisions of the CBSC, which requires development projects to: perform geotechnical investigations in accordance with State law, engineer improvements to address potential seismic and ground failure issues and use earthquake-resistant construction techniques to address potential earthquake loads when constructing buildings and improvements. As future development and infrastructure projects are considered by the City, each project will be evaluated for conformance with the CBSC, General Plan, Zoning Ordinance, and other regulations. In addition to the requirements associated with the CBSC and the Municipal Code, the General Plan includes policies and actions to address potential impacts associated with seismic activity.

The EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed CLSP Phase 2 Amendment and Municipal Code Update project would not result in a new or more severe impact than what was previously analyzed in the General Plan EIR.

Response e): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE

The warehouse project site would be served by public wastewater facilities and does not require an alternative wastewater system such as septic tanks.

The General Plan EIR determined this impact is less than significant. This impact was adequately addressed in the EIR. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

As described in the General Plan EIR, all new wastewater generated from General Plan land uses will be collected and transmitted to the MWQCF and LCTF for treatment. There will be no septic tanks or alternative waste water disposal systems utilized for new development planned under the General Plan.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed CLSP Phase 2 Amendment and Municipal Code Update project would not result in a new or more severe impact than what was previously analyzed.

Response f): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE

Known paleontological resources or sites have not been identified on the warehouse site. Additionally, unique geologic features are not located on the warehouse site. The site is currently undeveloped. Should paleontological resources artifacts, such as fossils, or unusual amounts of bones or shells be uncovered during construction activities, a paleontologist should be consulted for an evaluation.

The warehouse project would be required to implement applicable policies and actions included in the General Plan and General Plan EIR.

The General Plan includes Policies, and Actions that minimize warehouse project impacts as listed below:

Policies

RR-3.1 Preservation. Protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code.

Implementing Actions

RR-3a Require a cultural and archaeological survey prior to approval of any project which would require excavation in an area that is sensitive for cultural, tribal, or archaeological resources. If significant cultural, tribal, or archaeological resources, including historic and prehistoric resources, are identified, appropriate measures shall be implemented, such as documentation and conservation, to reduce adverse impacts to the resource. If resources are known or reasonably

anticipated to be encountered during construction, the City shall require a detailed mitigation plan which shall require monitoring during grading and other earthmoving activities in undisturbed sediments, and provide a treatment plan for potential resources that may be encountered.

RR-3b Require all new development, infrastructure, and other ground-disturbing projects to comply with the following conditions in the event of an inadvertent discovery of cultural resources or human remains:

- A. If construction or grading activities result in the discovery of significant historic or prehistoric archaeological artifacts or unique paleontological resources, all work within 100 feet of the discovery shall cease, the Community Development Director shall be notified, the resources shall be examined by a qualified archaeologist, paleontologist, or historian for appropriate protection and preservation measures; and work may only resume when appropriate protections are in place and have been approved by the Community Development Director; and
- B. If human remains are discovered during any ground disturbing activity, work shall stop until the Community Development Director and the San Joaquin County Coroner have been contacted. If the human remains are determined to be of Native American origin, the Native American Heritage Commission and the most likely descendants shall be consulted; and work may only resume when appropriate measures have been taken and approved by the Community Development Director.

RR-3d Require all development, infrastructure, and other ground-disturbing projects to comply with the following conditions in the event of an inadvertent discovery of a paleontological resource:

- A. If construction or grading activities result in the discovery of significant prehistoric archaeological artifacts or unique paleontological resources, all work within 100 feet of the discovery shall cease, the Community Development Director shall be notified, the resources shall be examined by a qualified archaeologist, paleontologist, or historian for appropriate protection and preservation measures; and work may only resume when appropriate protections are in place and have been approved by the Community Development Director.

The warehouse project would be subject to all policies and actions included in the General Plan. The General Plan EIR determined that this impact was less than significant, this impact was adequately addressed in the EIR because there are no known

paleontological resources on the warehouse site. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed in the General Plan EIR.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

As described in the General Plan EIR, as future development and infrastructure projects are considered by the City, each project will be evaluated. No additional specific developments are proposed or would be approved as part of the CLSP Phase 2 update and municipal code amendments. These plans are being updated for consistency with the Lathrop General Plan and its vision for land uses within the Phase 2 Project area. Additionally, all future projects within the Phase 2 Plan area would be subject to the General Plan requirements for site specific reviews.

All future projects within the CLSP Phase 2 and Zoning Update area would be subject to applicable policies and actions included in the General Plan (as detailed above). The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

VIII. GREENHOUSE GAS EMISSIONS – WOULD THE PROJECT:

	Significant Impact Peculiar to the Project or the Project Site	Significant Impact due to New Information	Impact Adequately Addressed in the General Plan EIR	Impact not Previously Addressed in General Plan EIR
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			X	
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gasses?			X	

BACKGROUND DISCUSSION

Various gases in the Earth’s atmosphere, classified as atmospheric greenhouse gases (GHGs), play a critical role in determining the Earth’s surface temperature. Solar radiation enters Earth’s atmosphere from space, and a portion of the radiation is absorbed by the Earth’s surface. The Earth emits this radiation back toward space, but the properties of the radiation change from high-frequency solar radiation to lower-frequency infrared radiation.

Naturally occurring greenhouse gases include water vapor (H₂O), carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), and ozone (O₃). Several classes of halogenated substances that contain fluorine, chlorine, or bromine are also greenhouse gases, but they are, for the most part, solely a product of industrial activities. Although the direct greenhouse gases CO₂, CH₄, and N₂O occur naturally in the atmosphere, human activities have changed their atmospheric concentrations. From the pre-industrial era (i.e., ending about 1750) to 2011, concentrations of these three greenhouse gases have increased globally by 40, 150, and 20 percent, respectively (IPCC 2013)¹.

Greenhouse gases, which are transparent to solar radiation, are effective in absorbing infrared radiation. As a result, this radiation that otherwise would have escaped back into space is now retained, resulting in a warming of the atmosphere. This phenomenon is known as the greenhouse effect. Among the prominent GHGs contributing to the greenhouse effect are carbon dioxide (CO₂), methane (CH₄), ozone (O₃), water vapor, nitrous oxide (N₂O), and chlorofluorocarbons (CFCs).

¹ Intergovernmental Panel on Climate Change. 2013. “Climate Change 2013: The Physical Science Basis, Summary for Policymakers.” Available: <http://www.climatechange2013.org/images/report/WG1AR5_SPM_FINAL.pdf>.

Emissions of GHGs contributing to global climate change are attributable in large part to human activities associated with the industrial/manufacturing, utility, transportation, residential, and agricultural sectors (California Air Resources Board 2023)². In California, the transportation sector is the largest emitter of GHGs, followed by industrial energy consumption (California Air Resources Board 2023).

Carbon dioxide equivalents are a measurement used to account for the fact that different GHGs have different potential to retain infrared radiation in the atmosphere and contribute to the greenhouse effect. This potential, known as the global warming potential of a GHG, is also dependent on the lifetime, or persistence, of the gas molecule in the atmosphere. Expressing GHG emissions in carbon dioxide equivalents takes the contribution of all GHG emissions to the greenhouse effect and converts them to a single unit equivalent to the effect that would occur if only CO₂ were being emitted.

Consumption of fossil fuels in the transportation sector was the single largest source of California's GHG emissions in 2022, accounting for 38% of total GHG emissions in the state. This category was followed by the industrial sector (23%), the electricity generation sector (including both in-state and out of-state sources) (16%), the agriculture & forestry sector (9%), the residential energy consumption sector (8%), and the commercial energy consumption sector (6%) (California Air Resources Board, 2023).

EFFECTS OF GLOBAL CLIMATE CHANGE

The effects of increasing global temperature are far-reaching and extremely difficult to quantify. The scientific community continues to study the effects of global climate change. In general, increases in the ambient global temperature as a result of increased GHGs are anticipated to result in rising sea levels, which could threaten coastal areas through accelerated coastal erosion, threats to levees and inland water systems and disruption to coastal wetlands and habitat.

If the temperature of the ocean warms, it is anticipated that the winter snow season would be shortened. Snowpack in the Sierra Nevada provides both water supply (runoff) and storage (within the snowpack before melting), which is a major source of supply for the state. The snowpack portion of the supply could potentially decline by 70% to 90% by the end of the 21st century (Cal EPA 2006)³. This phenomenon could lead to significant challenges securing an adequate water supply for a growing state population. Further, the increased ocean temperature could result in increased moisture flux into the state;

² California Air Resources Board. 2023. Current California GHG Emission Inventory Data. Available: <<https://ww2.arb.ca.gov/ghg-inventory-data>>.

³ California Environmental Protection Agency, Climate Action Team. 2006. Climate Action Team Report to Governor Schwarzenegger and the Legislature. Available: <http://www.climatechange.ca.gov/climate_action_team/reports/>.

however, since this would likely increasingly come in the form of rain rather than snow in the high elevations, increased precipitation could lead to increased potential and severity of flood events, placing more pressure on California's levee/flood control system.

Sea level has risen approximately seven inches during the last century and it is predicted to rise an additional 22 to 35 inches by 2100, depending on the future GHG emissions levels (Cal EPA 2006). If this occurs, resultant effects could include increased coastal flooding, saltwater intrusion and disruption of wetlands (Cal EPA 2006). As the existing climate throughout California changes over time, mass migration of species, or failure of species to migrate in time to adapt to the perturbations in climate, could also result. According to the California Environmental Protection Agency, the impacts of global warming in California are anticipated to include, but are not limited to, the following.

Public Health

Higher temperatures are expected to increase the frequency, duration, and intensity of conditions conducive to air pollution formation. For example, days with weather conducive to ozone formation are projected to increase from 25% to 35% under the lower warming range and to 75% to 85% under the medium warming range. In addition, if global background ozone levels increase as predicted in some scenarios, it may become impossible to meet local air quality standards. Air quality could be further compromised by increases in wildfires, which emit fine particulate matter that can travel long distances depending on wind conditions. The Climate Scenarios report indicates that large wildfires could become up to 55% more frequent if GHG emissions are not significantly reduced.

In addition, under the higher warming scenario, there could be up to 100 more days per year with temperatures above 90°F in Los Angeles and 95°F in Sacramento by 2100. This is a large increase over historical patterns and approximately twice the increase projected if temperatures remain within or below the lower warming range. Rising temperatures will increase the risk of death from dehydration, heat stroke/exhaustion, heart attack, stroke, and respiratory distress caused by extreme heat.

Water Resources

A vast network of man-made reservoirs and aqueducts capture and transport water throughout the state from Northern California rivers and the Colorado River. The current distribution system relies on Sierra Nevada snow pack to supply water during the dry spring and summer months. Rising temperatures, potentially compounded by decreases in precipitation, could severely reduce spring snow pack, increasing the risk of summer water shortages.

The state's water supplies are also at risk from rising sea levels. An influx of saltwater would degrade California's estuaries, wetlands, and groundwater aquifers. Saltwater intrusion caused by rising sea levels is a major threat to the quality and reliability of water within the southern edge of the Sacramento/San Joaquin River Delta, a major state fresh water supply. Global warming is also projected to seriously affect agricultural areas, with California farmers projected to lose as much as 25% of the water supply they need; decrease the potential for hydropower production within the state (although the effects on hydropower are uncertain); and seriously harm winter tourism. Under the lower warming range, the snow dependent winter recreational season at lower elevations could be reduced by as much as one month. If temperatures reach the higher warming range and precipitation declines, there might be many years with insufficient snow for skiing, snowboarding, and other snow dependent recreational activities.

If GHG emissions continue unabated, more precipitation will fall as rain instead of snow, and the snow that does fall will melt earlier, reducing the Sierra Nevada spring snow pack by as much as 70% to 90%. Under the lower warming scenario, snow pack losses are expected to be only half as large as those expected if temperatures were to rise to the higher warming range. How much snow pack will be lost depends in part on future precipitation patterns, the projections for which remain uncertain. However, even under the wetter climate projections, the loss of snow pack would pose challenges to water managers, hamper hydropower generation, and nearly eliminate all skiing and other snow-related recreational activities.

Agriculture

Increased GHG emissions are expected to cause widespread changes to the agriculture industry reducing the quantity and quality of agricultural products statewide. Although higher carbon dioxide levels can stimulate plant production and increase plant water-use efficiency, California's farmers will face greater water demand for crops and a less reliable water supply as temperatures rise.

Plant growth tends to be slow at low temperatures, increasing with rising temperatures up to a threshold. However, faster growth can result in less-than-optimal development for many crops, so rising temperatures are likely to worsen the quantity and quality of yield for a number of California's agricultural products. Products likely to be most affected include wine grapes, fruits and nuts, and milk.

Crop growth and development will be affected, as will the intensity and frequency of pest and disease outbreaks. Rising temperatures will likely aggravate ozone pollution, which makes plants more susceptible to disease and pests and interferes with plant growth.

In addition, continued global warming will likely shift the ranges of existing invasive plants and weeds and alter competition patterns with native plants. Range expansion is expected in many species while range contractions are less likely in rapidly evolving species with significant populations already established. Should range contractions occur, it is likely that new or different weed species will fill the emerging gaps. Continued global warming is also likely to alter the abundance and types of many pests, lengthen pests' breeding season, and increase pathogen growth rates.

Forests and Landscapes

Global warming is expected to alter the distribution and character of natural vegetation thereby resulting in a possible increased risk of large wildfires. If temperatures rise into the medium warming range, the risk of large wildfires in California could increase by as much as 55%, which is almost twice the increase expected if temperatures stay in the lower warming range. However, since wildfire risk is determined by a combination of factors, including precipitation, winds, temperature, and landscape and vegetation conditions, future risks will not be uniform throughout the state. For example, if precipitation increases as temperatures rise, wildfires in southern California are expected to increase by approximately 30% toward the end of the century. In contrast, precipitation decreases could increase wildfires in northern California by up to 90%.

Moreover, continued global warming will alter natural ecosystems and biological diversity within the state. For example, alpine and sub-alpine ecosystems are expected to decline by as much as 60% to 80% by the end of the century as a result of increasing temperatures. The productivity of the state's forests is also expected to decrease as a result of global warming.

Rising Sea Levels

Rising sea levels, more intense coastal storms, and warmer water temperatures will increasingly threaten the state's coastal regions. Under the higher warming scenario, sea level is anticipated to rise 22 to 35 inches by 2100. Elevations of this magnitude would inundate coastal areas with saltwater, accelerate coastal erosion, threaten vital levees and inland water systems, and disrupt wetlands and natural habitats.

RESPONSES TO CHECKLIST QUESTIONS

Response a), and b): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE

A warehouse project's GHG emissions are at a micro-scale relative to global emissions but could result in a cumulatively considerable incremental contribution to a significant cumulative macro-scale impact. Implementation of the proposed warehouse project would contribute to increases of GHG emissions that are associated with global climate

change. Estimated GHG emissions attributable to future development would be primarily associated with increases of CO₂ and other GHG pollutants, such as methane (CH₄) and nitrous oxide (N₂O), from mobile sources and utility usage.

Development of the proposed warehouse project would include activities that emit greenhouse gas emissions over the short and long term. A summary of short- and long-term emissions and the analysis for each are included below.

It should be noted that the baseline against which to compare potential impacts of the project includes the natural and anthropogenic drivers of global climate change, including worldwide GHG emissions from human activities that have increased by about 90 percent since 1970.⁴ As a result, the study area for climate change and the analysis of GHG emissions is broad. However, the project site also limited by CEQA Guidelines Section 15064.4(b), which directs lead agencies to consider an “indirect physical change” only if that change is a reasonably foreseeable impact, which may be caused by the project.

CEQA Guidelines Section 15064.4 recommends that lead agencies quantify GHG emissions of projects and consider several other factors that may be used in the determination of significance of GHG emissions from a project, including the extent to which the project may increase or reduce GHG emissions; whether a project exceeds an applicable significance threshold; and the extent to which the project complies with regulations or requirements adopted to implement a plan for the reduction or mitigation of GHG emissions.

CEQA Guidelines Section 15064.4 does not establish a threshold of significance. CEQA Guidelines Section 15064.7 provides lead agencies the discretion to establish significance thresholds for their respective jurisdictions, and in establishing those thresholds, a lead agency may appropriately look to thresholds developed by other public agencies or suggested by other experts, as long as any threshold chosen is supported by substantial evidence. The City of Lathrop has not adopted a numerical significance threshold for assessing impacts related to GHG emissions. Similarly, the SJVACPD, the Governor’s Office of Planning and Research, CARB, California Air Pollution Control Officers Association (CAPCOA), or any other State or applicable regional agency has yet to adopt a numerical significance threshold for assessing GHG emissions that is applicable to the project. The analysis has quantified the project’s GHG emissions herein for informational purposes only.

⁴ U.S. EPA, Global Greenhouse Gas Emissions Data, <https://www.epa.gov/ghgemissions/global-greenhouse-gas-emissions-data>, accessed July 14, 2022.

Short-Term Emissions

Short-term greenhouse gas emissions associated with the warehouse project would occur because of construction equipment used for the following: demolition, grading, paving, and building construction activities associated with development and infrastructure. GHG emissions would also result from worker and vendor trips to and from project sites and from demolition and soil hauling trips. Construction activities are short-term and cease to emit greenhouse gases upon completion, unlike operational emissions that are continuous year after year until operation of the use ceases. Proposed project construction-related GHGs are provided in Table GHG-1, below.

Table GHG-1: Construction GHG Emissions (Unmitigated Metric Tons/Year)

Year	Bio-CO₂	NBio-CO₂	Total CO₂	CH₄	N₂O	CO₂e
2023	0	163	163	<0.1	<0.1	163
2024	0	724	724	<0.1	<0.1	727
2025	0	235	235	<0.1	<0.1	236
Maximum	0	724	724	<0.1	<0.1	727
Total	0	1,846	1,846	<0.1	<0.1	1,853

SOURCE: CALEEMOD (v.2022.1).

As shown in Table GHG-1, the proposed warehouse project is anticipated to generate a maximum of approximately 727 MT CO₂e per year, and a total of 1,853 MT CO₂e over the full course of construction. As previously described, these emissions are provided herein for informational purposes only.

Development of the Phase 2 Plan Area with light industrial uses was evaluated in the General Plan EIR. As described in the Lathrop General Plan EIR, all future development and infrastructure projects within the General Plan Planning Area would be subject to the General Plan goals, policies, and actions, which were adopted to reduce emissions and greenhouse gas impacts. For example, Policy RR-6.9 requires the City to consider, and implement as feasible, new policies and programs that will help to provide energy efficient alternatives to fossil fuel use and reduce consumption in order to reduce greenhouse gas emissions.

Nevertheless, the proposed General Plan includes higher levels and rates of growth than those that would be facilitated under the existing Lathrop General Plan. As such, total emissions levels associated with project buildout would increase, which may indirectly hinder the SJVAPCDs efforts to reduce total emissions of greenhouse gases. The General Plan EIR (EIR) determined that this impact was significant and unavoidable. While the General Plan EIR determined that this impact was significant and unavoidable, the proposed project would not result in a new or more severe impact than what was previously analyzed in the General Plan EIR.

Long-Term Emissions

Future development projects will result in continuous GHG emissions from mobile, area, and operational sources. Mobile sources, including vehicle trips to and from development projects, will result primarily in emissions of CO₂, with minor emissions of CH₄ and N₂O. The most significant GHG emission from natural gas usage will be methane. Electricity usage by future development and indirect usage of electricity for water and wastewater conveyance will result primarily in emissions of carbon dioxide. Disposal of solid waste will result in emissions of methane from the decomposition of waste at landfills coupled with CO₂ emission from the handling and transport of solid waste. These sources combine to define the long-term greenhouse gas inventory for the warehouse project.

As described in the Project Description, the proposed project includes the development of a new integrated, warehouse/light industrial/retail office development on approximately 89.5-acre property located at the northwest corner of Dos Reis Rd and Manthey Road (the “warehouse site”, or “project site”). The proposed development includes an approximately 1,486,607 square foot single or multi-tenant building with a mix of retail, office/call center, and warehouse and distribution uses. The warehouse project is anticipated to provide up to 1,295 jobs at full operation. The primary mix of uses within the warehouse building include an up to 100,000 square foot retail showroom, a 24,000 square foot office space consisting of call center and a regional office for up to 50 people. Warehouse and distribution uses will comprise the balance of the 1,352,347 square feet. Proposed warehouse project operation-related GHGs are provided in Table GHG-2, below.

Table GHG-2: Operational GHG Emissions (Metric Tons/Year)

<i>Category</i>	<i>Bio-CO₂</i>	<i>NBio-CO₂</i>	<i>Total CO₂</i>	<i>CH₄</i>	<i>N₂O</i>	<i>CO₂e</i>
Area	0	0.2	0.2	<0.1	0.1	0.2
Energy	0	19	19	<0.1	<0.1	19
Mobile	0	2,795	2,795	0.1	0.2	2,847
Waste	125	0	125	13	0	436
Water	109	104	213	11	0.3	573
Total	234	2,918	3,151	24	0.4	3,875

SOURCE: CALEEMOD (v.2022.1).

As shown, total operational GHG emissions are anticipated to be approximately 3,875 MT CO₂e. Additionally, the warehouse project’s 15.43 daily VMT per employee is lower than the San Joaquin County VMT threshold of 16.2. As previously described, these emissions are provided herein for informational purposes only.

The Lathrop General Plan EIR determined that GHG impacts were significant and unavoidable. Cumulative impacts associated with GHG emissions from General Plan

buildout was analyzed in detail in Chapter 3.7 of the General Plan EIR. The potential GHG emissions resulting from warehouse project operations were accounted for the cumulative GHG analysis contained in the General Plan EIR. While the General Plan EIR determined that this impact was significant and unavoidable, the proposed project would not result in a new or more severe impact than what was previously analyzed in the General Plan EIR.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

Short-term greenhouse gas emissions would occur because of construction equipment used for future development projects within the CLSP Phase 2 area and would include the following: demolition, grading, paving, and building construction activities associated with development and infrastructure. GHG emissions would also result from worker and vendor trips to and from project sites and from demolition and soil hauling trips. Construction activities are short-term and cease to emit greenhouse gases upon completion, unlike operational emissions that are continuous year after year until operation of the use ceases. As such, SJVAPCD recommends in its draft threshold to amortize project-specific construction emissions over a 30-year operational lifetime of a project. This normalizes construction emissions so that they can be grouped with operational emissions to generate a precise project GHG inventory. However, the SJVAPCD does not have a current threshold of significance for construction-related GHG emissions for plan-level impacts (including General Plans and Specific Plans).

The 2022 RTP/SCS relied upon the Lathrop General Plan to determine population, employment, and VMT increases associated with General Plan buildout in Lathrop as part of the RTP/SCS's overall analysis of per capita GHG emissions throughout the region. As noted in the 2022 RTP/SCS, the Plan meets and exceeds the GHG targets established by the CARB. The Lathrop General Plan is supportive and complimentary of the policies and strategies included in the 2022 RTP/SCS, and does not conflict with implementation of this plan.

The Lathrop General Plan EIR determined that GHG impacts were significant and unavoidable. This impact was adequately addressed in the EIR based on the analysis provided in Chapter 3.7 of the General Plan EIR. The proposed CLSP Phase 2 Amendment and Municipal Code Update would not result in a new or more severe impact than what was previously analyzed.

IX. HAZARDS AND HAZARDOUS MATERIALS -- WOULD THE PROJECT:

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			X	
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			X	
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?			X	
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?			X	
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?			X	
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?			X	
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?			X	

RESPONSES TO CHECKLIST QUESTIONS

A Phase I Environmental Site Assessment Report, and Shallow Soil Investigation Report were prepared by Partner Engineering and Science, Inc. in 2021.

The full reports are available in Attachment C (Phase I Environmental Site Assessment Report) and (Attachment D) Shallow Soil Investigation Report.

Responses a), b): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE

The proposed warehouse project would develop a new Limited Industrial warehouse in an area of the City that is designated by the General Plan for industrial site uses. Construction equipment and materials would likely require the use of petroleum-based products (oil, gasoline, diesel fuel), and a variety of common chemicals including paints, cleaners, and solvents. Transportation, storage, use, and disposal of hazardous materials during construction activities would be required to comply with applicable federal, state, and local statutes and regulations. Compliance would ensure that human health and the environment are not exposed to hazardous materials. In addition, Project Requirements included in the Hydrology Section of this Report (Hydrology and Water Quality) requires the project applicant to implement a stormwater pollution prevention plan (SWPPP) during construction activities, which would prevent contaminated runoff from leaving the project site during construction.

In addition to the requirements associated with Federal and State regulations and the Municipal Code, the City's General Plan includes policies and actions to address potential impacts associated with hazardous materials among other issues. Specifically, Policy PS-4.5 requires coordination with the Lathrop Manteca Fire District (LMFD) to ensure that businesses in the city which handle hazardous materials prepare and file a Hazardous Materials Business Plan (HMBP). The HMBP shall consist of general business information, basic information on the location, type, quantity, and health risks of hazardous materials, and emergency response and training plans.

A Phase I Environmental Site Assessment and Shallow Soil Investigation Report were prepared by Partner Engineering and Science, Inc. the findings are provided below;

Phase I Environmental Site Assessment

A recognized environmental condition (REC) refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A controlled recognized environmental condition (CREC) refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or

petroleum products allowed to remain in place subject to the implementation of required controls.

- Partner did not identify any controlled recognized environmental conditions on the warehouse site during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- Partner did not identify any historical recognized environmental conditions on the warehouse site during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- According to a historical review, the subject property has been used for agricultural purposes from at least 1915 until 2006. Since portions of the subject parcel were historically used for agricultural purposes, there is a potential that agricultural related chemicals including pesticides, herbicides, and fertilizers may have been used and stored onsite. No evidence of pesticide or herbicide mixing areas or bulk storage areas was observed during the site reconnaissance or during Partner's review of historical aerial photographs. According to information provided by the client, the subject property is planned for commercial/warehouse development. The occupied areas of the subject property will either paved over or covered by building structures that minimize direct contact to any potential remaining concentrations in the soil. Additionally, during site development activities, near surface soils (where residual agricultural chemical concentrations would most likely been present, if at all) will be mixed with fill material or disturbed during grading. Also, it is common that engineered fill material is placed over underlying soils as part of the development activities. These additional variables serve to further reduce the potential for exposure to residual agricultural chemicals (if any). Based on planned development activities, Partner concludes that the possible use of agricultural chemicals does not represent a recognized environmental condition or a human health risk, and no additional investigation is required of the warehouse site. Additionally, based on this information,

vapor migration is not expected to represent a significant environmental concern at this time. Conclusions, Opinions, and Recommendations

Partner performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of APN 192-020-140-000, 192-020-590-000, and 192-020-600-000 in Lathrop, San Joaquin County, California (the “subject property” or “warehouse site”).

This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property; however, environmental issues were identified. Based on the conclusions of this assessment, Partner recommended no further investigation of the subject property.

Shallow Soil Investigation Report

The purpose of the investigation was to evaluate the potential impact of organochlorine pesticides (OCPs), arsenic, and/or lead to shallow soil as a consequence of a release or releases from historical on-site agricultural-related uses on the warehouse site.

Partner collected 120 shallow soil samples on May 12, 2021, which were transported in an iced cooler under chain-of-custody protocol to SunStar Laboratories Inc., a state-certified laboratory [California Department of Public Health Environmental Laboratory Accreditation Program certificate number 2250] in the City of Lake Forest, California, for analysis. A total of 30 composite samples were analyzed for OCPs via Environmental Protection Agency (EPA) Method 8081. Additionally, 30 discrete soil samples were analyzed for arsenic and lead via EPA Method 6010B.

Based on the results, low concentrations of lead were detected in localized areas of the northern parcel (APN 192-020-140). Lead was detected in two discrete soil samples; however, the detections do not exceed residential or commercial screening criteria and are likely representative of background conditions. As such the identified lead impacts in soil do not represent a significant risk to human health or the environment associated with the development of the warehouse site.

Local Plan for Hazardous Materials

Facilities that store hazardous materials on-site are required to maintain a Hazardous Materials Business Plan in accordance with State regulations. In the event of an accidental release of hazardous materials, the local CUPA and emergency management agencies (e.g., Police and Fire) would respond. As described in the General Plan EIR, all future projects allowed under the General Plan would be required to comply with the provisions of Federal, State, and local requirements related to hazardous materials. As

future development and infrastructure projects are considered by the City, each project would be evaluated for potential impacts, specific to the project, associated with hazardous materials as required under CEQA. Specifically, Policy PS-4.5 requires Coordination with the LMFDD to ensure that businesses in the city which handle hazardous materials prepare and file a Hazardous Materials Business Plan (HMBP). The HMBP shall consist of general business information, basic information on the location, type, quantity, and health risks of hazardous materials, and emergency response and training plans.

Conclusion

Based on the results of the site investigations as described above, the site assessments have revealed no recognized environmental conditions in connection with the subject warehouse property. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed in the Lathrop General Plan EIR. Additionally, consistent with the General Plan Policy PS: 4-4 if the warehouse project will store, transport or handle hazardous materials a HMBP shall be prepared.

Project Requirement(s)

Requirement HAZ-1: *If the project will store, transport or handle hazardous materials the project shall be required to prepare and file a Hazardous Materials Business Plan (HMBP) with the City prior to issuance of Certificate of Occupancy.*

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

No additional specific developments are proposed or would be approved as part of the CLSP Phase 2 amendment and municipal code amendments. These documents are being updated for consistency with the Lathrop General Plan and its vision for land uses within the Phase 2 Project area. Additionally, all future projects within the Phase 2 Plan area would be subject to the General Plan requirements for site specific studies, and policies and actions that limit any exposure or upset of hazardous materials. Facilities that store hazardous materials on-site are required to maintain a Hazardous Materials Business Plan in accordance with State regulations. In the event of an accidental release of hazardous materials, the local CUPA and emergency management agencies (e.g., Police and Fire) would respond. All future projects allowed under the General Plan would be required to comply with the provisions of Federal, State, and local requirements related to hazardous materials. As future development and infrastructure projects are considered by the City, each project would be evaluated for potential impacts, specific to the project, associated with hazardous materials as required under CEQA.

This impact was adequately addressed in the EIR. The proposed CLSP Phase 2 Amendment and Municipal Code Update are consistent with the uses and standards identified in the General Plan and would not result in a new or more severe impact than what was previously analyzed in the Lathrop General Plan EIR.

Response c): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE

The proposed warehouse project has limited potential for the routine transport, use, or disposal of hazardous materials as discussed above. One school, is located within one-quarter mile of the warehouse site. The proposed site uses do not propose business activities that will result in hazardous emissions or require handling of hazardous or acutely hazardous materials, substances, or waste. Potential impacts from truck emissions and TACs are discussed in detail in the Air Quality portion of this report and were found to be less than significant.

All hazardous materials would be handled in accordance with Federal, State, local, and County requirements, which would limit the potential for a project to expose nearby uses, including schools, to hazardous emissions or an accidental release.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR based on the findings of the Phase I Environmental Assessment for the warehouse project. The proposed project would not result in a new or more severe impact than what was previously analyzed in the General Plan EIR.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

No additional specific developments are proposed or would be approved as part of the CLSP Phase 2 update and municipal code amendments. These documents are being updated for consistency with the Lathrop General Plan and its vision for land uses within the CLSP Phase 2 Project area. Additionally, all future projects within the CLSP Phase 2 Plan area would be subject to the General Plan requirements for site specific studies, and policies and actions that limit any exposure or upset of hazardous materials. As future development and infrastructure projects are considered by the City, each project would be evaluated for potential impacts, specific to the project, associated with hazardous materials as required under CEQA.

This impact was adequately addressed in the EIR. The proposed CLSP Phase 2 update and municipal code amendments are consistent with the uses and standards identified in the General Plan and would not result in a new or more severe impact than what was previously analyzed in the Lathrop General Plan EIR.

Response d): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE

According to the California Department of Toxic Substances Control (DTSC) there are no Federal Superfund Sites, State Response Sites, or Voluntary Cleanup Sites on, or adjacent to the warehouse site. The warehouse site is not included on a list of hazardous materials sites compiled pursuant to Government Code § 65962.5.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR based on the results of the Phase 1 ESA. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed in the Lathrop General Plan EIR.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

According to the California Department of Toxic Substances Control (DTSC) there are no Federal Superfund Sites, State Response Sites, or Voluntary Cleanup Sites on, CLSP Phase 2 Project area. The site is not included on a list of hazardous materials sites compiled pursuant to Government Code § 65962.5. No additional specific developments are proposed or would be approved as part of the CLSP Phase 2 update and municipal code amendments. These plans are being updated for consistency with the Lathrop General Plan and its vision for land uses within the Phase 2 Project area. As future development and infrastructure projects are considered by the City, each project would be evaluated for potential impacts, specific to the project, associated with hazardous materials as required under CEQA.

This impact was adequately addressed in the EIR based on the analysis contained in Chapter 3.8. The proposed project is consistent with the uses and standards identified in the General Plan and would not result in a new or more severe impact than what was previously analyzed.

Responses e): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE, CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

The General Plan EIR (Chapter 3.12 Noise) determined the General Plan area is not located within two miles of a public or private airport. Therefore item “c” was not further discussed. The proposed warehouse project and the CLSP Phase 2 Amendment and Municipal Code Update would not expose people in the Project site or within the CLSP Phase 2 Plan Area to excessive noise levels from aircrafts. As such, this topic does not require further analysis. The proposed project would not result in a new or more severe impact than what was previously analyzed in the Lathrop General Plan EIR.

Response f): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE, CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

The proposed project does not include actions that would impair or physically interfere with an adopted emergency response plan or emergency evacuation plan. The project involves the development of limited industrial land uses within an urbanized environment, and would not interfere with any emergency response or evacuation plans.

The warehouse project site has been designed to keep all truck traffic as far from residential areas, bicycle facilities, and pedestrian facilities as possible, in order to reduce potential conflicts and hazards, and in order to not interfere with emergency responders. The warehouse site also includes a dedicated emergency vehicle access drive on Dos Reis Road.

The CLSP-2 Amendment Plan Area includes several new roadways within an interconnected roadway system. These new roadways, along with improvements to existing roadways, provide the necessary access for the Plan Area. The roadway network is shown on the Vehicular Circulation Plan (Figure 3.4 in the CLSP-2 Amendment), while the locations of each individual street section are identified on the Street Sections Key Map (Figure 3.5 in the CLSP-2 Amendment).

The proposed CLSP-2 Amendment roadway system is based on a pattern of streets that provides safe and efficient access for vehicles, bicycles and pedestrians. The roadway system includes an extension of Golden Valley Parkway and Stanford Crossing, widening of Dos Reis Road, De Lima Road, and Manthey Road, and the construction of several new local industrial roads consistent with the 2022 Lathrop General Plan. The addition of traffic signals may be required at various intersections as determined for future specific project developments in the CLSP-2 Amendment Plan Area.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR based on the analysis contained in Chapter 3.8. The proposed project would not result in a new or more severe impact than what was previously analyzed.

Response g): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE, CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

The risk of wildfire is related to a variety of parameters, including fuel loading (vegetation), fire weather (winds, temperatures, humidity levels and fuel moisture contents) and topography (degree of slope). Steep slopes contribute to fire hazard by intensifying the effects of wind and making fire suppression difficult. Fuels such as grass are highly flammable because they have a high surface area to mass ratio and require less

heat to reach the ignition point, while fuels such as trees have a lower surface area to mass ratio and require more heat to reach the ignition point.

The City of Lathrop is not categorized as a “Very High” FHSZ and no cities or communities within San Joaquin County are categorized as a “Very High” FHSZ by CalFire. The majority of the Lathrop is located within a Local Responsibility Area (LRA). The portions of the Lathrop located in an LRA include: a developed area adjacent south of the Defense Depot San Joaquin Sharpe site and the Sharpe AAF Airport, a developed area near D’Arcy Parkway, an area along the San Joaquin River, just west of Interstate 5, and an undeveloped area along the San Joaquin River in the westernmost Planning Area. The Lathrop Planning Area is covered by two independent Fire Protection Districts: the Lathrop-Manteca Fire District (LMFD) and French Camp-McKinley Fire District (French Camp). The LMFD provides fire protection services for all lands within the City of Lathrop being primarily lands south of Roth Road. The French Camp provides fire protection for the rural area primarily south of Stockton and north of Roth Road both east and west of Interstate 5. French Camp service boundaries include some 16 square miles, including a small portion of Stockton. Approximately 805 acres of the French Camp Fire District is in the Lathrop Area of Interest and about 149 acres is in the Sphere of Influence.

Development of the warehouse project and development allowed under the CLSP Phase 2 update and municipal code amendments would not place people and/or structures in areas at significant risk of wildland fires.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR in Chapter 3.8. The proposed project would not result in a new or more severe impact than what was previously analyzed.

X. HYDROLOGY AND WATER QUALITY -- WOULD THE PROJECT:

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?			X	
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?			X	
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:			X	
i) result in substantial erosion or siltation on- or off-site;			X	
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;			X	
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems to provide substantial additional sources of polluted runoff; or			X	
iv) impede or redirect flood flows?			X	
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?			X	
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?			X	

RESPONSES TO CHECKLIST QUESTIONS

Responses a): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

Grading, excavation, removal of vegetation cover, and loading activities associated with construction activities could temporarily increase runoff, erosion, and sedimentation. Construction activities also could result in soil compaction and wind erosion impacts that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas.

The State Water Resources Control Board (SWRCB) regulates stormwater discharges associated with construction activities where clearing, grading, or excavation results in a land disturbance of one or more acres. Performance Standard NDCC-13 of the City's National Pollutant Discharge Elimination System (NPDES) permit requires applicants to show proof of coverage under the State's General Construction Permit prior to receipt of any construction permits. The State's General Construction Permit requires a Storm Water Pollution Prevention Plan (SWPPP) to be prepared for the site. A SWPPP describes Best Management Practices (BMPs) to control or minimize pollutants from entering stormwater and must address both grading/erosion impacts and non-point source pollution impacts of the development project, including post-construction impacts. The City requires all development projects to use BMPs to treat runoff including standards included in the Multi-Agency Post-construction Standards (LID). The City of Lathrop, in collaboration with San Joaquin County, Tracy, Lodi, Manteca, and Patterson prepared a Multi-Agency Post-construction Stormwater Standards Manual to provide consistent guidance for municipal workers, developers and builders in implementing the requirements under the Statewide Small MS4 NPDES permit (2013-0001-DWQ).

The General Plan Public Services and Facilities Element includes policies and actions that require projects to demonstrate how storm water runoff will be detained or retained on-site and/or conveyed to the nearest drainage facility as part of the development review process. Specifically, Action PFS-4.5 includes development review requirements:

Action PFS-4.5 Development Review. Continue to require all development projects to:

- A. Demonstrate how storm water runoff will be detained or retained on-site and/or conveyed to the nearest drainage facility as part of the development review process and as required by the City's Small MS4 Phase 2 permit; and
- B. Analyze their drainage and stormwater conveyance impacts and either demonstrate that the City's existing infrastructure can accommodate increased stormwater flows, or make the necessary improvements to mitigate all potential impacts.

The warehouse project is required to submit detailed drainage plans, as well as the preparation of storm water plans including a SWPPP. The General Plan EIR determined that this impact was less than significant. The proposed development site is consistent with the General Plan light industrial uses, and would be required to implement all General Plan policies and actions relevant to storm water. This impact was adequately addressed in the EIR analysis contained in Chapter 3.9 of the General Plan EIR. The warehouse project has completed and submitted detailed water quality control plans that demonstrate consistency with the requirements of the Lathrop General Plan. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

Project Requirement(s)

Project Requirement Hydro-1: *The project applicant shall prepare a Storm Water Pollution Prevention Plan (SWPPP) that includes specific types and sources of stormwater pollutants, determine the location and nature of potential impacts, and specify appropriate control measures to eliminate impacts on receiving water quality from stormwater runoff. The SWPPP shall require treatment BMPs that incorporate, at a minimum, the required hydraulic sizing design criteria for volume and flow to treat projected stormwater runoff. The SWPPP shall comply with the most current standards established by the RWQCB, and the Lathrop Storm Water Program. Best Management Practices shall be subject to approval by the City Engineer and RWQCB.*

Project Requirement Hydro 2: *Prior to approval of the building permit, the project applicant shall submit a detailed Stormwater Control Plan constant with General Plan Action PFS-4.5, and the criteria set forth in the Lathrop Stormwater Program.*

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

No additional specific developments are proposed or would be approved as part of the CLSP Phase 2 update and municipal code amendments. These documents are being updated for consistency with the Lathrop General Plan and its vision for light industrial and open space land uses within the Phase 2 Project area. Additionally, all future projects within the Phase 2 Plan area would be subject to the General Plan requirements for hydrological studies, and policies and actions that limit hydrological impacts as detailed in the General Plan. This impact was adequately addressed in the General Plan EIR in Chapter 3.9. The General Plan EIR determined that this impact was less than significant. The proposed development site is consistent with the General Plan light industrial and open space uses identified for the Central Lathrop Specific Plan area and would be required to implement all General Plan policies and actions relevant to storm water. The proposed project would not result in a new or more severe impact than what was previously analyzed.

Response b): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

The proposed warehouse project would not result in the construction of new groundwater wells, nor would it increase the levels of groundwater pumping.

The City plans to utilize its existing groundwater wells to supply water in the future. As discussed in the City's UWMP the current estimated annual groundwater yield is 4,720 AFY and the City currently has no plans to install additional groundwater wells or expand

its groundwater production. Additionally, as described in the UWMP the City's ability to utilize groundwater wells will not be impacted by groundwater levels within the Tracy groundwater basin, and would not require the City to limit groundwater production to maintain a sustainable groundwater budget. Based on the available information, it is anticipated that 100% the City's current estimated groundwater yield is available for the planning horizon.

Development projects result in new impervious surfaces and could reduce stormwater infiltration and groundwater recharge. Infiltration rates vary depending on the overlying soil types. However, given the relatively large size of the groundwater basin, the areas of impervious surfaces added as a result of project implementation will not adversely affect the recharge capabilities of the local groundwater basin.

The General Plan EIR determined that impacts associated with groundwater and groundwater recharge would be less than significant. The proposed warehouse project is consistent with the uses and development intensities analyzed in the General Plan EIR, and would not result in any new or more severe impacts than those analyzed and disclosed in the General Plan EIR.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

No additional specific developments are proposed or would be approved as part of the CLSP Phase 2 update and municipal code amendments. These documents are being updated for consistency with the Lathrop General Plan and its vision for land uses within the Phase 2 Project area. Additionally, all future projects within the Phase 2 Plan area would be subject to the General Plan policies and actions that support groundwater recharge and water conservation. For example, Policy RR-8.6 supports the sustainable yield and calls for the City to operate the City's well system in such a manner as to not exceed the sustainable yield of the local groundwater aquifers. While policy RR-8.7 supports groundwater recharge through the promotion of and the use of permeable surface materials and areas of open space, in order to decrease surface runoff and promote groundwater recharge. Subsequent development projects proposed within the CLSP-2 area would be subject to these policies as well as additional policies and actions listed below that support groundwater conservation and recharge.

The General Plan EIR determined that this impact was less than significant. The proposed CLSP-2 amendment and municipal code amendments propose light industrial and open space uses consistent with the uses intended by the General Plan and would be required to implement all General Plan policies and actions relevant to storm water. This impact was adequately addressed in the EIR. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

Responses c), e): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

There are no rivers, streams, or water courses located on or immediately adjacent to the project site. As such, there is no potential for the project to alter a water course, which could lead to on or offsite flooding. Drainage improvements associated with the project site would be located on the project site, and the project would not alter or impact offsite drainage facilities.

Development of the warehouse project site would potentially increase local runoff production, and would introduce constituents into storm water that are typically associated with urban runoff. These constituents include heavy metals (such as lead, zinc, and copper) and petroleum hydrocarbons. BMPs consistent with the Multi-Agency Post-construction Stormwater Standards Manual provide consistent guidance for municipal workers, developers and builders in implementing the requirements under the Statewide Small MS4 NPDES permit (2013-0001-DWQ) will be applied to the proposed site development to limit the concentrations of these constituents in any site runoff that is discharged into downstream facilities to acceptable levels.

The warehouse project would be subject to all relevant General Plan policies and actions that aim to reduce water pollution from construction and new development, and protect and enhance natural storm drainage and water quality features. The policies include numerous requirements that would reduce the potential for implementation of the proposed project to result in increased water quality impacts. In addition, compliance with the Clean Water Act and regulations enforced by the RWQCB would ensure that construction-related impacts to water quality are minimized and projects comply with all applicable laws and regulations.

In order to ensure that stormwater runoff from the warehouse project site does not adversely increase pollutant levels in adjacent surface waters and stormwater conveyance infrastructure, Project Requirement Hydro 1 requires the preparation of a SWPPP. As described previously, the SWPPP would require the application of BMPs to effectively reduce pollutants from stormwater leaving the site during both the construction and operational phases of the project. Additionally, the warehouse project is subject to the project Requirement Hydro 2 that requires the project applicant to prepare and submit a Stormwater Control Plan. The warehouse project Stormwater Control Plan has been completed and submitted to the City for review as part of the entitlement application.

New development projects in the City of Lathrop are required to provide site-specific storm drainage solutions and improvements that are consistent with the overall storm

drainage infrastructure approach. The project applicant is required to submit a detailed storm drainage infrastructure plan to the City for review and approval. The warehouse project storm drainage infrastructure plans have been submitted to the City as part of the applicant's entitlement package. The warehouse project's storm drainage infrastructure plans demonstrate that there is adequate infrastructure capacity to collect and direct all stormwater generated on the project site within the on-site retention and detention facility to the City's existing stormwater conveyance system and demonstrate that the project would not result in on- or off-site flooding impacts.

The development of an onsite storm drainage system, the payment of all applicable development fees, and the implementation of Requirements Hydro 1 and Hydro 2 would ensure that this impact is constant with the City General Plan and stormwater requirements.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed in the General Plan EIR based on the measures incorporated into the warehouse project site plan.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

No additional specific developments are proposed or would be approved as part of the CLSP Phase 2 update and municipal code amendments. These documents are being updated for consistency with the Lathrop General Plan and its vision for land uses within the CLSP Phase 2 Project area.

The General Plan EIR determined that this impact was less than significant. The proposed development site is constant with the uses intended by the General Plan and would be required to implement all General Plan policies and actions relevant to storm water. This impact was adequately addressed in the EIR because future development projects are required to incorporate stormwater treatment measures into the site plan design. The proposed CLSP Phase 2 Amendment and Municipal Code Update project would not result in a new or more severe impact than what was previously analyzed.

Response d): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

Floodplain zones are determined by the Federal Emergency Management Agency (FEMA) and used to create Flood Insurance Rate Maps (FIRMs). These tools assist cities in mitigating flooding hazards through land use planning. FEMA also outlines specific regulations for any construction, whether residential, commercial, or industrial within

100-year floodplains. The warehouse site is not located within the FEMA designated 100-year floodplain.

Tsunamis are defined as sea waves created by undersea fault displacement. A tsunami poses little danger away from shorelines. As Lathrop is miles inland, the warehouse site is not exposed to flooding risks from tsunamis and adverse impacts would not result.

A seiche is a long-wavelength, large-scale wave action set up in a closed body of water such as a lake or reservoir. The warehouse project is not located near a closed body of water.

The warehouse project site is not located within the FEMA designated 100-year floodplain, or within inundation areas from tsunami or seiche events.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR because there are no seiche or tsunami related effects on the warehouse project site. The proposed project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

No additional specific developments are proposed or would be approved as part of the CLSP Phase 2 update and municipal code amendments. These documents are being updated for consistency with the Lathrop General Plan and its vision for land uses within the Phase 2 Project area.

The project site is not located within the FEMA designated 100-year floodplain, or within inundation areas from tsunami or seiche events. The General Plan EIR determined that this impact was less than significant. The Project is constant with the uses intended by the General Plan and would be required to implement all General Plan policies. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

XI. LAND USE AND PLANNING - Would the project:

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Physically divide an established community?			X	
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?			X	

RESPONSES TO CHECKLIST QUESTIONS

Response a): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

The General Plan establishes the City’s vision for future growth and development. Goal LU-1 of the General Plan aims to accommodate a mix and distribution of uses that meet the needs of the community. The land uses allowed under the General Plan (GP EIR Figure 2.0-2) provide opportunities for cohesive new growth at in-fill locations within existing urbanized areas of the city, as well as new growth adjacent to existing urbanized areas within the existing City Limits, and would not create physical division within the community. In addition, the General Plan’s Goal LU-5 aims to ensure that new development is compatible with and well integrated with existing development. The General Plan Land Use Map designates sites for a range of urban and developed uses as well as open spaces. The General Plan determined it would have a less than significant impact associated with the physical division of an established community. The warehouse project site is designated Limited Industrial on the 2022 General Plan Land Use Map. The proposed warehouse project is consistent with this land use designation, and is the type of development contemplated for this site by the General Plan. The proposed uses are consistent with the vision for future growth and development established by the General Plan.

The proposed warehouse project does not include any new areas designated for urbanization or other features that would divide existing communities. The warehouse project includes new roadways, including those designated for trucks to prevent land use conflicts and provide direct routes for truck trips that do not traverse residential areas. Dedicated truck access located at the very northeast corner of the warehouse property is the only access point for ingress and egress of truck traffic. Trucks are restricted from going south of this access point and will come from and to the north towards the Roth Road/Interstate 5 (I-5) interchange only. This roadway and drive access configuration ensures that truck traffic would be limited to the stretch of Manthey Road, west of

Interstate 5, and north of Golden Valley Parkway. This roadway segment does not traverse any residential areas or established communities.

As such, the proposed warehouse project is consistent with the adopted vision, allowed uses, and standards identified in the General Plan for the CLSP-2 area, and would not result in any new or a substantial increase in the severity of impacts, beyond those that were already addressed in the General Plan EIR.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR because the proposed warehouse project is consistent with the land use designation established for the project site and the CLSP-2 area. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

The CLSP-Phase 2 project area is part of a master planned area within CLSP Specific Plan Area. The General Plan provides specific guidance regarding the planning and development goals for the CLSP Phase 2 area.

The land uses allowed under the adopted 2022 Lathrop General Plan provide opportunities for cohesive new growth within existing urbanized areas of the city, as well as new growth adjacent to existing urbanized areas, but would not create physical division within the community.

As such, the proposed CLSP Phase 2 Amendment and Municipal Code Update project is consistent with the adopted vision, allowed uses, and standards identified within the General Plan, and would not result in any new or increased impacts, beyond those that were already addressed in the General Plan EIR.

The General Plan EIR determined that the CLSP phase 2 and Zoning Update would not physically divide an established community because light industrial uses would be setback from any residential areas and thus would be less than significant. This impact was adequately addressed in the EIR because the proposed project is consistent with the General Plan. The proposed project would not result in a new or more severe impact than what was previously analyzed in the General Plan EIR.

Response b): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

The General Plan was prepared in conformance with State laws and regulations associated with the preparation of general plans, including requirements for environmental protection.

Discussion of the General Plan’s consistency with State regulations, plans, and policies associated with specific environmental issues (e.g., air quality, traffic, water quality, etc.) is provided in the relevant chapters of the General Plan EIR.

The proposed warehouse project is required to be consistent with all applicable policies, standards, and regulations, including those land use plans, policies, and regulations adopted to mitigate environmental effects by the City as well as those adopted by agencies with jurisdiction over components of development projects. The proposed warehouse project does not propose to amend or change any policy or action that has been adopted to mitigate an environmental impact.

The proposed warehouse project is consistent with the adopted vision and uses identified within the General Plan, and would not result in any new or increased impacts, beyond those that were already addressed in the General Plan EIR.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR because the warehouse project is designed in a manner consistent with the applicable General Plan policies. The proposed project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE

As described above the General Plan was prepared in conformance with State laws and regulations associated with the preparation of general plans, including requirements for environmental protection.

The proposed CLSP Phase 2 Amendment and Municipal Code Update project is required to be consistent with all applicable policies, standards, and regulations, including those land use plans, policies, and regulations adopted to mitigate environmental effects by the City as well as those adopted by agencies with jurisdiction over components of development projects. The proposed updates to the CLSP and municipal code are required to bring these documents into consistency with the General Plan do not involve changes in any policy or program that has been adopted to mitigate an environmental impact. The proposed CLSP Phase 2 Amendment and Municipal Code Update project is consistent with the adopted vision and uses identified within the General Plan, and would not result in any new or increased impacts, beyond those that were already addressed in the General Plan EIR.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR because the CLSP Phase 2 amendments include policies designed to minimize land use incompatibility between the light industrial uses

and nearby residential uses. The proposed project would not result in a new or more severe impact than what was previously analyzed.

XII. MINERAL RESOURCES -- Would the project:

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?			X	
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?			X	

RESPONSES TO CHECKLIST QUESTIONS

Responses a), b): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE AND CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE AREA

According to the General Plan EIR, the most important mineral resources in the region are sand, and gravel and are located in the southwest portions of the city. There are no known mineral resources located in the CLSP Phase 2 Area, including the proposed warehouse site. As shown in Figure 3.11-1 (Mineral Resources Zones) of the City’s General Plan EIR, there are no mineral resources located in the CLSP Phase 2 Plan Area. Additionally, there is no land designated or zoned for mineral resources within the City limits or in the CLSP-2 Area. Given that no known mineral resources are located in the vicinity of the CLSP-2 Area, implementation of the proposed project would not result in the loss of availability of a known mineral resource or of a locally-important mineral resource recovery site.

The General Plan EIR determined that this impact was significant as the General Plan and development allowed under the Land Use Map would permanently convert undeveloped portions of Lathrop to urban uses and this may preclude the recovery of mineral resources from the southwestern portion of the city. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

XIII. NOISE -- WOULD THE PROJECT RESULT IN:

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			X	
b) Generation of excessive groundborne vibration or groundborne noise levels?			X	
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				X

BACKGROUND

An Acoustical Assessment for the Project was prepared by Saxelby Acoustics May 15, 2023. This report documents the results of an Acoustical Assessment completed for the proposed warehouse Project. The purpose of this Acoustical Assessment is to evaluate the Project’s potential construction and operational noise and vibration levels associated with the Project and determine the level of impact the Project would have on the environment.

Results from the Acoustical Assessment are described below. The full acoustical assessment report and noise data is included as Attachment F.

RESPONSES TO CHECKLIST QUESTIONS

Response a): Adequately addressed in the General Plan EIR.

EXISTING AMBIENT NOISE LEVELS

To quantify the existing ambient noise environment in the warehouse project vicinity, Saxelby Acoustics conducted continuous (24-hr.) noise level measurements locations near the warehouse project site. Noise measurement locations are shown in Attachment F Figure 2. A summary of the noise level measurement survey results is provided in Attachment F and included in Table Noise 1 below. Complete results of the noise monitoring are included in Attachment F Appendix B.

Table Noise 1: Summary of Existing Background Noise Measurement Data

Site	Date	L _{dn}	Daytime L _{eq}	Daytime L ₅₀	Daytime L _{max}	Nighttime L _{eq}	Nighttime L ₅₀	Nighttime L _{max}
LT-1: 660 Ft West of CL of Interstate 5	10/7/22	68	59	58	74	62	61	74
	10/8/22	66	59	57	72	60	59	71

REGULATORY CONTEXT

City of Lathrop General Plan N-1 POLICIES

N-1.3 Indoor Residential Noise Level. Ensure that new development does not result in indoor noise levels exceeding 45 dBA L_{dn} for residential uses by requiring the implementation of construction techniques and noise reduction measures for all new residential development.

N-1.4 Acoustical Studies. For projects that are required to prepare an acoustical study, the following stationery and transportation noise source criteria shall be used to determine the significance of those impacts.

A. Stationary and Non-Transportation Noise Sources – A significant impact will occur if the project results in an exceedance of the noise level standards contained in this element, or the project will result in an increase in ambient noise levels by more than 3 dB, whichever is greater.

B. Transportation Noise Sources -

1. Where existing traffic noise levels are less than 60 dB Ldn at the outdoor activity areas of noise-sensitive uses, a +5 dB Ldn increase in roadway noise levels will be considered significant;
2. Where existing traffic noise levels range between 60 and 65 dB Ldn at the outdoor activity areas of noise-sensitive uses, a +3 dB Ldn increase in roadway noise levels will be considered significant; and
3. Where existing traffic noise levels are greater than 65 dB Ldn at the outdoor activity areas of noise-sensitive uses, a + 1.5 dB Ldn increase in roadway noise levels will be considered significant.

N-1.15 Construction Noise. Require construction activities to reduce noise impacts on adjacent uses to the criteria identified in Table N-3, or, if the criteria cannot be met, to the maximum extent feasible complying with Title 15 of the LMC (Building and Construction) and use best practices. Construction activities outside of the permitted construction hours identified in the LMC may be approved on a case by case basis by the Building Official.

TABLE Noise 2: PERFORMANCE STANDARDS FOR STATIONARY NOISE SOURCES, INCLUDING AFFECTED PROJECTS
^{1,2,3,4} (N-3)

Noise Level Descriptor	Daytime (7 am to 10 pm)	Nighttime (10 pm to 7 am)
Hourly Leq, dB	55	45

1. Each of the noise levels specified above should be lowered by 5 dB for simple noise tones, noises consisting primarily of speech or music, or recurring impulsive noises. Such noises are generally considered to be particularly annoying and are a primary source of noise complaints.
2. No standards have been included for interior noise levels. Standard construction practices should, with the exterior noise levels identified, result in acceptable interior noise levels.
3. Stationary noise sources which are typically of concern include, but are not limited to, the following:

a) HVAC Systems	b) Cooling Towers/Evaporative Condensers
c) Pump Stations	d) Lift Stations
e) Emergency	f) Boilers
g) Steam Valves	h) Steam Turbines
i) Generators	j) Fans
k) Air Compressors	l) Heavy Equipment
m) Conveyor Systems	n) Transformers
o) Pile Drives	p) Grinder
q) Drill Rigs	r) Gas or Diesel Motors
s) Welders	t) Cutting Equipment
u) Outdoor Speaker	v) Blowers
4. The types of uses which may typically produce the noise sources described above include but are not limited to: industrial facilities, pump stations, trucking operations, tire shops, auto maintenance shops, metal fabricating shops, shopping centers, drive-up windows, car washes, loading docks, public works projects, batch plants, bottling and canning plants, recycling centers, electric generating stations, race tracks, landfills, sand and gravel operations, and athletic fields.

CONSTRUCTION

As described in the General Plan EIR (Chapter 3.12 – Noise), new development, maintenance of roadways, and installation of public utilities and infrastructure generally require construction activities. These activities include the use of heavy equipment and impact tools. Activities involved in construction would typically generate maximum noise levels ranging from 85 to 90 dB at a distance of 50 feet. Construction could result in periods of significant ambient noise level increases and the potential for annoyance. However, as described in the General Plan EIR the General Plan includes policies and actions that are intended to reduce noise associated with construction noise. Specifically, Policy N-1.15 would reduce noise associated with construction noise.

- N-1.15 Construction Noise. Require construction activities to reduce noise impacts on adjacent uses to the criteria identified in Table N-3, or, if the criteria cannot be met, to the maximum extent feasible complying with Title 15 of the LMC (Building and Construction) and use best practices. Construction activities outside of the permitted construction hours identified in the LMC may be approved on a case-by-case basis by the Building Official.

Additionally, the City of Lathrop Noise Ordinance sets general limits for community noise exposure. The Noise Ordinance standards are contained in Section 8.20 of the Lathrop Municipal Code. Construction activities are exempt from these regulations, when conducted according to Section 8.20.110, as outlined below.

Lathrop Municipal Code Section 8.20.110 (Construction of buildings and projects) *“It shall be unlawful for any person within a residential zone or within a radius of five hundred (500) feet therefrom, to operate equipment or perform any outside construction or repair work on buildings, structures or projects or to operate any pile driver, power shovel, pneumatic hammer, derrick, power hoist, or any other construction type device between the hours of ten p.m. of one day and seven a.m. of the next day, or eleven p.m. and nine a.m. Fridays, Saturdays and legal holidays, in such a manner that a reasonable person of normal sensitiveness residing in the area is caused discomfort or annoyance unless beforehand a permit therefore has been duly obtained from the office or body of the city having the function to issue permits of this kind. No permit shall be required to perform emergency work as defined in Sections 8.20.010 through 8.20.040. (Prior code § 99.40)”*

The General Plan EIR determined that Implementation of the proposed policies and actions of the General Plan will ensure noise impacts from construction are less than significant. The Proposed warehouse project is consistent with the uses and building intensities identified in the General Plan. There are no new or changed circumstances relevant to the warehouse as compared to the General Plan EIR that would result in a

new significant impact or a significant impact that is substantially more severe than significant impacts previously disclosed.

RESULTS AND ANALYSIS

The City of Lathrop General Plan limits stationary noise increases to 3 dBA, or the General Plan's Table N-3 standards, whichever is greater. The nighttime (10:00 p.m. to 7:00 a.m.) average noise level standard is 45 dBA Leq, as shown in Table Noise-2. Table Noise 1 indicates that the average ambient noise level during nighttime hours at the closest sensitive receptors to the southwest is 51 dBA Leq. At the sensitive receptors to the southwest, a project-generated noise level of 51 dBA Leq would result in a total noise level of 54 dBA Leq, resulting in a 3 dBA increase. Therefore, the nighttime noise level standard applicable to the proposed warehouse project is 51 dBA Leq.

The primary noise source associated with operation of the warehouse project is truck and automobile circulation and loading docks. Single family residential land uses are located to the north, west, and south of the project, Lathrop High School is located to the west of the warehouse project, and Interstate 5 (I-5) is located directly east of the project. The warehouse project is located northwest of the intersection of South Manthey Road and Dos Reis Road.

The proposed warehouse project is projected to generate 2,798 daily automobile trips with 203 trips in the morning peak hour and 680 daily heavy truck trips with 95 trips in the morning peak hour (TJKM). Parking lot movements are predicted to generate a sound exposure level (SEL) of 71 dBA SEL at 50 feet for cars and 85 dBA SEL at 50 feet for trucks. It was assumed that the morning peak hour could occur during nighttime (10:00 p.m. to 7:00 a.m.) hours.

Saxelby Acoustics conducted noise level measurements at the existing Ashley Facility located at 18290 S Harlan Road in Lathrop, California. Measurements were conducted of the loading dock area during a weekday peak hour of use. Activities during the peak hour include truck arrival/departures, truck idling, truck backing, air brake release, passenger vehicle trips to and from docks, and operation of forklifts. Loading dock activity was found to generate continuous average noise levels of approximately 57 dBA Leq at the edge of the truck maneuvering lanes, approximately 120 feet from the façade of the warehouse building at the center of the loading area. Loading dock activity was assumed to operate at this level continuously during nighttime (10:00 p.m. to 7:00 a.m.) hours.

Saxelby Acoustics used the SoundPLAN noise prediction model. Inputs to the model included sound power levels for the proposed equipment, existing and proposed buildings, terrain type, and locations of sensitive receptors. These predictions are made in accordance with International Organization for Standardization (ISO) standard 9613-

2:1996 (Acoustics – Attenuation of sound during propagation outdoors). ISO 9613 is the most commonly used method for calculating exterior noise propagation. Figure 3 (in Attachment F) shows the noise level contours resulting from operation of the project.

As shown described in the Noise Report, (Attachment F) the proposed warehouse project is predicted to generate noise levels of up to 45 dBA Leq at the nearest residences to the southwest and 39 dBA Leq at the residences to the northeast, resulting in a maximum increase of 0.9 dBA at nearby residences. This complies with the adjusted nighttime noise level standard of 51 dBA Leq and limit of a 3 dBA increase. Therefore, no additional noise control measures are required to achieve compliance with the City of Lathrop noise level standards.

The proposed warehouse project is predicted to comply with the City of Lathrop noise level standards with no additional noise control measures. The proposed project is consistent with the adopted vision and uses identified within the General Plan, and would not result in any new or increased impacts, beyond those noise impacts that were already addressed in the General Plan EIR.

Project Requirement(s)

Requirement N-1: Implement General Plan Policy N-1.15, and Lathrop Municipal Code Section 8.20.110 (Construction of buildings and projects).

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

No additional specific developments are proposed or would be approved as part of the CLSP Phase 2 update and municipal code amendments. These documents are being updated for consistency with the Lathrop General Plan and its vision for land uses within the Phase 2 Project area. Additionally, all future projects within the Phase 2 Plan area would be subject to the General Plan requirements for noise studies, and policies and actions that limit noise. This impact was adequately addressed in the EIR because any future development within the CLSP Phase 2 area would be required to conduct a site-specific noise analysis to ensure compliance with the standards established by the General Plan. The proposed CLSP Phase 2 Amendment and Municipal Code Update project is consistent with the uses and standards identified in the General Plan and would not result in a new or more severe impact than what was previously analyzed.

Response b): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

As describe in the General Plan EIR Impact 3.12-5 construction activities facilitated by the General Plan may include demolition of existing structures, site preparation work, and excavation of below grade levels, foundation work, and new building erection. Demolition for an individual site may last several weeks and at times may produce substantial vibration. Excavation for underground levels may also occur on some project sites and vibratory pile driving could be used to stabilize the walls of the excavated area. Piles or drilled caissons may also be used to support building foundations.

No pile driving is proposed or would be anticipated for construction activities associated with the warehouse development, additionally no existing structures are located onsite so no demolitions are required.

The General Plan EIR (EIR) determined that this impact was less than significant. This impact was adequately addressed in the EIR because the project is consistent with the General Plan and is subject to all best practices related to construction noise included in the General Plan. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

As describe in the General Plan EIR Impact 3.12-5 construction activities facilitated by the General Plan may include demolition of existing structures, site preparation work, and excavation of below grade levels, foundation work, pile driving, and new building erection. Demolition for an individual site may last several weeks and at times may produce substantial vibration. Excavation for underground levels may also occur on some project sites and vibratory pile driving could be used to stabilize the walls of the excavated area. Piles or drilled caissons may also be used to support building foundations.

No additional specific developments are proposed or would be approved as part of the CLSP Phase 2 update and Municipal Code amendments. These documents are being updated for consistency with the Lathrop General Plan and its vision for land uses within the Phase 2 Project area. Additionally, all future projects within the Phase 2 Plan area would be subject to the General Plan requirements for noise studies, and policies and actions that limit noise and vibration such as those presented above in General Plan Action N-2d. The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

Response c): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE, AND CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

As described in the General Plan EIR (Chapter 3.9 – Hazards) the northernmost portion of the city is located within the airport influence area (AIA) for the Stockton Metropolitan Airport identified in the ALUCP. The lands within the City Limits that are located in the AIA are not within the Airport’s noise exposure contours.

The General Plan EIR (Chapter 3.12 Noise) determined the General Plan area is not located within two miles of a public or private airport. Therefore item “c” was not further discussed. The proposed project would not expose people in the Project site are or within the Phase 2 Plan Area to excessive noise levels from aircrafts. As such, this topic does not require further analysis. The proposed project would not result in a new or more severe impact than what was previously analyzed.

XIV. POPULATION AND HOUSING -- WOULD THE PROJECT:

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?			X	
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?			X	

RESPONSES TO CHECKLIST QUESTIONS

Response a), b): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

The proposed limited industrial land uses and the proposed warehouse site development would not directly induce population growth because no new housing units are proposed as part of the project, and does not includes any residential site uses. The proposed warehouse would create local jobs, however, they would not generate significant employment and would not expand the job base such that notable population growth may occur and would not result in growth over what has been planned by the Lathrop General Plan because the types of land uses proposed by the project are consistent with the uses analyzed in the General Plan EIR, at consistent densities and employment generation levels.

The employment growth that would occur as a result of approval and development of the proposed warehouse project was considered in the General Plan EIR. The proposed project is consistent with the land use designation that was addressed in the General Plan EIR, and the environmental effects of the employment growth generated by the project were considered in the analysis of buildout of the General Plan area. Additionally, as described in relevant sections of this document, employment growth attributable to the proposed warehouse project would not result in any significant site-specific environmental impacts related to other environmental topics. There are no aspects of the project as compared to the General Plan EIR that would result in a new significant impact or an impact that is more severe than disclosed in the EIR.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

As described previously the employment growth that would occur as a result of future limited industrial project approvals was considered in the General Plan EIR. The proposed CLSP Phase 2 Plan Area is consistent with the land use designation that was addressed in the General Plan EIR, and the environmental effects of the employment growth generated by the project were considered in the analysis of buildout of the General Plan area. Additionally, as described in relevant sections of this document, employment growth attributable to the proposed project would not result in any significant site-specific environmental impacts related to other environmental topics. There are no aspects of the project as compared to the General Plan EIR that would result in a new significant impact or an impact that is more severe than disclosed in the EIR.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

XV. PUBLIC SERVICES

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
A) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i) Fire protection?			X	
ii) Police protection?			X	
iii) Schools?			X	
iv) Parks?			X	
v) Other public facilities?			X	

RESPONSES TO CHECKLIST QUESTIONS

Response a): i) – v): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE AND CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

i, ii) Police and fire protection

Development of the warehouse site and CLSP-2 area for Limited Industrial uses was analyzed in the City’s General Plan EIR. The City’s General Plan EIR analyzed impacts to public services which may occur as a result of buildout of the General Plan.

The General Plan (Public Services and Facilities Element) includes a range of policies and actions to ensure that public services are provided in a timely fashion, are adequately funded, are coordinated between the City and appropriate service agency, and that new development funds its fair share of services. Specifically, Action PFS-1e requires new development to pay its fair share of the cost of on and offsite community services and facilities that are necessary to serve the new development project.

The General Plan includes policies to ensure that fire protection and law enforcement services keep pace with new development. The proposed project is consistent with the uses envisioned for the project area by the General Plan. Development of the Project does not propose, and would not require the development of a new facility or modifications of an existing facility at this time. As such, there are no additional environmental impacts, beyond those disclosed in the relevant chapters of the General Plan EIR that are anticipated to occur.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR because potential new demand for these public services were analyzed. The proposed project would not result in a new or more severe impact than what was previously analyzed.

iii) Schools: Adequately addressed in the General Plan EIR.

WAREHOUSE SITE AND CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

The Project would not require the construction of a new school facility and does not propose the construction of a new school facility which may cause substantial adverse physical environmental impacts. Development of the Project is expected to increase local employment, and some portion of these employees would have school-aged children that could attend either School District depending on where employees choose to live.

School Districts collect impact fees from new developments under the provisions of SB 50. Payment of the applicable impact fees by the project applicant, and ongoing revenues that would come from taxes, would fund capital and labor costs associated with school services. The adequacy of fees is reviewed on an annual basis to ensure that the fee is commensurate with the service.

The proposed warehouse project is consistent with the General Plan. Development of the project does not propose, and would not require the development of a new school facility or modifications of an existing facility at this time. As such, there are no additional environmental impacts, beyond those disclosed in the relevant chapters of the General Plan EIR.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

iv) Parks: Adequately addressed in General Plan EIR.

WAREHOUSE SITE AND CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

As described in the General Plan EIR, growth accommodated under the General Plan would include a range of uses that would increase the population of the city and also attract additional workers and tourists to the city. This growth would result in increased demand for parks and recreation facilities.

The warehouse project would result in the construction of a limited industrial warehouse building (consistent with the General Plan land use designation and standards) with no proposed recreational facilities. The warehouse project would not directly introduce new

residents to the City as no housing is proposed as part of the project; as such, the project would not be anticipated to result in new residents which would utilize nearby neighborhood parks, regional parks, or other recreational facilities. Employees of the warehouse are generally not anticipated to utilize nearby park areas. The proposed project would not significantly increase the use of existing parks such that substantial physical deterioration of the facility would occur or be accelerated.

The proposed warehouse project is consistent with the General Plan. Development of the Project does not propose, and would not require the development of a park facility or modifications of an existing facility at this time. As such, there are no additional environmental impacts, beyond those disclosed in the relevant chapters of the General Plan EIR that are anticipated to occur.

The EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR because potential new demand for these public services were analyzed. The proposed project would not result in a new or more severe impact than what was previously analyzed.

vi) Other Public Facilities: Adequately addressed in the General Plan EIR.

WAREHOUSE SITE AND CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

As described in the General Plan EIR (Chapter 3.13) development and growth facilitated by the General Plan would result in increased demand for public services, including, libraries, and other public and governmental services. The General Plan includes policies and actions to ensure that public services are provided at acceptable levels and that the City will maintain and implement public facility master plans, in collaboration with appropriate outside service providers and other agencies, to ensure compliance with appropriate regional, state, and federal laws and to provide efficient public facilities and services to Lathrop.

The proposed project would not directly lead to population growth and does not propose any residential uses. Additionally, the Project is consistent with the General Plan. Development of the project does not propose, and would not require the development of other public facilities or modifications of an existing facility at this time. As such, there are no additional environmental impacts, beyond those disclosed in the relevant chapters of the General Plan EIR that are anticipated to occur.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

XVI. RECREATION

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?			X	
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?			X	

RESPONSES TO CHECKLIST QUESTIONS

Responses a), b): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE

The proposed warehouse project does not include any residential uses and would not directly lead to population growth. Demand for parks and recreational facilities within the City would not increase and the use of the City’s existing parks and recreation system would remain substantially the same compared to the existing conditions. Development of the project does not propose, and would not require the development of other recreation facilities or modifications of an existing facility. As such, there are no additional environmental impacts, beyond those disclosed in the relevant chapters of the General Plan EIR that are anticipated to occur. The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

The CLSP Phase 2 Plan Area does not include any residential uses and would not directly lead to population growth. The CLSP-2 amendment would be consistent with the General Plan and would retain all open space and park uses identified by the General Plan within the CLSP-2 area. Demand for parks and recreational facilities within the City would not increase and the use of the City’s existing parks and recreation system would remain substantially the same compared to the existing conditions. The CLSP Phase 2 Amendment and Municipal Code Update does not propose, and would not require the development of other recreation facilities or modifications of an existing facility. However, it is noted that the CLSP-2 includes an extensive network of proposed bicycle and pedestrian facilities, and a proposed multi-use path adjacent to the San Joaquin River levee. As such, there are no additional environmental impacts, beyond those disclosed in

the relevant chapters of the General Plan EIR that are anticipated to occur. The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

XVII. TRANSPORTATION/TRAFFIC -- Would the project:

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?			X	
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?			X	
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			X	
d) Result in inadequate emergency access?			X	

Information included in the section is further detailed in Attachment H, Traffic Impact Analysis (TIA) Prepared by: TJKM, August 9, 2023.

RESPONSES TO CHECKLIST QUESTIONS

Responses a): b): Impact adequately addressed in the General Plan EIR.

VMT Impacts

Chapter 3.14 of the General Plan EIR includes a detailed analysis of VMT impacts associated with buildout of the Lathrop General Plan. The General Plan would result in increased VMT for employment-generating land uses and would also result in an increase in total VMT in comparison to the existing condition as well as in comparison to the baseline scenario. The General Plan is expected to result in VMT per employee exceeding 85 percent of baseline for employment-related land uses. This result is due to the change in the balance between jobs and housing in Lathrop that result from the General Plan, which is based upon the large increases in employment shown in Table 3.14-7 of the General Plan EIR.

WAREHOUSE SITE:

As described in the General Plan EIR, the General Plan goals, policies, and implementation measures will achieve meaningful reductions in VMT generated by land uses within the City however, this impact was found to be significant and unavoidable.

The warehouse project is located in TAZ #1744 of the SJCOG model. Currently, TAZ #1744 has five employees coded. The project will add a total of 1,295 employees. There

are three types of employment in this project; warehouse, office, and retail. From the project’s Site Plan, there are 1,400,000 square feet of warehouse, 25,000 square feet of office, and 100,000 square feet of retail. In order to make accurate employment estimates for the proposed warehouse project, the Traffic Study relied on information contained in the Southern California Council of Governments (SCAG) employment density study, which is considered an industry benchmark for employment ratios in California. The SCAG study finds that there are a median of 1,225 square feet per employee for warehouses, 466 square feet per employee for offices, and 1,023 square feet per employee for regional retail. Thus, it is expected that 1,143 new employees will come from the warehouse, 98 employees from the office, and 54 employees for the retail portion. 1,295 employees in the industrial land use category (which is what the SJCOG model uses for warehouses) was added in TAZ #1744 and the project year traffic model was rerun.

Table Cir-1: VMT per Employee Comparison

TAZ	Base Year Average Daily VMT per Employee (per SJCOG Model)	Regional Average (per SJCOG Model)	15% Below Regional Average (per SJCOG Model)	Base Year <u>Plus</u> Project Average Daily VMT per Resident (per Model run)
1744	10.48	19.1	16.2	15.43

TJKM TIA 2023.

As shown in Table Cir-1, the base year average daily VMT per employee for TAZ #1744 is 10.48. Adding in the project’s 1,295 employees brought the daily VMT per employee to 15.43, an increase of 4.95. The project’s 15.43 daily VMT per employee is lower than the San Joaquin County VMT threshold of 16.2. As such, the TIA found that the VMT impacts for the Ashley warehouse project are less-than-significant for the base year, and thus no mitigation is required for VMT impacts attributable to this warehouse project.

The proposed warehouse project is consistent with the uses and development intensities analyzed in the General Plan EIR. As such, the increase in per employee VMT that would result from project implementation was analyzed and accounted for in the General Plan EIR. The City determined that this was a significant and unavoidable impact, and adopted Findings of Fact and a Statement of Overriding Considerations.

Cumulative impacts associated with buildout of the General Plan Planning area were assumed in the General Plan EIR. The EIR prepared for the General Plan included limited industrial site uses consistent with what has been proposed by the warehouse project as well and these included in the CLSP Phase 2 update. The proposed project is consistent with uses identified for the project site by the Lathrop General Plan. This impact was

adequately addressed in the General Plan EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed. There are no peculiar or site specific impacts related to VMT that differ from the analysis and conclusions contained in the General Plan EIR.

Relevant Plans, Policies, and Programs Related to the Transportation Network

As described in the Lathrop General Plan EIR the City adopted a Bicycle Transportation Plan that establishes the City's goals and objectives for bicycle travel. The Bicycle Transportation Plan establishes standards for bicycle facilities and identifies planned bicycle network facilities to address the City's bicycle needs. The General Plan Circulation Element contains Policy CIR-2.1 and Implementation Actions CIR-2a and CIR-2g, which support bicycle and pedestrian routes and facilities and creating an active transportation plan supporting the development and funding of bicycle and pedestrian networks. Furthermore, the General Plan contains additional policies and implementing actions that support access to and the performance of transit, bicycle, and pedestrian facilities. Further, the Plan includes mixed-use development that is supportive of active transportation and transit.

The General Plan includes policies and actions that help make the circulation system, including transit, bicycle, and pedestrian facilities, consistent with applicable programs, plans, policies, and ordinances and address the needs of growth accommodated by the General Plan.

Although the General Plan policies and actions help make the circulation system, including transit, bicycle, and pedestrian facilities, consistent with applicable programs, plans, policies, and ordinances and address the needs of growth accommodated by the General Plan, increasing vehicle traffic may increase the number of collisions on Lathrop roadways, including collisions involving transit users, bicyclists, and pedestrians. The General Plan goals, policies, and implementation measures may achieve meaningful reductions in collisions within the City. The City at this time cannot demonstrate that collisions will be reduced to the degree that it meets these thresholds. Collision reduction also depends on factors such as user behavior, demographic change, household preferences for travel, the cost of fuel, and the competitiveness of other transportation modes relative to driving. Therefore, this impact was considered *significant and unavoidable* in the General Plan EIR.

The proposed warehouse project does not conflict with any of the City's adopted plans or programs related to the transportation network, nor would the project hinder ongoing or future efforts to implement transportation improvements throughout Lathrop. This impact was adequately addressed in the General Plan EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed. There are

no peculiar or site specific impacts that differ from the analysis and conclusions contained in the General Plan EIR.

Pedestrian Impacts

Pedestrian access to the warehouse project site is facilitated by new sidewalks along Dos Reis Road and Manthey Road, and paved walkways within the parking lot and crosswalks. The proposed warehouse project does not conflict with existing and planned pedestrian facilities; therefore, the impact to pedestrian facilities is less than significant. The proposed project is consistent with uses identified for the project site by the Lathrop General Plan. This impact was adequately addressed in the General Plan EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

Bicycle Impacts

There are no existing bicycle facilities on De Lima Road, Manthey Road and Dos Reis Road. The project does not conflict with existing and planned bicycle facilities; therefore, the impact to bicycle facilities is less than significant. The proposed project is consistent with uses identified for the project site by the Lathrop General Plan. This impact was adequately addressed in the General Plan EIR. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

Transit Impacts

The project site is within a 3/4 mile of two San Joaquin RTD bus stops, located on the northwest corner of Lathrop Road/Harlan Road and in front of the Save Mart. Due to the lack of development north of Spartan Way, there are sidewalk gaps from the proposed project site to the bus stops. As development in the area increases, sidewalks should be installed to close the gap in pedestrian facilities. Impacts to transit service are expected to be less than significant. The proposed warehouse project is consistent with uses identified for the project site by the Lathrop General Plan. This impact was adequately addressed in the General Plan EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

No additional development is proposed or would be approved at this time. The proposed CLSP-2 Amendment and municipal code amendments are consistent with the land uses and vision described in the General Plan and would be consistent with impacts previously identified. Cumulative impacts associated with buildout of the General Plan Planning area were assumed in the General Plan EIR. The EIR prepared for the General Plan evaluated the impacts of limited industrial site uses consistent with what has been proposed and

included in the CLSP Phase 2 update. The proposed project is consistent with uses identified for the project site by the Lathrop General Plan. This impact was adequately addressed in the General Plan EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

Responses c, d): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

Site Access & On-Site Circulation

Vehicular & Truck access to the Property is proposed via four (4) access drives; one (1) access drive on Manthey Rd at the far northeast corner is dedicated for truck ingress/egress onto and from the Project. One (1) public and employee vehicular access mid-block on Manthey Rd is proposed for ingress/egress of the public and employees' access to the retail and office. Two (2) additional access points are proposed along Dos Reis Rd with the most eastern access proposed for public vehicular access to the retail and customer pick-up areas located at the southeast corner of the building. A fourth and final access is closed to the public and trucks and is reserved only for emergency vehicle access.

The warehouse site plan (included on Figure 3) orients the warehouse project to Manthey Rd. Public access to the Property will be provided via Manthey and Dos Reis Roads in the locations shown on the site plan. These points of access and internal circulation provide good access to users, employees, and customers, and serve to keep vehicle traffic and heavy truck traffic separated.

Dedicated truck access located at the very northeast corner of the property is the only access point for ingress and egress of truck traffic. Trucks are restricted from going south of this access point and will come from and to the north towards the Roth Road/Interstate 5 (I-5) interchange only.

The site plan identifies approximately 2,046 parking spaces provided throughout the development. Parking for trucks and employees is provided behind secured, gated access points as depicted on the site plan. Approximately 1,104 trailer parking spaces are provided behind secured, gated access points.

The proposed driveway locations, design, and sight distance are all adequate to ensure operational safety and emergency vehicle access.

The site plan shows all proposed pedestrian facilities on the project frontage and connectivity from Manthey Road to the retail showroom entrance. The project site plan does show four crosswalks connecting the passenger vehicle parking lot to the retail

showroom. The site plan shows two bike rack locations, one on the south side of the building and one on the east side. Sidewalks are planned to be provided within the passenger vehicle parking lot and along the eastern frontage of the building. Additionally, it appears that one sidewalk will front the Intersection #15 entrance (on the north side) that will connect the showroom to Manthey Road. The internal circulation on the project site is considered adequate and no specific site safety hazards have been identified by the TIA. The proposed project is consistent with uses identified for the project site by the Lathrop General Plan. This impact was adequately addressed in the General Plan EIR as demonstrated in the site specific traffic analysis. The proposed project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

No additional development is proposed or would be approved at this time. The proposed CLSP-2 Amendment and municipal code amendments are consistent with the land uses and vision described in the General Plan and would be consistent with impacts previously identified. No new impacts or impacts above and beyond what was previously analyzed would occur.

XVIII. TRIBAL CULTURAL RESOURCES

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
<p>Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:</p>				
<p>a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?</p>			X	
<p>b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resources to a California Native American tribe.</p>			X	

RESPONSES TO CHECKLIST QUESTIONS

Responses a), b): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

As described previously in the Cultural Recourse section of this report, as with any projects the include ground disturbing activities there is a potential for the discovery of prehistoric, ethnohistoric, or historic archaeological sites that may meet the definition of Tribal Cultural Resources (TCRs). Although no TCRs have been documented on the project site, the project is in a region where cultural resources have been recorded and there remains a potential that undocumented archaeological resources that may meet the TCR definition could be unearthed or otherwise discovered during ground-disturbing and construction activities. Due to the possible presence of undocumented TCRs within the project site, construction-related impacts on tribal cultural resources may occur.

The warehouse project would be required to implement all policies and actions included in the General Plan these include Action RR-3b that requires all new development, infrastructure, and other ground-disturbing projects to comply with the following conditions in the event of an inadvertent discovery of cultural resources or human remains:

- a) If construction or grading activities result in the discovery of significant historic or prehistoric archaeological artifacts or unique paleontological resources, all

work within 100 feet of the discovery shall cease, the Community Development Director shall be notified, the resources shall be examined by a qualified archaeologist, paleontologist, or historian for appropriate protection and preservation measures; and work may only resume when appropriate protections are in place and have been approved by the Community Development Director; and

- b) If human remains are discovered during any ground disturbing activity, work shall stop until the Community Development Director and the San Joaquin County Coroner have been contacted. If the human remains are determined to be of Native American origin, the Native American Heritage Commission and the most likely descendants shall be consulted; and work may only resume when appropriate measures have been taken and approved by the Community Development Director.

The implementation of these requirements would require appropriate steps to preserve and/or document any previously undiscovered resources that may be encountered during construction activities, including human remains, and would be consistent with CEQA Guidelines Section 15064.5. The warehouse project would be subject to all applicable policies and actions included in the General Plan EIR intended to minimize and mitigate potential impacts to tribal resources. The General Plan EIR (EIR) determined that this impact was less than significant because any future accidental discovery of a tribal cultural resource would be protected via implementation of the General Plan policy requirements. This impact was adequately addressed in the EIR because there are no known tribal cultural resources on the warehouse project site, and protective measures for the inadvertent discovery of previously unknown resources are in place. The proposed project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

As described previously the General Plan EIR identified various cultural and historic resources within the City.

Additionally, as described in the General Plan EIR the City of Lathrop conducted consultations with Native American Tribes under Senate Bill 18 (Chapter 905, Statutes of 2004), which requires local governments to consult with Tribes prior to making certain planning decisions. Senate Bill 18 (SB 18) also requires consultation and notice for a general and specific plan adoption or amendments with the purpose of preserving or mitigating impacts on cultural places that may be affected. The City also conducted Tribal consultations under the California Environmental Quality Act (CEQA) ((Public

Resources Code section 21080.3.1 subdivisions (b), (d) and (e)), also known as AB52, provisions which requires consulting for projects within the City of Lathrop's jurisdiction and that are within the traditional territory of the Tribal Organizations who have previously requested AB52 consultations with the City.

Tribal response during the General Plan EIR process included the California Miwok Tribe letter which emphasized that the City of Lathrop engage in government-to-government consultation with the Tribe. The letter also mentioned that there are significant Tribal cultural resources within the City. The Northern Valley Yokut/Ohlone/Bay Mewuk provided mitigation recommendations for when specific projects are implemented in the future and emphasized the need to hire Tribal monitors during construction activities. No further comments or response were received.

All future development projects within the CLSP-2 Area would be required to follow development requirements, including compliance with local policies, ordinances, and applicable permitting procedures related to protection of tribal resources. Subsequent projects would be required to prepare site-specific project-level analysis to fulfill CEQA requirements.

The CLSP-2 Amendment and municipal code amendments do not directly propose any changes that would include adverse impacts to historic, archaeological, or cultural resources. Future developments within the CLSP Phase 2 project area may occur which could affect both known and yet to be identified historic and archaeological resources. The Lathrop General Plan includes policies and actions that would both reduce impacts to and conserve cultural, historic, and archaeological resources. Implementation of the policies and actions listed below, combined with CEQA review requirements, and would ensure that impacts to historic and archaeological resources are less than significant. As the City considers future development and infrastructure projects, each project will be evaluated to ensure conformance with the City's General Plan, Municipal Code, and applicable State and local regulations. Development and infrastructure projects would also be analyzed individually for potential environmental impacts as required by CEQA.

All future development within the CLSP Phase 2 Project area would be subject to all relevant General Plan policies and actions that provide protections for cultural, historical, and tribal resources. As future developments are proposed within the CLSP Phase 2 area they would be developed under a Limited Industrial use category (consistent with the General Plan), and would be required to be analyzed for site specific impacts consistent with their project descriptions and site plans. Future projects would be required to be reviewed in compliance with the General Plan and municipal code requirements and the California Environmental Quality Act (CEQA). No additional development is proposed or would be approved at this time. The proposed CLSP-2 Amendment and municipal code amendments are consistent with the land uses and

vision described in the General Plan and would be consistent with impacts previously identified. No new impacts or impacts above and beyond what was previously analyzed would occur.

XIX. UTILITIES AND SERVICE SYSTEMS -- WOULD THE PROJECT:

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?			X	
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?			X	
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the projects projected demand in addition to the providers existing commitments?			X	
d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reductions goals?			X	
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?			X	

RESPONSES TO CHECKLIST QUESTIONS

Responses a), Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

Water: As described in the General Plan EIR, development and growth in the City under the General Plan would result in increased demand for water supplies, including water conveyance and treatment infrastructure. The General Plan includes policies and actions to ensure that water supplies are provided at acceptable levels and to ensure that development and growth does not outpace the provision of available water supplies.

The General Plan includes a range of policies designed to ensure an adequate water supply for development and to minimize the potential adverse effects of increased water use. Projected water demands associated with General Plan buildout would not exceed the projected available water supplies during normal years, and the General Plan includes a comprehensive set of goals, policies, and actions to ensure an adequate and reliable source of clean potable water. Nevertheless, as described in the WSA prepared for the General Plan EIR, it is anticipated that the City, with implementation of the General

Plan, would have a slight deficiency in water supplies during multiple dry years 3 and 4 at buildout.

It is anticipated that water supply infrastructure will need to be extended to serve development of the site and these services are immediately available at the project boundary. All development in the city would be required to connect to existing water distribution infrastructure in the vicinity of each site, pay the applicable water system connection fees, and pay the applicable water usage rates. Future projects may be required to implement site specific and limited off-site improvements to the water distribution system in order to connect new project sites to the existing water infrastructure network. No new or expanded facilities are proposed or would be required from implementation of the proposed project. The project would include new employees and site uses consistent with the General Plan land uses and standards.

This impact was adequately addressed in the General Plan EIR because the infrastructure needed to serve buildout of the General Plan was fully analyzed in the General Plan EIR, and the proposed warehouse project is consistent with the development assumptions analyzed in the EIR. The proposed warehouse project would not result in a new or more severe impact than what was previously analyzed.

Wastewater: As described in the General Plan EIR, wastewater treatment facilities that serve the City include the MWQCF and the LCTF. These facilities are described below.

The City of Lathrop owns 14.7 percent of the MWQCF capacity by contract with the City of Manteca. The City does not participate in the operation of the facility, nor does it receive recycled water from the facility. As discussed in the City's Municipal Service Review and Sphere of Influence Plan, and as listed in Table Utilities 1-, the City is allocated 1.45 mgd of the total 9.87 mgd facility capacity. The MWQCF is permitted for future expansions of up to 26.97 mgd, of which the City would be allocated a maximum of 14.7 percent capacity or 3.97 mgd. Treatment at the MWQCF consists of primary sedimentation followed by roughing biotowers, conventional activated sludge, secondary clarification, tertiary filtration, and ultraviolet disinfection. Disinfected tertiary effluent is discharged to the San Joaquin River. A portion of the secondary effluent is not disinfected and is used to irrigate medians and agricultural fields.

TABLE UTILITIES 1- FUTURE SEWER CAPACITY, MGD

Year	2016	2020	2025	2030	2035	2040	BUILDOUT 2050
<i>DEMAND</i>							
<i>MWQCF Projected ADWF</i>	1.08	1.23	1.36	1.37	1.38	1.39	1.47
<i>LCTF Projected ADWF</i>	0.61	1.33	2.18	3.03	3.67	4.30	5.61
<i>ADWF Total</i>	1.69	2.56	3.54	4.40	5.05	5.69	7.08
<i>TREATMENT CAPACITY</i>							
<i>MWQCF</i>	1.45	1.45	1.45	1.45	1.45	1.45	1.45
<i>MWCQF Improvements</i>	0	0	0	0	0	0	0
<i>LCTF</i>	0.75	0.75	0.75	0.75	0.75	0.75	0.75
<i>LCTF Phase I</i>	0.25 ^(a)	0.25	0.25	0.25	0.25	0.25	0.25

<i>LCTF Phase III</i>		Not Complete ^(c)	2.0	2.0	2.0	2.0	2.0
<i>LCTF Phase IV(d)</i>					2.0	2.0	2.0
<i>Treatment Total</i>	2.45	3.78	5.45	5.45	7.45	7.45	7.45

SOURCE: LATHROP GENERAL PLAN EIR; WEST YOST ASSOCIATES, 2018. NOTES:

(A) COMPLETED IN 2017

(B) FACILITY IS SUBSTANTIALLY COMPLETED AS OF JUNE, 2018. FULL TREATMENT CAPACITY OF 1.5 MGD WILL BE AVAILABLE WHEN RIVER DISCHARGE BEGINS OPERATION IN LATE 2022, AS STORAGE AND DISPOSAL LIMITS WILL BE ELIMINATED, BUT WILL BE REDUCED TO 1.0 DUE TO HIGH BOD LOADING

(C) FACILITY IS UNDER DESIGN AND WILL BE AVAILABLE BY 2024

(D) LCTF PHASE IV IS EXPECTED TO BE AVAILABLE BY 2035

The LCTF is City-owned but operated by a private contractor, Veolia Water NA. The LCTF's treatment capacity was expanded to 2.5 mgd, with the completion of an expansion in 2018 and the capacity will be increased to 5.0 mgd with an expansion expected to be completed in 2025. The LCTF is planned to be expanded to a future permitted capacity of 6.0 mgd.

Wastewater treatment and disposal at the LCTF is regulated under the California Regional Quality Control Board Central Valley Region Waste Discharge and NPDES Requirements. LCTF applies the effluent to land for irrigation purposes as well as to the San Joaquin River through a recently constructed recycled water river discharge. The wastewater treatment processes at the LCTF includes secondary treatment, tertiary infiltration, and disinfection prior to storage and disposal. The LCTF produces disinfected

tertiary recycled water suitable for irrigation at parks, landscape strips, median islands, pond berms, and agricultural fields.

Wastewater treatment processes at the LCTF include secondary treatment, tertiary filtration, disinfection, and reuse for irrigation of agricultural and landscape use areas. The following major components make up the LCTF:

- Raw wastewater undergoes screening and grit removal prior to entering the influent pump station. A 0.95 MG steel tank provides diurnal flow equalization and short-term emergency storage. Wastewater in the tank is automatically returned to the influent pump station as treatment capacity becomes available.
- From the influent pump station, wastewater is distributed evenly to two Membrane Bioreactor treatment trains for a combined treatment capacity of 1.0 mgd. Each Membrane Bioreactor train includes an anoxic basin, recirculation mixers, an aeration basin, anoxic pumps, aeration and membrane blowers, membrane modules, a membrane tank, mixed liquor recycle pumps, and filtrate pumps.
- Disinfection is accomplished using sodium hypochlorite solution in a chlorine contact tank that provides more than 32 minutes of modal contact time. If disinfection fails, the effluent is rerouted back to the emergency storage basin and retreated.
- Tertiary treated effluent is discharged into Pond S5 for immediate storage, and is then transferred to off-site storage in Ponds S1, S2, S3, S6, S16, and the Crossroads Wastewater Treatment Effluent Storage Ponds A, B, and C.
- Waste activated sludge generated from LCTF is pumped to the solids handling facility located at the adjacent Crossroads Wastewater Treatment Facility. The solids handling facility includes a 0.19 MG aerobic sludge storage tank, two belt filter presses, and a concrete drying bed used for supplemental air drying of dewatered sludge when conditions permit. Air-dried sludge is temporarily stored on the drying bed until transportation to the City of Merced for land application.
- The City's existing recycled water system is governed by its NPDES permit and General Order through the California Regional Quality Control Board. The distribution system consists of three storage ponds; S5, S6 and S-28, and their associated pump stations. The City has approximately 30.3 miles of recycled water pipeline, as of 2018.

The RWQCB approved a San Joaquin River Discharge NPDES in 2020 and expires 31 March 2025. The City has constructed the required modifications to the LCTF to add required de-chlorination facilities and have constructed an outfall pipeline from the LCTF to the San Joaquin River. Developer Funding Agreements for the NPDES facilities return storage ponds and spray fields to the developers who funded the NPDES project, except

for Ponds S5, S6, A, B and C located at the LCTF plus Pond S16 on Stewart Tract which will all be retained as part of the permanent recycled water system.

As described in the General Plan EIR, Impact 3.15-3. The projected flows of the General Plan for the MWQCF and LCTF are not expected to exceed the treatment capacity available for treatment, under the General Plan. Given that projected wastewater generation volumes associated with General Plan buildout is not anticipated to exceed the capacity of the wastewater treatment provider to have adequate capacity, this impact was found to be less than significant.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

Stormwater: As described in the General Plan EIR, development under the General Plan would result in increased areas of impervious surfaces throughout the General Plan Planning Area, resulting in the need for additional or expanded stormwater drainage, conveyance, and retention infrastructure. The stormwater infrastructure necessary to serve the proposed project would involve development of some facilities on-site, extension of infrastructure to connect to existing facilities and connections to facilities within roadway rights-of-way. As part of the development review process the project will be evaluated for conformance with the General Plan, Municipal Code, and other applicable regulations. Project Requirement Hydro 2 requires the project applicant to submit a detailed Stormwater Control Plan constant with General Plan Action PFS-4.5, and the criteria set forth in the Lathrop Stormwater Program.

The General Plan EIR determined that this impact was less than significant. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

Water: The City will supply potable water to the CLSP-2 Amendment Plan Area. The CLSP-2 Amendment Developers will fund the provision of water service. The City will provide potable groundwater from the City's existing well field and potable surface water from Phase 1 and/or the Phase 2 expansion of the South County Surface Water Supply Program (SCSWSP) by the South San Joaquin Irrigation District (SSJID).

The City has prepared a citywide 2020 Urban Water Management Plan (UWMP). The Plan reflects the City's existing and future water demands (including those of the Plan Area) compared to available water supplies to ensure that adequate water is, or will be, available to accommodate the CLSP-2 Amendment. The studies conclude that with the

combined groundwater and SCSWSP surface water sources adequate water supplies would be available to serve the CLSP-2 Amendment Plan Area.

This impact was adequately addressed in the General Plan EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

Wastewater: When the City adopted the CLSP in 2004, a public sewer system did not exist in the CLSP Plan Area. Existing rural residences and other developments disposed of their wastewater through private septic systems and/or leech fields. However, a public sewer system was installed with the CLSP Phase 1 development that was oversized for the CLSP Phase 2 Plan Area. New pipes and a new pump station will be required within the CLSP-2 Amendment Plan Area that will connect to the existing infrastructure within Phase 1. CLSP-2 Amendment Developers will fund or construct the new infrastructure through the payment of development impact fees.

This impact was adequately addressed in the General Plan EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

Stormwater: An existing levee along the San Joaquin River protects the Plan Area from flooding RD-17 operates and maintains the levee. The Federal Emergency Management Agency (FEMA) has categorized the Plan Area as being in Zone X as shown on Flood Insurance Rate Map (FIRM) panel numbers 06077C0605F and 06077C0610F. The Zone X definition relevant to the Plan Area is “areas protected by levees from 1% annual chance flood”.

The RD-17 levee system has been undergoing seepage berm and/or other improvement repair/_upgrade projects to increase the resistance to under-seepage and through-seepage in order maintain compliance with applicable Federal, State, and local standards. A minimum 120 foot “no-build” buffer along the levee as measured from the levee toe is provided within the CLSP-2 Amendment Plan Area to allow adequate space for future improvements if/when needed.

RD-17 has been working with the Department of Water Resources (DWR) and the Central Valley Flood Protection Board (CVFPB) to evaluate options for providing 200-year protection for the Mossdale Tract including the CLSP-2 Amendment Plan Area. The 120’ “no-build” buffer within the CLSP-2 Amendment Plan Area provides sufficient area to accommodate any 100-year improvements and any additional incremental improvements to provide 200-year protection in the future in conjunction with the Mossdale Tract 200-year flood protection improvements to meet the urban level of flood protection criteria.

Using design standards developed in cooperation with the City, the CLSP drainage improvement program will provide for efficient discharge of runoff from a 10-year storm event while also protecting the site from flooding during a 100-year storm event. It is also desirable that a high degree of design flexibility be incorporated into the drainage program. This flexibility will allow sufficient latitude for each new development within the CLSP-2 Amendment Plan Area to design an internal system that meets its site-specific needs, so long as the design is consistent with the overall CLSP-2 Amendment Plan Area Drainage Plan.

The CLSP area is part of a larger watershed known as “the Northern Area” that includes areas both east and west of Interstate 5.

The CLSP-2 Amendment Plan Area is about 20 feet lower than the top of the adjacent San Joaquin River levee. Therefore, runoff must be pumped over/through the levee. To avoid adverse impact to the levees near the CLSP Plan Area, peak discharge is limited to 30% of the 100-year flow rate from the watershed as stated in the 2004 CLSP and CLSP EIR. Therefore, the CLSP-2 Amendment incorporates on-site detention to store excess runoff during periods of peak storm activity.

Two storm drain outfalls to the San Joaquin River exist within the CLSP Plan Area. One outfall is located within the Phase 1 area and the other is located within the Phase 2 area. The outfalls are sized to accommodate the development of the CLSP-2 Amendment Plan Area.

An existing storm drain force main is located within Dos Reis Road and connects existing development east of Interstate-5 to the existing outfall located at the end of Dos Reis Road.

When the City approved the 2004 CLSP, runoff from the CLSP Plan Area was collected in a system of shallow agricultural ditches, roadside ditches, and percolation basins with some small private agricultural pumps that discharged water to the San Joaquin River. However, public storm drain infrastructure is now available that was built with Phase 1 of the CLSP. Existing pipes are located at the northern end of Golden Valley Parkway just south of Dos Reis Road and at the northern end of Stanford Crossing.

Shallow groundwater exists throughout the CLSP-2 Amendment Plan Area and is influenced by both the water level in the river and sub-surface flow from areas of higher elevation to the east, as well as local irrigation practices. Even though the groundwater level may decline with a reduction in farming activities, it is expected that this high ground water condition will generally persist after development, impacting both construction and the future operation of the storm drain system. Infiltration into the

storm pipes through joints and underground structures can result in excessive pumping demands throughout the life of the project. This impact will be reduced by proper installation of pipes having rubber gasket sealed joints.

High groundwater levels can also impact the effectiveness of detention basins. To the extent that groundwater enters the basins, the storage available for the runoff is diminished. There are no detention basins proposed, however if a detention basin is proposed in-lieu of underground storage, the bottom of the basin will be designed to maintain a minimum of two feet of separation from groundwater or other design measures will be implemented such as impervious liners with sub drain systems.

Runoff from the CLSP-2 Amendment Plan Area is designed to discharge to the river through an existing outfall located near the southwest corner of the CLSP-2 Amendment Plan Area at the end of Dos Reis Road and the existing outfall within the Phase 1 area. The existing outfalls are regional facilities. As shown on Figure 6.7 in the CLSP-2, the CLSP-2 Amendment Plan Area will consist of a system having the following three integrated components.

- Gravity lines that collect and deliver surface runoff;
- “Watershed” detention facilities that hold the runoff; and
- A pump station and force main that conveys water to an existing San Joaquin River outfall structure.

The CLSP-2 Amendment Plan Area consists of two major drainage sheds with underground storage pipes to reduce the peak discharge from the Plan Area to the San Joaquin River. Watershed 4 is a part of both the Central Lathrop Specific Plan Phase 1 and this Phase 2 Specific Plan Amendment. The CLSP-2 Amendment proposes to modify the boundary of the existing Watershed 4 to better align with existing property boundaries.

The modification to the watershed 4 boundary will require additional storage which can be accomplished with large diameter storm drain pipes.

In addition to the added storage, a new 39cfs pump will need to be added to the existing Phase 1 storm drain pump station. The pump station is already set up to accept the additional pump so physical pump station modifications are not expected.

The remainder of the CLSP-2 Amendment Plan Area falls within Watershed 3. Large diameter storm drain pipes will be utilized to provide the required underground storage. The underground pipe storage system location will be dispersed throughout the CLSP-2 Amendment Plan Area, with individual developments responsible for a per acre

proportional share of the overall storage requirement. A new pump station and force main will be constructed that will connect to an existing outfall structure. The existing outfall structure will need to be retrofit to meet current design standards. The existing headwall is expected to remain in-place, but the existing pipes connecting to the headwall will need to be removed and replaced near to the top of the levees to increase the elevation of the pipes. New valves will also need to be added to the pipes as required by the current design standards.

The proposed stormwater collection system functions by discharging all runoff directly into the river up to the point where the runoff rate exceeds the capacity of the pump station. When the rate of runoff exceeds the pump station capacity, water “backs up” into the detention pipes until the runoff rate declines and once again equals the capacity of the pump station. The water level in the storage pipes then decreases, emptying completely.

Based on a preliminary design analysis the approximate volume of the underground storage and maximum allowable discharge rates are summarized in Table Utilities-2. Storage is based on the maximum discharge rate shown.

TABLE UTILITIES-2: WATERSHED DETENTION FACILITIES AND PUMP STATION SIZES

Watershed	Maximum Pumping Rate	Total Storage
	CFS	Acre-feet
3	176.7	1.53
4	78.6	17.36
Total	255.3	18.89

A key element of the CLSP-2 Amendment Plan Area storm drain system is its ability to handle the runoff that occurs during a high intensity storm. The drainage system provides multiple layers of protection based on the severity of storm events:

- 10-year Event - The underground system is designed with capacity to accommodate the drainage flows anticipated to occur as a result of a 10-year storm event.
- 10 to 100-year Event - When the capacity of the underground system is exceeded during an intense storm event (in excess of a ten-year event), water flows will be detained in underground storage pipes, designed for the 100-year storm event and distributed throughout the CLSP-2 Amendment Plan Area. This design method keeps the flow depth underground, within acceptable limits (i.e., one foot below floor elevations) and the threat of flooding posed to private property is minimized. An alternative design could be to allow the streets to flood and provide

overland release by means of a descending gradient directing surface flow towards a proposed detention basin. This type of design would require flow in the streets.

- 10 to 100-year Event with Pump Discharge limited – The CLSP-2 Amendment Plan Area storm drain system is also designed to provide flood protection in circumstances requiring a reduction in flow rates of the system pumps that discharge into the San Joaquin River. The Central Valley Flood Protection Board and the City may limit river discharge to pre-development levels whenever the river stage exceeds certain flood elevations. When pump discharge is limited, the CLSP-2 Amendment Plan Area must be able to accommodate the volume of a 100-year, 24-hour storm without flooding buildings. Under these extreme circumstances, the volume of water that must be stored in the Plan Area may exceed the capacity of the detention facilities and will be held in the streets, parking lots and/or other areas.

The CLSP-2 Amendment Plan Area grading concept preserves the elevation of the streets within the watershed at approximately the same elevation as existing conditions. During a rare condition, when the San Joaquin River is high and the stormwater pumps must be reduced, the underground storage allows runoff to be spread throughout the shed avoiding excessive depth of inundation in any one area.

The 2022 Lathrop General Plan amendment changing residential uses to Limited Industrial uses in the CLSP-2 Amendment Plan Area is consistent with the floodplain management strategy included in the San Joaquin Area Flood Control Agency (SJAFC) 200-year Fix-in-Place levee improvement project for the Mossdale Tract as limited industrial uses will occur in the CLSP-2 Amendment Plan Area instead of residential development.

This impact was adequately addressed in the General Plan EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

Response b): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

As described in the General Plan EIR, West Yost developed a WSA for the City of Lathrop General Plan Update. In the WSA, West Yost summarized the land uses in the General Plan Update, projected future demand at Buildout (projected in 2040) and compared the projected water demand to the water supply documented in the City's 2020 Urban Water Management Plan UWMP, and the SSJID 2020 UWMP. A comparison of the available water supply and projected demands at buildout of the General Plan is shown in the General Plan EIR Table 3.15-5.

As indicated in Table 3.15-5, based on the assumptions presented in the WSA, the City would have a 2 percent deficiency in water supplies to serve development of the proposed project land uses during some dry years (i.e during dry year 3 and dry year 4).

While the 2020 UWMP water use projections are the best available currently, water use projections will be re-evaluated in future UWMP updates, based on the new regulations. If the City’s growth projections and/or allocation of land use are updated based on the current General Plan, then the ability to serve new growth may need to be re-evaluated. The General Plan includes a range of policies and actions (listed below) to ensure that the City’s water supply plans are updated to address development and land use changes in order to ensure that future supply levels meet demands. For example, Policy PFS-2.1 requires the City to manage the water system to ensure that the water supply is adequate to meet the needs of existing and future development and is utilized in a sustainable manner. Nevertheless, based the available data, the City is anticipated to have a slight deficit of water supplies during dry years 3 and 4 if the levels of potential new growth analyzed in this EIR occur by 2040.

The proposed warehouse project would add limited industrial uses and would increase the city’s employment base. However, these site uses are generally not water intensive in comparison to agricultural, parks, Institutional, and residential use as shown in Table Utilities 2 below.

TABLE UTILITIES 2. WATER USE FACTORS BY LAND USE TYPE			
Land Use Designation	Water Use Factor		
	2021 Urban Water Management Plan ^(a)		Units
	City Wide	River Islands	
Low Density Residential (LDR)	330	315	gpd/du
Medium Density Residential (MDR)	250	235	gpd/du
High Density Residential (HDR)	135	--	gpd/du
General Commercial	860	--	gpd/ac
Industrial	1200	--	gpd/ac
Parks	2,450	--	gpd/ac
Public/Institutional	1500	--	gpd/ac

(a) Based on unit water demand factors used in the 2020 Urban Water Management Plan (EKI, June 2021). These factors were developed using unit water factors presented in the 2019 Water System Master Plan but updated based on additional water use data for 2017 to 2019.

The General Plan includes a range of policies designed to ensure an adequate water supply for development and to minimize the potential adverse effects of increased water use. Projected water demands associated with General Plan buildout would not exceed the projected available water supplies during normal years, and the General Plan includes a comprehensive set of goals, policies, and actions to ensure an adequate and

reliable source of clean potable water. Nevertheless, as described in the General Plans WSA, it is anticipated that the City, with implementation of the General Plan Update, would have a slight deficiency in water supplies during multiple dry years 3 and 4. Therefore, impacts associated with sufficient water supplies were determined to be significant and unavoidable in the General Plan EIR.

The proposed project is consistent with long range planning identified in the City's General Plan. This impact was adequately addressed in the General Plan EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

The CLSP Phase 2 Plan Area does not include any residential uses and would not directly lead to population growth. No additional development is proposed or would be approved at this time. The proposed CLSP-2 Amendment and municipal code amendments are consistent with the land uses and vision described in the General Plan and would be consistent with impacts previously identified. No new impacts or impacts above and beyond what was previously analyzed would occur.

c): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

The City's wastewater collection system service area is generally contiguous with the city limits. The City currently provides wastewater service to approximately 6,100 residential, commercial, industrial and institutional/governmental properties.

As described in the General Plan EIR, Impact 3.15-3. The projected flows of the General Plan for the MWQCF and LCTF are not expected to exceed the treatment capacity available for treatment, under the General Plan. Given that projected wastewater generation volumes associated with General Plan buildout is not anticipated to exceed the capacity of the wastewater treatment provider to have adequate capacity, this impact was found to be less than significant.

The General Plan includes a range of policies designed to ensure an adequate wastewater treatment capacity for development. For example, Policy PFS-3.5 requires that the City review new development applications in order to ensure that new growth does not exceed the availability of adequate sewage treatment capacity or predate the presence of necessary infrastructure. Additionally, implementing action PFS-3a requires the City to update the IWRMP regarding wastewater collection and treatment every five years, or as needed; the update is also required to be reviewed annually for adequacy and consistency with the General Plan.

As described above, the City must also periodically review and update their applicable master plans, and as growth continues to occur within Lathrop, the City will identify necessary system upgrades and capacity enhancements to meet growth, prior to the approval of new development. Given that projected wastewater generation volumes associated with General Plan buildout is not anticipated to exceed the capacity of the wastewater treatment provider to have adequate capacity, this impact was found to be less than significant, in the General Plan EIR.

The proposed warehouse project is consistent with the uses and policies identified in the General Plan. This impact was adequately addressed in the EIR because the wastewater generated by the proposed project was accounted for the EIR analysis. The proposed project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

The CLSP Phase 2 Plan Area does not include any residential uses and would not directly lead to population growth. No additional development is proposed or would be approved at this time. The proposed CLSP-2 Amendment and municipal code amendments are consistent with the land uses and vision described in the General Plan and would be consistent with impacts previously identified. No new impacts or impacts above and beyond what was previously analyzed would occur.

Responses d), e): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE:

As described in the General Plan EIR, the development of land uses under the General Plan would increase solid waste disposal needs. The Forward Landfill serves the city and has a cease operation date of 2039 and has sufficient capacity to serve the City of Lathrop. Forward Landfill has a remaining landfill capacity of over 22,100,000 tons, and has a current maximum permitted throughput of 8,668 tons per day. It has a total maximum capacity of 59,160,000 cubic yards. The additional solid waste generation associated with buildout of the General Plan, approximately 196.4 tons per day at total buildout, to the Forward Landfill would not exceed the landfill's remaining and additional capacity until landfill closure in 2039. The City will need to secure a new location or expand existing facilities when the Forward Landfill is ultimately closed, if a new permit is not issued at a later date for a cease operation date beyond 2039. There are several options that the City will have to consider for solid waste disposal at that time, including the construction of new facilities or expansion of existing facilities.

As described above, there is adequate landfill capacity to serve the proposed project, and the project would be required to comply with all applicable statutes and regulations related to solid waste. The General Plan EIR determined that this impact was less than

significant. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

The CLSP Phase 2 Plan Area does not include any residential uses and would not directly lead to population growth. No additional development is proposed or would be approved at this time. The proposed CLSP-2 Amendment and municipal code amendments are consistent with the land uses and vision described in the General Plan and would be consistent with impacts previously identified. No new impacts or impacts above and beyond what was previously analyzed would occur.

XX. WILDFIRE

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?			X	
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?			X	
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?			X	
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?			X	

Existing Setting

The proposed project is not located within a State Responsibility Area (SRA), or area identified with wildland fire risks.

Responses to Checklist Questions

Response a-d): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE, CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

The City is not located in or near any State Responsibility Areas and there are no lands classified as very high fire hazard severity zones (VHFHSZ) within or near the Lathrop Planning Area. Therefore, as described in the General Plan EIR the General Plan would have no impact related to wildfire risks associated with lands in or near State Responsibility Areas or lands classified as very high fire hazard severity zones. The proposed project is consistent with the uses and policies identified in the General Plan. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE --

	<i>Significant Impact Peculiar to the Project or the Project Site</i>	<i>Significant Impact due to New Information</i>	<i>Impact Adequately Addressed in the General Plan EIR</i>	<i>Impact not Previously Addressed in General Plan EIR</i>
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?			X	
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?			X	
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?			X	

RESPONSES TO CHECKLIST QUESTIONS

Response a): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE, CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

As described throughout the analysis above, the proposed project would not result in any significant impacts that would substantially reduce the habitat of fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, or reduce the number or restrict the range of a rare or endangered plant or animal to the environment. The project would not result in impacts to known cultural, historical, archaeological or tribal resources.

All potentially significant impacts related to plant and animal species would be reduced to a less-than-significant level through the application of uniformly applied development policies and/or standards. The proposed project is required to implement a range of standard and uniformly applied development policies and standards, most of which are identified in the Lathrop General Plan and General Plan EIR. The cumulative impacts associated with development of the project were considered, analyzed and disclosed in the General Plan EIR. The project would not result in any cumulative impacts that were not contemplated in the General Plan EIR. The project would not result in any peculiar

site-specific impacts, impacts to biological resources or impacts to cultural and/or historical resources. All potentially significant impacts to cultural and/or historical resources would be reduced to a less than significant level through the implementation of minimization policies and actions contained in the Lathrop General Plan and through the application of other uniformly applied standards such as compliance with other local and state requirements, as described previously in this report.

The proposed project would implement requirements aimed at reducing stormwater pollutants and runoff, as well as through compliance of various state, regional and local standards. Specifically related to ensuring the continued sustainability of biological resources through adaptive management, Project Requirement Bio-1 ensures the project proponent seeks coverage under the SJMSCP to mitigate for habitat impacts to covered special status species. Through the application of uniformly applied development policies and/or standards, the project would not result in any cumulative impacts related to biological resources. The General Plan EIR determined that a Substantial Adverse Effects on Fish, Wildlife, and Plant Species was less than significant. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

Response b): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE, CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

The General Plan's environmental review assumed full development and buildout of the Project area, consistent with the uses and density proposed by the project. The cumulative impacts associated with buildout of the CLSP Phase 2 Plan Area, including the project site, were fully addressed in the General Plan EIR, and the cumulative conditions in and around Lathrop have not changed such that the cumulative analysis and conclusions in the General Plan EIR would be altered or invalidated. Additionally, as described throughout the analysis above, the proposed project would not result in any significant individual impacts with the application of uniformly applied development policies and/or standards. However as described in the Lathrop General Plan EIR several impacts were found to be cumulatively significant as described in the Lathrop General Plan Chapter 4.0. The proposed project is consistent with the uses and policies identified in the General Plan. This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

Response c): Adequately addressed in the General Plan EIR.

WAREHOUSE SITE, CLSP PHASE 2 AMENDMENT AND MUNICIPAL CODE UPDATE:

As described throughout the analysis above, the proposed project would not result in any significant impacts that would have environmental effects which will cause substantial adverse effects on humans. The analysis in the relevant sections above provides the application of uniformly applied development policies and/or standards to reduce impacts on humans. Compliance with the Lathrop General Plan, including the applicable policies and requirements identified throughout this document, and through the application of a variety of uniform standards and requirements including those related to air quality, biological resources, cultural resources, hazardous materials, geologic hazards, water pollution and water quality, and noise, ensure any adverse effects on humans are minimized to the extent feasible. However, the General Plan EIR determined that this impact was significant. As described throughout the General Plan's EIR analysis, the General Plan reduces environmental effects including effects that directly and indirectly impact humans through implementation of goals, policies and implementation measures provided in the City's General Plan. However, several environmental impacts would still be considered significant and unavoidable (listed in EIR Section 4.4). These impacts include increases in localized noise, considerable increases of criteria pollutants, reduced air quality, and visual degradation, which may cause substantial adverse effects on humans and the way humans interact with their environment.

This impact was adequately addressed in the EIR. The proposed project would not result in a new or more severe impact than what was previously analyzed.

This report should be cited as: Olberding Environmental, Inc. May 2021. *Biological Resources Analysis Report for the Dos Reis Ranch Property, San Joaquin County, California*. Prepared for Hodgdon Group Reality, Inc. and HMC Construction, Inc.

SUMMARY

On May 5, 2021, Olberding Environmental, Inc. conducted a field reconnaissance survey of the Dos Reis Ranch property (Property) for the purpose of identifying sensitive plant and wildlife species, sensitive habitats, and biological constraints potentially occurring on the Property. The Property surveyed is comprised of approximately 127.28 acres located in Lathrop, San Joaquin County, California.

Results of the initial reconnaissance survey indicate that the Property does not contain any wetlands/waters that might be considered jurisdictional by the U.S. Army Corps of Engineers (Corps), Regional Water Quality Control Board (RWQCB), and/or the California Department of Fish and Wildlife (CDFW). Prior to completing the site survey for this report, site maps, topographic maps, and aerial photographs of the Property were obtained from several sources and reviewed. This information was used in association with the site visit to determine that there was no evidence of any wetland or water features. It is likely that the high sand content of the soil and regular tilling of the Property would facilitate in water draining quickly from the Property.

The U.S. Fish and Wildlife Service (USFWS) Information for Planning and Consultation (IPaC) database, California Natural Diversity Database (CNDDDB), and California Native Plant Society (CNPS) database were queried to create a list of special-status species with the potential to occur on the Property (Attachment 2, Table 2). After the May 5, 2021 site visit it was determined that many of these species had no potential to occur on the Property. A total of nine species were determined to have a low to high potential of occurring on the Property and are discussed in more detail. Due to the largely unvegetated, ruderal/disturbed annual grassland habitat found on the Property, and the history of soil disturbance, it was determined that there is no potential for any special-status plants to be found on the Property.

An elderberry shrub (*Sambucus* sp.) was identified along the western fence line of the Property. Elderberry is the host plant of the Valley elderberry longhorn beetle (VELB) (*Desmocerus californicus dimorphus*). If the plant can be maintained on the Property, then a 20 foot setback buffer will need to be established around it's dripline. If the plant cannot be maintained on the Property, then VELB exit hole surveys will need to be conducted as outlined in the USFWS protocol (USFWS 2017). Whether or not exit holes are identified will determine the required mitigation measures necessary under the SJMSCP (SJCOG 2000).

A total of two special-status reptile species were identified to have a low potential to occur on the Property. The California glossy snake (*Arizona elegans occidentalis*) and the San Joaquin coachwhip (*Masticophis flagellum*) may occur in a foraging capacity. While both species prefer

the dry, open habitat found on the Property for hunting, the regular disturbance of the site diminishes the potential for the species to utilize the Property. Pre-construction surveys should be performed no more than 48 hours prior to ground disturbance or vegetation removal. Surveys would be required to determine presence/absence of these species.

A total of four special-status bird species were identified to potentially occur on the Property in either a nesting or foraging capacity. The burrowing owl (*Athene cunicularia*) has a low potential to occur in a nesting and foraging capacity. The loggerhead shrike (*Lanius ludovicianus*) has a low potential to occur in a foraging capacity only; there is no potential nesting habitat on the Property. Both the Swainson's hawk (*Buteo swainsoni*) and white-tailed kite (*Elanus leucurus*) were observed foraging on the Property during the May 5, 2021 survey. The Swainson's hawk was observed using a nest immediately adjacent to the Property, across Dos Reis Road. Additionally, two red-tailed hawks (*Buteo jamaicensis*) were observed foraging on the property during the May 2021 survey. If project construction-related activities such as tree and vegetation removal or grading take place during the nesting season (February through August), preconstruction surveys for nesting passerine birds and raptors are recommended.

No sign of bat use was observed on the Property during the May 2021 survey; however, based on habitat suitability, it was determined that bats have a moderate potential to utilize the site in a foraging capacity. These bat species include pallid bat (*Antrozous pallidus*) and western mastiff bat (*Eumops perotis californicus*). As there is no potential roosting habitat on the Property, no further action needs to be taken.

1.0 INTRODUCTION

Olberding Environmental, Inc. has conducted a biological resources analysis (biological constraints assessment) of the Dos Reis Ranch Property, located in Lathrop, San Joaquin County, California. This biological resources analysis included a review of pertinent literature on relevant background information and habitat characteristics of the site. Our review included researching existing information in the California Natural Diversity Database (CNDDDB) maintained by the CDFW and the CNPS *Inventory of Rare and Endangered Vascular Plants of California*. Also included was a review of information related to species of plants and animals that could potentially utilize the described habitats identified on and immediately surrounding the Property. To assist in the assessment, a field reconnaissance investigation of the Property was conducted on May 5, 2021. This report documents the methods, results, and conclusions for the reconnaissance-level survey associated with the biological resources analysis for the Property.

2.0 LOCATION

The Property is located along the west side of Interstate 5 within the city limits of Lathrop, San Joaquin County, California. The Property is bordered by South Manthey Road on the east, Lathrop Road on the south, and Dos Reis Road bisects the Property from east to west. Attachment 1, Figure 1 depicts the regional location of the Property in San Joaquin County, and Attachment 1, Figure 2 illustrates the vicinity of the Property in relationship to the City of Lathrop. Attachment 1, Figure 3 identifies the location of the Property on the USGS 7.5 Quadrangle Map for Lathrop. An aerial photograph of the Property has been included as Attachment 1, Figure 4.

Access to the Property is provided from Interstate 5. Take the Lathrop Road exit and turn west onto Lathrop Road. Take an immediate right (north) onto South Manthey Road and take the first left (west) onto Dos Reis Road. Parking is along the shoulder of Dos Reis Road.

3.0 PROPERTY DESCRIPTION

The Property encompasses approximately 127.28 acres split into three parcels, shaped roughly like the number “7”. The north parcel is the largest and is roughly rectangular in shape. The southeast parcel is roughly trapezoidal in shape, while the southwest parcel is a small wedge shape. The Property only supports one habitat type, ruderal/disturbed annual grassland (Attachment 1, Figure 10). The property was historically used for dryland agriculture but has been graded and regularly disked for over a decade. During the May survey, most of the Property was unvegetated due to disking. However, some vegetation was present and included crabgrass (*Digitaria sanguinalis*), ripgut brome (*Bromus diandrus*), black mustard (*Brassica nigra*), wild radish (*Raphanus raphanistrum*), and fiddleneck (*Amsinckia* sp.) with small amounts of other grasses and herbaceous species. A complete list of species observed is included in Attachment 2, Table 1.

The topography of the Property is extremely flat. There are several large, shallow, gradual topographic depressions scattered throughout the property. Additionally, within the north parcel there are 4 raised berm areas that consist of rocky to sandy soil and rising 8 – 10 feet from the surrounding terrain.

4.0 REGULATORY SETTING

4.1 Federal Regulatory Setting

4.1.1 Plants and Wildlife

The federal Endangered Species Act (ESA) of 1973 (16 USC 1531 et seq., as amended) prohibits federal agencies from authorizing, permitting, or funding any action that would result in biological jeopardy to a plant or animal species listed as Threatened or Endangered under the Act. Listed species are taxa for which proposed and final rules have been published in the Federal Register (USFWS 2021a). If a proposed project may jeopardize listed species, Section 7 of the ESA requires consideration of those species through formal consultations with the USFWS. Federal Proposed species (USFWS 2021b) are species for which a proposed listing as Threatened or Endangered under ESA has been published in the Federal Register. If a proposed project may jeopardize proposed species, Section 7 of the ESA affords consideration of those species through informal conferences with USFWS. The USFWS defines federal Candidate species as “those taxa for which we have on file sufficient information on biological vulnerability and threats to support issuance of a proposed rule to list, but issuance of the proposed rule is precluded by other higher priority listing actions” (USFWS 2021b). Federal Candidate species are not afforded formal protection, although USFWS encourages other federal agencies to give consideration to Candidate species in environmental planning.

4.1.2 Wetlands/Waters

The federal government, acting through the Corps and the Environmental Protection Agency (EPA), has jurisdiction over all “waters of the United States” as authorized by §404 of the Clean Water Act (CWA) and §10 of the Rivers and Harbors Act of 1899 (33 CFR Parts 320-330). Properties that cause the discharge of dredged or fill material into waters of the United States require permitting by the Corps. Actions affecting small areas of jurisdictional waters of the United States may qualify for a Nationwide Permit (NWP), provided conditions of the permit are met, such as avoiding impacts to threatened or endangered species or to important cultural sites. Properties that affect larger areas or which do not meet the conditions of an NWP require an Individual Permit. The process for obtaining an Individual Permit requires a detailed alternatives analysis and development of a comprehensive mitigation/monitoring plan.

Waters of the United States are defined as territorial seas and traditionally navigable waters, tributaries, lakes and ponds, and impoundments of jurisdictional waters, and adjacent wetlands. Under federal regulation, wetlands are defined as areas that are inundated or saturated by surface

of groundwater at a frequency or duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. (33 CFR Part 328.3(c)(16)). Wetlands generally include swamps, marshes, bogs, and similar areas. In addition, portions of the riparian habitat along a river or stream may be a wetland where the riparian vegetation is at or below the ordinary high water mark and thus also meets the wetland hydrology and hydric soil criteria.

Navigable waters include all waters subject to the ebb and flow of the tides, including the open ocean, tidal bays, and tidal sloughs. Navigable waters also include some large, non-tidal rivers and lakes, which are important for transportation in commerce. The jurisdictional limit over navigable waters extends laterally to the entire water surface and bed of the waterbody landward to the limits of the mean high tide line. For non-tidal rivers or lakes, which have been designated (by the Corps) to be navigable waters, the limit of jurisdiction along the shoreline is defined by the ordinary high water mark. “Other waters” refer to waters of the United States other than wetlands or navigable waters. Other waters include streams and ponds, which are generally open water bodies and are not vegetated. Other waters can be perennial or intermittent water bodies and waterways. The Corps regulates other waters to the outward limit of the ordinary high water mark. Streams should exhibit a defined channel, bed and banks to be delineated as other waters.

The Corps does not generally consider “non-tidal drainage and irrigation ditches excavated on dry land” to be jurisdictional waters of the United States (and such ditches would therefore not be regulated by the Corps (33 CFR Parts 320-330, November 13, 1986). Other areas generally not considered jurisdictional waters include: 1) artificially irrigated areas that would revert to upland habitat if the irrigation ceased; 2) artificial lakes and ponds created by excavating and/or diking of dry land to collect and retain water, used exclusively for such purposes as stock watering, irrigation, settling basins, or rice growing; 3) waste treatment ponds; 4) ponds formed by construction activities including borrow pits until abandoned; and 5) ponds created for aesthetic reasons such as reflecting or ornamental ponds (33 CFR Part 328.3). However, the preamble also states “the Corps reserves the right on a case-by-case basis to determine that a particular waterbody within these categories” can be regulated as jurisdictional water. The EPA also has authority to determine jurisdictional waters of the U.S. on a case-by-case basis. Riparian habitat that is above the ordinary high water mark and does not meet the three-parameter criteria for a wetland would not be regulated as jurisdictional waters of the United States.

4.1.3 Migratory Bird Treaty Act

Raptors are migratory bird species protected by international treaty under the Migratory Bird Treaty Act (MBTA) of 1918 (16 U.S.C. 703-711). The MBTA makes it unlawful to take, possess, buy, sell, purchase, or barter any migratory bird listed in 50 CFR. Part 10, including

feathers or other parts, nests, eggs, or products, except as allowed by implementing regulations (50 CFR 21). Sections 3503, 3503.5, and 3800 of the California Fish and Game Code prohibit the take, possession, or destruction of birds, their nests or eggs. Implementation of the take provisions requires that Property-related disturbance at active nesting territories be reduced or eliminated during critical phases of the nesting cycle (generally February 1 – September 1, annually). Disturbance that causes nest abandonment and/or loss of reproductive effort (e.g., killing or abandonment of eggs or young) or the loss of habitat upon which the birds depend, is considered “taking” and is potentially punishable by fines and/or imprisonment. Such taking would also violate federal law protecting migratory birds (e.g., MBTA).

4.1.4 Federal Bald and Golden Eagle Protection Act

In addition to protection under the MBTA, both the bald eagle and the golden eagle are also protected by the Bald and Golden Eagle Protection Act of 1940 (16 U.S.C. 668-668c). The Bald and Golden Eagle Protection Act, and amended several times since being enacted in 1940, prohibits anyone, without a permit issued by the Secretary of the Interior, from “taking” bald or golden eagles, including their parts, nests, or eggs (USFWS 2007). The Act provides criminal penalties for persons who “take, possess, sell, purchase, barter, offer to sell, purchase or barter, transport, export or import, at any time or any manner, any bald eagle ... [or any golden eagle], alive or dead, or any part, nest, or egg thereof.” The Act defines “take” as “pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, molest or disturb” (USFWS 2007).

For purposes of these guidelines, “disturb” means: “to agitate or bother a bald or golden eagle to a degree that causes, or is likely to cause, based on the best scientific information available, 1) injury to an eagle, 2) a decrease in its productivity, by substantially interfering with normal breeding, feeding, or sheltering behavior, or 3) nest abandonment, by substantially interfering with normal breeding, feeding, or sheltering behavior” (USFWS 2007).

In addition to immediate impacts, this definition also covers impacts that result from human-induced alterations initiated around a previously used nest site during a time when eagles are not present, if, upon the eagle’s return, such alterations agitate or bother an eagle to a degree that interferes with or interrupts normal breeding, feeding, or sheltering habits, and causes injury, death or nest abandonment (USFWS 2007).

4.2 State Regulatory Setting

4.2.1 Plants and Wildlife

Property permitting and approval requires compliance with California Environmental Quality Act (CEQA), the 1984 California Endangered Species Act (CESA), and the 1977 Native Plant Protection Act (NPPA). The CESA and NPPA authorize the California Fish and Game Commission to designate Endangered, Threatened and Rare species and to regulate the taking of these species (§§2050-2098, Fish & Game Code). The California Code of Regulations (Title 14, §670.5) lists animal species considered Endangered or Threatened by the State.

The Natural Heritage Division of the CDFW administers the state rare species program. The CDFW maintains lists of designated Endangered, Threatened, and Rare plant and animal species (CDFW 2021b and 2021c). Listed species either were designated under the NPPA or designated by the Fish and Game Commission. In addition to recognizing three levels of endangerment, the CDFW can afford interim protection to candidate species while they are being reviewed by the Fish and Game Commission.

The CDFW also maintains a list of animal species of special concern (CDFW 2021c), most of which are species whose breeding populations in California may face extirpation. Although these species have no legal status, the CDFW recommends considering them during analysis of proposed property impacts to protect declining populations and avoid the need to list them as endangered in the future.

Under provisions of §15380(d) of the CEQA Guidelines, the CEQA lead agency and CDFW, in making a determination of significance, must treat non-listed plant and animal species as equivalent to listed species if such species satisfy the minimum biological criteria for listing. In general, the CDFW considers plant species on List 1A (Plants Presumed Extinct in California), List 1B (Plants Rare, Threatened, or Endangered in California and elsewhere), or List 2 (Plants Rare, Threatened, or Endangered in California, But More Common Elsewhere) of the CNPS *Inventory of Rare and Endangered Vascular Plants of California* (Skinner and Pavlik 1994) as qualifying for legal protection under §15380(d). Species on CNPS Lists 3 or 4 may, but generally do not, qualify for protection under this provision.

Sensitive habitats include riparian corridors, wetlands, habitats for legally protected species and CDFW Species of Special Concern, areas of high biological diversity, areas providing important wildlife habitat, and unusual or regionally restricted habitat types. Habitat types considered sensitive include those listed on the CNDDDB working list of “high priority” habitats (i.e., those habitats that are rare or endangered within the borders of California) (Holland 1986).

4.2.2 Wetlands/Waters

The RWQCB regulates activities in wetlands and other waters through §401 of the Clean Water Act. Section 401 requires a state water quality certification for properties subject to 404 regulations. Requirements of the certification include mitigation for loss of wetland habitat. In the San Francisco Bay region, the RWQCB may identify additional wetland mitigation beyond the mitigation required by the Corps. California Fish and Game Code §§1600-1607 require the CDFW be notified of any activity that could affect the bank or bed of any stream that has value to fish and wildlife. Upon notification, the CDFW has the discretion to execute a Streambed Alteration Agreement. The CDFW defines a stream as follows:

“... a body of water that flows at least periodically...through a bed or channel having banks and supporting fish and other aquatic life. This includes watercourses having a subsurface flow that supports or has supported riparian vegetation.”

(Source: Streambed Alteration Program, California Department of Fish and Wildlife, 2016).

In practice, CDFW authority is extended to any “blue line” stream shown on a USGS topographic map, as well as unmapped channels with a definable bank and bed. Wetlands, as defined by the Corps, need not be present for CDFW to exert authority.

4.2.3 California Environmental Quality Act

According to Appendix G of the CEQA (CEQA 2021) Guidelines, a proposed project would have a significant impact on biological resources if it would:

- a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW and USFWS?
- b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the CDFW or USFWS?
- c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?
- d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

- e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?
- f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

4.3 Local Regulatory Setting

4.3.1 San Joaquin County Multi-Species Habitat Conservation and Open Space Plan

In November of 2000, San Joaquin County implemented the San Joaquin County Multi-Species Habitat Conservation and Open Space Plan (SJMSCP) (SJCOG 2000). The plan was developed to provide a strategy for balancing the protection of Open Space and wildlife with the protection of local landowners and agricultural practices. The SJMSCP, in accordance with ESA Section 10(a)(1)(B) and CESA Section 2081(b) Incidental Take Permits, provides compensation for the Conversion of Open Space to non-Open Space uses which affect the plant, fish and wildlife species covered by the SJMSCP. Species that are covered by the SJMSCP that have the potential to occur within the Property include VELB, Swainson's hawk, burrowing owl, and the western mastiff bat. The survey and minimization procedures for these species are discussed in Section 8.0 of this report.

5.0 METHODS OF ANALYSIS FOR GENERAL BIOLOGICAL RESOURCES

A special-status plant and wildlife species database search and review was conducted using the CNDDDB and other sources. An additional search was conducted for special-status plants using CNPS *Inventory* on-line. Special-status species reports were accessed by searching the CNDDDB database for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon USGS 7.5-minute quadrangles which surround the Property, and by examining those species that have been identified in the vicinity of the Property. These quadrangles will be henceforth noted as surrounding quads. The database report identified special-status species known to occur in the region or those that have the potential to occur in the vicinity of the Property. The CNDDDB report was used to focus special-status species analysis of the site prior to the reconnaissance surveys.

An Olberding Environmental biologist conducted a reconnaissance-level survey of the Property on May 5, 2021. The survey consisted of walking throughout the Property and evaluating the site and adjacent lands for potential biological resources. Existing conditions, observed plants and wildlife, adjacent land use, soils and potential biological resource constraints were recorded

during the visit. Plant and wildlife species observed within and adjacent to the Property during the reconnaissance survey are listed in Attachment 2, Table 1. Site photographs are provided in Attachment 3 of this document. Attachment 1, Figure 9 shows where each site photo was taken.

The objectives of the field survey were to determine the potential presence or absence of special-status species habitat listed in the CNDDDB database report and to identify any wetland areas that could be potentially regulated by the Corps, RWQCB, and/or CDFW (CDFW 2021a). In addition, the Olberding Environmental biologist looked for other potential sensitive species or habitats that may not have been obvious from background database reports or research. Surveys conducted after the growing season or conducted outside of the specific flowering period for a special-status plant cannot conclusively determine the presence or absence of such plant species; therefore, site conditions and habitat type were used to determine potential for occurrence. When suitable habitat was observed to support a special-status plant or animal species, it was noted in the discussion for that particular species. Regulatory agencies evaluate the possibility of occurrence based on habitats observed on-site and the degree of connectivity with other special-status animal habitats in the vicinity of the Property. These factors are discussed in each special-status plant or animal section. Potential for occurrence of each special-status or protected plant and animal species was evaluated using the following criteria.

- **Present:** The species has been recorded by CNDDDB or other literature as occurring on the Property and/or was observed on the Property during the reconnaissance survey or protocol surveys.
- **May Occur:** The species has been recorded by CNDDDB or other literature as occurring within five miles of the Property, and/or was observed within five miles of the Property, and/or suitable habitat for the species is present on the Property or its immediate vicinity.
- **Not Likely to Occur:** The species has historically occurred on or within five miles of the Property, but has no current records. The species occurs within five miles of the Property but only marginally suitable habitat conditions are present. The Property is likely to be used only as incidental foraging habitat or as an occasional migratory corridor.
- **Presumed Absent:** The species will not occur on the Property due to the absence of suitable habitat conditions, and/or the lack of current occurrences. Alternatively, if directed or protocol-level surveys were done during the proper occurrence period and the species was not found, it is presumed absent.

Sources consulted for agency status information include USFWS (2021a) for federally listed species and CDFW (2021c) for State of California listed species. Based on information from the

above sources, Olberding Environmental developed a target list of special-status plants and animals with the potential to occur within or in the vicinity of the Property (Attachment 2, Table 2).

5.1 Soils Evaluation

The soils present on a property may determine if habitat on the site is suitable for certain special-status plants and animals. The host plants of some special-status invertebrates may also require specific soil conditions. In the absence of suitable soil conditions, special-status plants or animals requiring those conditions would be presumed absent. Information regarding soil characteristics for the Property was obtained by viewing the Natural Resources Conservation Service (NRCS) Web Soil Survey report for the Property (NRCS 2021).

5.2 Plant Survey Methods

The purposes of the botanical surveys were (1) to characterize the habitat types (plant communities) of the study area; (2) to determine whether any suitable habitat for any special-status plant species occurs within the study area; and (3) to determine whether any sensitive habitat types (wetlands) occur within the study area. Site conditions and plant habitat surveys are important tools in determining the potential occurrence of plants not recorded during surveys (e.g., special-status plants) because presence cannot conclusively be determined if field surveys are conducted after the growing season or conducted outside a specific flowering period.

5.2.1 Review of Literature and Data Sources

The biologist conducted focused surveys of literature and special-status species databases in order to identify special-status plant species and sensitive habitat types with potential to occur in the study area. Sources reviewed included the CNDDDB occurrence records (CDFW 2021a) and CNPS *Inventory* (CNPS 2021) for the surrounding quads; and standard flora (The Jepson Manual 2012). From the above sources, a list of special-status plant species with potential to occur in the Property vicinity was developed (Attachment 2, Table 2).

5.2.2 Field Surveys

A biologist from Olberding Environmental conducted a reconnaissance-level survey to determine habitat types and the potential for special-status plants based on the observed habitat types. All vascular plant species that were identifiable at the time of the survey were recorded and identified using keys and descriptions in The Jepson Manual (2012).

The habitat types occurring on the Property were characterized according to pre-established categories. In classifying the habitat types on the site, the generalized plant community classification schemes of *A Manual of California Vegetation* (Sawyer, Keeler-Wolf, and Evens 2009) were consulted. The final classification and characterization of the habitat types of the study area were based on field observations.

5.3 Wildlife Survey Methods

The purposes of the wildlife survey were to identify special-status wildlife species and/or potential special-status wildlife habitats within the study area.

5.3.1 Review of Literature and Data Sources

A focused review of literature and data sources was conducted in order to determine which special-status wildlife species had potential to occur in the vicinity of the Property. Current agency status information was obtained from USFWS (2021a) for species listed as Threatened or Endangered, as well as Proposed and Candidate species for listing, under the federal ESA; and from CDFW (2021b, 2021c) for species listed as Threatened or Endangered by the state of California under the CESA, or listed as “species of special concern” by CDFW. From the above sources, a list of special-status wildlife species with potential to occur in the Property vicinity was developed (Attachment 2, Table 2).

5.3.2 Field Surveys

General Wildlife Survey – An Olberding Environmental biologist conducted a survey of species habitat within the entire study area, including visible portions of the adjacent properties. The purpose of the habitat survey was to evaluate wildlife habitats and the potential for any protected species to occur on or adjacent to the Property.

Reconnaissance-Level Raptor Survey – A reconnaissance-level raptor survey was conducted on the Property. Observation points were established on the periphery of the site to view raptor activity over a fifteen- to thirty-minute time period. This survey was conducted with the use of binoculars and notes were taken for each species occurrence. Additionally, utility poles and perch sites in the vicinity of the Property were observed. All raptor activity within and adjacent to the Property was recorded during the reconnaissance-level observation period.

Reconnaissance-Level Burrowing Owl (*Athene cunicularia*) Survey – A reconnaissance-level burrowing owl survey was also conducted on the Property to identify potential burrow sites or burrowing owl use of on-site habitat. The general presence and density of suitable burrow sites (e.g., rodent burrows) was evaluated for the Property.

6.0 RESULTS FOR GENERAL BIOLOGICAL RESOURCES

The search and review of the CNDDDB database reports revealed the occurrence of special-status plant and wildlife species that occur in the habitats found within the Property boundaries (CDFW 2021a). The CNDDDB database and background data were reviewed for the surrounding quads. Animal occurrences shown on Attachment 1, Figure 5 and plant occurrences shown on Attachment 1, Figure 6 are located within 5 miles of the Property and were reviewed for their potential to occur on the Property based on general habitat types. Results of the species review is tabulated on Attachment 2, Table 2. Critical habitat within the surrounding quads is shown on Attachment 1, Figure 7.

6.1 Soil Evaluation Results

The NRCS (2021) reports four soil types within the Property. A map of this soil type can be found in Attachment 1, Figure 8. The soil type mapped included the following:

- **Bigani loamy coarse sand, partially drained, 0 to 2 percent slopes** – The Bigani series consists of poorly drained soils on low alluvial fans, formed from alluvium derived from granitic sources. These soils are artificially drained and very deep and typically found between 20 and 35 feet in elevation. The composition of this soil type within the Property consists of 85 percent Bigani and similar soils and 15 percent of minor components including Grangeville (5%), Manteca (4%), Veritas (4%), and Artens, stratified (2%).

The permeability of the soil is high while the runoff is very slow. The soil is subject to rare flooding, and is typically used for irrigated crops. Its stratified layers consist of the following (colors are for dry soil unless otherwise stated):

Ap – 0 to 11 inches; loamy, coarse sand, very dark gray when moist; weak, fine, granular structure; loose, non-sticky, and non-plastic; few fine and common very fine and medium roots; many very fine interstitial and few very fine tubular pores; moderately alkaline; clear wavy boundary.

C1 – 11 to 20 inches; light gray, loamy coarse sand, dark gray when moist; common fine distinct olive brown mottles when moist; massive; loose, non-sticky and non-

plastic; few very fine roots; many very fine interstitial pores; moderately alkaline; clear smooth boundary.

C2 – 20 to 40 inches; light brownish gray loamy coarse sand, dark gray when moist; common fine distinct dark gray/brown mottles when moist; massive; loose, non-sticky and non-plastic; many very fine interstitial pores; moderately alkaline; gradual wavy boundary.

C3 – 40 to 60 inches; light brownish gray loamy coarse sand, olive gray when moist; common fine distinct yellowish brown mottles, olive brown when moist; massive; loose, non-sticky and non-plastic; many very fine interstitial pores; slightly effervescent; disseminated lime; moderately alkaline.

- **Dello clay loam, drained, 0 to 2 percent slopes, overwashed** – The Dello series consists of poorly drained soils on flood plains and old slough remnants. These soils are artificially drained and very deep. They formed in alluvium derived from granitic rock sources. The composition of this soil type within the Property consists of 85 percent Dello and similar soils and 15 percent of minor components including Columbia (4%), Egbert (4%), Merrit (4%), and Unnamed stratified substrate (3%).

The permeability of the soil is rapid in the upper part of the soil profile, but slow in the clayey substratum. Runoff is slow and the hazard of erosion is slight. Its stratified layers consist of the following (colors are for dry soil unless otherwise stated):

Ap – 0 to 7 inches; light yellowish brown loamy sand, dark yellowish brown when moist; single grained; loose, non-sticky and non-plastic; common very fine and fine roots; neutral; clear wavy boundary.

C – 7 to 32 inches; pale brown sand, grayish brown when moist; many fine and medium distinct yellowish red mottles, reddish brown when moist; single grained; loose, non-sticky and non-plastic; few very fine roots; moderately alkaline; clear wavy boundary.

Cg – 32 to 60 inches; light gray sand, variegated light brownish gray and grayish brown when moist; many fine distinct strong brown mottles, dark brown when moist; single grained; loose, non-sticky and non-plastic; moderately alkaline.

- **Timor loamy sand, 0 to 2 percent slopes** – The Timor series consists of moderately well drained soils on low fan terraces or alluvial fans. These soils are deep to hardpan and formed in alluvium derived from granitic rock sources. The composition of this soil type within the Property consists of 85 percent Timor and similar soils and 15

percent of minor components including Bisgani (3%), Grangeville (4%), Veritas (4%), and Artens, stratified (2%).

Permeability is rapid and the soil is moderately well drained. Runoff is slow and the hazard of erosion is slight. The soil is subject to rare flooding. Its stratified layers consist of the following (colors are for dry soil unless otherwise stated):

Ap – 0 to 14 inches; grayish brown loamy sand, very dark grayish brown when moist; weak medium subangular blocky structure; soft, very friable, non-sticky and non-plastic; few fine and common very fine roots; many very fine interstitial pores; neutral; clear smooth boundary.

A – 14 to 31 inches; grayish brown loamy sand, very dark grayish brown when moist; weak medium subangular blocky structure; soft, very friable, non-sticky and non-plastic; few fine and common very fine roots; many very fine interstitial pores; neutral; clear wavy boundary.

Bk – 31 to 56 inches; brown loamy sand, dark brown when moist; common medium distinct light brown mottles, dark brown when moist; massive; soft, very friable, non-sticky and non-plastic; few very fine roots; many very fine interstitial pores; strongly effervescent; few fine soft masses and seams of lime; moderately alkaline; abrupt wavy boundary.

2Bkqm – 56 to 60 inches; light gray, strongly cemented duripan, grayish brown when moist; common medium distinct reddish yellow mottles, dark brown when moist; massive; brittle; continuous indurated laminar cap 1 to 2 millimeters thick; strongly cemented in 75 percent of the matrix; strongly effervescent; common fine soft masses of lime; moderately alkaline.

- **Tinnin loamy coarse sand, 0 to 2 percent slopes** – The tinnin series consists of well drained soils on low fan terraces and alluvial fans. These soils are very deep and formed in alluvium derived from granitic rock sources.

Permeability is rapid and well drained. These soils are very deep and formed on nearly level alluvial fans. Runoff is slow and the hazard of water erosion is slight. Its stratified layers consist of the following (colors are for dry soil unless otherwise stated):

Ap – 0 to 14 inches; grayish brown loamy coarse sand, very dark grayish brown when moist; weak fine subangular blocky structure; soft, very friable, non-sticky and non-

plastic; few fine and common very fine roots; many very fine interstitial pores; 2 percent rounded pebbles; mildly alkaline; diffuse smooth boundary.

A – 14 to 28 inches; grayish brown loamy coarse sand, very dark grayish brown when moist; weak fine subangular blocky structure; soft, very friable, non-sticky and non-plastic; few fine and common very fine roots; many very fine interstitial pores; 2 percent rounded pebbles; neutral; diffuse wavy boundary.

C1 – 28 to 53 inches; brown loamy coarse sand, dark brown when moist; common medium distinct light brown mottles, dark brown when moist; massive; soft, very friable, non-sticky and non-plastic; many very fine interstitial pores; 2 percent rounded pebbles; slightly acid; diffuse wavy boundary.

C2 – 53 to 75 inches; pale brown loamy coarse sand, brown when moist; common medium distinct light brown mottles, dark brown when moist; massive; slightly hard, friable, non-sticky and non-plastic; many very fine interstitial pores; 2 percent rounded pebbles; neutral.

6.2 Plant Survey Results

6.2.1 Floristic Inventory and Habitat Characterization

The Property only supports one habitat type, ruderal/disturbed annual grassland. In classifying the habitat on the Property, generalized plant community classification schemes were used (Sawyer, Keeler-Wolf, and Evens 2009). The final classification and characterization of the habitat type of the Property was based on field observations. Special-status plant species that occurred within 5 miles of the Property are shown in Attachment 1, Figure 6.

The habitat type and a description of the plant species present within the habitat type are provided below. The habitats found on the Property are mapped on Attachment 1, Figure 10. Dominant plant species are also noted. A complete list of plant species observed on the Property can be found within Attachment 2, Table 1.

Ruderal/Disturbed Annual Grassland

The Property entirely consists of ruderal/disturbed annual grassland. The Property was historically used for dryland agriculture, however it has remained fallow and regularly disked for over a decade. Because of this, the Property was largely unvegetated (75% or more bare ground) during the May 2021 site visit. The dominant vegetation that was observed included crabgrass, ripgut brome, black mustard, wild radish, and fiddleneck with small amounts of other grasses

and herbaceous species. A complete list of the plant species identified are included in Attachment 2, Table 1.

Special-Status Plant Species

Special-status plant species include species listed as Rare, Threatened, or Endangered by the USFWS (2021a) or by the State of California (CDFW 2021b). Federal Proposed and Candidate species (USFWS, 2021b) are also special-status species. Special-status species also include species listed on List 1A, List 1B, or List 2 of the CNPS Inventory (Skinner and Pavlik, 1994; CNPS 2021). All species in the above categories fall under state regulatory authority under the provisions of CEQA, and may also fall under federal regulatory authority. Considered special-status species are species included on List 3 (Plants About Which We Need More Information—A Review List) or List 4 (Plants of Limited Distribution—A Watch List) of the CNPS *Inventory*. These species are considered to be of lower sensitivity and generally do not fall under specific state or federal regulatory authority. Specific mitigation considerations are not generally required for List 3 and List 4 species.

Attachment 2, Table 2 includes a list of special-status plants with the potential to occur within or in the immediate vicinity of the Property based on a review of the surrounding quads. The special-status plant species identified by the CNDDDB as potentially occurring on the Property are known to grow only from specific habitat types. The specific habitats or “micro-climate” necessary for many of the plant species to occur are not found within the boundaries of the Property. Additionally, the Property has been disked annually for more than a decade, inhibiting the establishment of a developed plant stratum. Because of this, the annual grassland habitat that occurs on the Property is unlikely to support any special-status plant species.

Four occurrences of special-status plants were identified within a five-mile radius of the point roughly representing the center of the Property (Attachment 1, Figure 6). However, it was determined that due to the regular disturbance of habitat present on the site, it is unlikely that any special-status plants will occur on the Property.

6.3 Wildlife Survey Results

6.3.1 General Wildlife Species and Habitats

A complete list of wildlife species observed within the Property can be found in Attachment 2, Table 1. Wildlife species commonly occurring within habitat types present on the Property are discussed below:

Ruderal/Disturbed Annual Grassland

Due to the heavily disturbed nature of the Property there were a limited number of wildlife species observed during the survey. A coyote (*Canis latrans*) was observed crossing the site and other signs of coyotes (paw prints, scat, and possible dens) were observed throughout the northern parcel of the Property. There are several raised berms scattered throughout the northern parcel that contained vast networks of California ground squirrel (*Otospermophilus beecheyi*) burrows and several squirrels were observed during the survey. It is likely that other “urban” mammals such as racoon (*Procyon lotor*), striped skunk (*Mephitis mephitis*), or other burrowing rodents would utilize the habitat on the Property. Additionally, bat species such as the pallid bat (*Antrozous pallidus*) and western mastiff bat may use habitat on the property for foraging.

Several raptors were observed foraging over the northern parcel including a pair of red-tailed hawks (*Buteo jamaicensis*), a white-tailed kite (*Elanus leucurus*), and a Swainson’s hawk that was nesting immediately adjacent to the Property. Other common avian species that may utilize habitat on the property include American crow (*Corvus brachyrhynchos*) and turkey vulture (*Cathartes aura*). Due to the presence of mammal burrows and friable soil, there is also the potential for burrowing owl to occur on the Property.

Numerous western fence lizards (*Sceloporus occidentalis*) were observed throughout the property, and other reptile species such as the California glossy snake (*Arizona elegans occidentalis*) and San Joaquin coachwhip (*Masticophis flagellum*) may occur on the Property. An elderberry shrub (*Sambucus* spp.) was also identified on the property. As elderberry is the host plant for VELB, there is the potential for this species to occur on the Property.

INVERTEBRATES

Valley Elderberry Longhorn Beetle (VELB) (*Desmocerus californicus dimorphus*), Federally Threatened.

People often call this species “VELB” to avoid saying the whole name. Longhorn beetles (family Cerambyidae) are characterized by long tube-like bodies with long antennae, often more than $\frac{2}{3}$ of the body length. VELB are stout-bodied. Males range in length from about 2 cm (about $\frac{1}{2}$ to nearly 1 inch), measured from the front of the head to the end of the abdomen, with antennae about as long as their bodies. Females are slightly broader than males and have shorter antennae. Adult males have red-orange elytra (wing covers) with four elongate spots. The red-orange fades to yellow on some museum specimens. Adult females have dark colored elytra.

Adults eat elderberry leaves and flowers. Larvae eat the inside of elderberry stems. The species is nearly always found on or close to its host plant, red or blue elderberry (*Sambucus* species),

along rivers and streams. Females lay their eggs on the bark. Larvae hatch and burrow into the stems. Stems need to be at least about one inch in diameter.

There is one CNDDDB occurrence within five miles of the Property. Occurrence #158 is located approximately 4.4 miles northeast of the Property along the Middle River. One adult beetle was collected along the levee road in 1984 and other shrubs had exit holes.

There is one elderberry shrub on the Property, along the northeast fence line. The shrub is approximately 6 feet tall by 15 feet wide. The shrub is not in a riparian area and there are no other elderberry shrubs anywhere in the vicinity. Given the above information, there is a moderate potential for VELB to occur on the Property due to the presence of its host plant.

REPTILES

California Glossy Snake (*Arizona elegans occidentalis*). State Species of Special Concern.

This medium sized (3-4 feet) muscular snake has smooth, glossy scales with a faded or bleached out appearance and a short tail. This subspecies is generally darker in color than other glossy snake subspecies with a tan or light brown ground color, dark brown blotches with dark edges on the back and sides, with a pale unmarked belly. This subspecies occurs from the eastern part of the San Francisco Bay Area southwards to Baja California, Mexico. However, this species is absent from the central coast. The two other subspecies of glossy snakes found in California, the desert glossy snake (*Arizona elegans eburnata*) and Mojave glossy snake (*Arizona elegans candida*) occur in arid regions in the southeast of the state.

The California glossy snake is nocturnal and hides underground in the daytime under rocks, existing burrows, or they can dig their own burrows. They are typically active from late February until November with peak activity in May and being less active in the summer. This species actively hunts lizards, small snakes, terrestrial birds, and nocturnally-active mammals by direct swallowing or constriction. The California glossy snake inhabits arid scrub, rocky washes, grasslands, and chaparral. They typically prefer microhabitat areas that consist of open areas with soil loose enough for easy burrowing.

There are no CNDDDB occurrences of California glossy snake within five miles of the Property. The nearest CNDDDB occurrence (#17) is located approximately 15 miles southwest of the Property, southwest of Tracy. A juvenile snake was collected at this location in 1986. Given the above information, there is a low potential for California glossy snake to occur on the Property.

San Joaquin Coachwhip (*Masticophis flagellum*). State Species of Special Concern.

This slender, long snake can grow to 5.5 feet in length, making it the second longest snake in California. The San Joaquin coachwhip is fast moving with smooth scales, a large head, a thin neck, and a long tail. Their color is tan, olive brown, or yellowish brown with a braided pattern along their tail, which gives the species its name. This species lacks the very dark head and neckbands of other subspecies found in California.

The San Joaquin coachwhip is active during the daytime and is able to tolerate high temperatures. Because of their affinity to higher temperatures, they typically emerge from winter sites in April or May, later than many other snakes. This species is a good climber, and their diet typically includes bats, birds, bird eggs, lizards, snakes, amphibians, and carrion. This species is endemic to California and occurs from the northern Central Valley southward to the Grapevine in Kern County. There the species integrates with the subspecies red racer (*Masticophis flagellum piceus*). The San Joaquin coachwhip occurs in open, dry, treeless areas with little or no cover including valley grasslands habitat. They avoid dense vegetation where they can not move quickly and take refuge in rodent burrows, under shaded vegetation, and under surface objects.

There are no CNDDDB occurrences of San Joaquin coachwhip within five miles of the Property. The nearest occurrence (#2) is located approximately 15 miles southwest of the Property, southwest of Tracy. Multiple specimens have been collected at this location, with the most recent in 1991. The hot, dry, barren nature of the ruderal/disturbed annual grassland habitat on the Property could provide hunting habitat, while the abundance of rodent burrows could provide refuge habitat. While the property does fall within the range of the species, all CNDDDB occurrences are found higher in elevation among the foothills, or much further south in the San Joaquin valley. Given the above information, there is a low potential for San Joaquin coachwhip to occur on the Property.

BIRDS

Red-Tailed Hawk (*Buteo jamaicensis*). State Protected.

The red-tailed hawk is a large *Buteo* that is distinct due to the red color of its tail feathers in contrast to the brown color of its body. Not all red-tailed hawks exhibit the distinct coloration on their tail and gradations may occur especially in young birds. Red-tailed hawks hunt rodents by soaring over grassland habitat. Nest trees for red-tailed hawks are usually tall trees with a well-developed canopy that includes a strong branching structure on which to build a nest.

The CNDDDB does not track occurrences of red-tailed hawk. However, a pair of red-tailed hawks were observed foraging on the Property during the May 2021 survey. There are no large trees on

the Property that would provide nesting habitat, and the only large trees adjacent to the property already contain an active Swainson's hawk nest, so it is extremely unlikely that another raptor species would nest in that area. However, there are numerous large trees in the surrounding landscape that may provide appropriate nesting habitat. Given the information above, it is unlikely that the red-tailed hawk will nest on the Property, but it is present in a foraging capacity.

White-tailed Kite (*Elanus leucurus*). Federal Species of Concern, CDFW: Fully Protected.

The white-tailed kite is falcon-shaped with a long white tail. This raptor has black patches on the shoulders that are highly visible while the bird is flying or perching. White-tailed kites forage in annual grasslands, farmlands, orchards, chaparral, and at the edges of marshes and meadows. They are found nesting in trees and shrubs such as willows (*Salix sp.*), California sycamore (*Platanus racemosa*), and coast live oak (*Quercus agrifolia*) often near marshes, lakes, rivers, or ponds. This raptor often hovers while inspecting the ground below for prey. The White-tailed Kite eats mainly small mammals, as well as some birds, lizards, and insects. Annual grasslands are considered good foraging habitat for white-tailed kites, which will forage in human-impacted areas.

A white-tailed kite was observed foraging on the Property during the May 2021 survey. The nearest CNDDDB occurrence of this species (#110) is located approximately 6.9 miles to the northeast of the Property in the City of Stockton. There are no large trees on the Property that would provide nesting habitat, and the only large trees adjacent to the property already contain an active Swainson's hawk nest, so it is extremely unlikely that another raptor species would nest in that area. However, there are numerous large trees in the surrounding landscape that may provide appropriate nesting habitat. Given the information above, it is unlikely that the white-tailed kite will nest on the Property, but it is present in a foraging capacity.

Burrowing Owl (*Athene cunicularia*). Federal Species of Special Concern, California Species of Special Concern.

The U.S. Fish and Wildlife Service has identified the burrowing owl as a "candidate" species. Candidate species are animals and plants that may warrant official listing as threatened or endangered, but there is no conclusive data to give them this protection at the present time. As a candidate species, burrowing owls receive no legal protection under the Endangered Species Act (ESA). However, this species does receive some legal protection from the U.S. through the Migratory Bird Treaty Act, which forbids the destruction of the birds and active nests. In California, the burrowing owl is considered a "species of special concern."

Burrowing owls are ground dwelling members of the owl family and are small brown to tan colored birds with bold spots and barring. Burrowing owls generally require open annual

grassland habitats in which to nest, but can be found on abandoned lots, roads, airports, and other urban areas. Burrowing owls generally use abandoned California ground squirrel holes for their nesting burrow, but are also known to use pipes or other debris for nesting purposes. Burrowing owls prefer annual grassland habitats with low vegetative cover. The breeding season for burrowing owls occurs from March through August. Burrowing owls often nest in loose colonies about 100 yards apart. They lay three to twelve eggs from mid-May to early June. The female incubates the clutch for about 28 days, while the male provides her with food. The young owls begin appearing at the burrow's entrance two weeks after hatching and leave the nest to hunt for insects on their own after about 45 days. The chicks can fly well at six weeks old.

CNDDDB listed seven occurrences of burrowing owl within five miles of the Property. The closest occurrence (Occurrence #342) was observed less than one mile east of the Property on the Sharpe Facility, part of the San Joaquin Depot. Numerous pairs have been observed nesting on the site since 1981, however there has been a sharp decline in their population starting in 2013. While there are numerous ground squirrel burrows on the Property, the intense annual disturbance of disking would likely preclude the species from establishing burrows. For this reason, the burrowing owl has a low potential to occur on the Property in nesting and foraging capacity and is not likely to occur.

Loggerhead Shrike (*Lanius ludovicianus*). Federal Species of Special Concern, California Species of Special Concern.

The loggerhead shrike is a black and white perching bird with a black face mask that extends over the bill. A common resident and winter visitor in lowlands and foothills throughout California. It prefers open habitats with scattered shrubs, trees, posts, fences, utility lines, or other perches. It occurs only rarely in heavily urbanized areas, but is often found in open cropland. This species hunts large insects, small rodents and even small birds. Loggerhead shrikes are known for their habit of impaling their food on thorns or barb wire for future consumption. The range and habitat for the loggerhead shrike has steadily shrunk due to human development within grasslands; however, this species is often found on lands grazed by cattle that are fenced with barb wire. These birds use shrubs, dense trees, and thickets of vegetation for nesting sites.

CNDDDB listed one occurrence of loggerhead shrike within five miles of the Property. Occurrence #112 is located approximately 2 miles south of the Property at the southern end of Lathrop. In 2016 a pair of birds were observed feeding 4 fledglings. While the property where the siting occurred has since been developed, the occurrence is presumed extant. There are no trees or shrubs on the Property that would provide nesting habitat. However, foraging habitat is

present throughout the Property. Given the information above the loggerhead shrike has low potential to occur in a foraging capacity only.

Swainson's Hawk (*Buteo swainsoni*). State Threatened.

The Swainson's hawk is a raptor that is slightly smaller than the red-tailed hawk with wings that taper slightly toward the outer wing tip. This hawk has a brown bib that covers its head and extends down the chest. The leading portion of the wing is light in color. In flight, this bird has an inverse color pattern in comparison to a red-tailed hawk. This hawk has three potential color morphs---light, intermediate and dark. Swainson's hawks are summer migrants to the Central Valley and Delta region where they nest within larger-sized trees.

Commonly, the Swainson's hawk builds platform nests in tall mature trees, often in the first fork of the tree---built with sticks, twigs and branches with green leaves. (blue gum, valley oak, live oak, pine, or other tall tree stands) These raptors require nearby foraging habitat such as annual grasslands, alfalfa fields, grain fields, and row crops.

Males perform aerial acrobatics to impress females. Maneuvers include soaring over nest, diving up to 50 feet and rapid wing beats. Breeding occurs late March to late August, with peak activity late May through July. Clutch size 2-4, usually 2 or 3 eggs. Incubation lasts 25-28 days and is done by male and female. Hatchings fledge 28-30 days after hatching. Males hunt and bring food to female who feeds the chicks. Chicks learn to hunt by watching and copying parents.

A Swainson's hawk was observed foraging on the Property and flew to a nest approximately 20 feet from the Property, in a large cottonwood tree (*Populus fremontii*) on the other side of Dos Reis Road. In addition, CNDDDB has 51 records of Swainson's hawk within five miles of the Property. Given the information above, Swainson's hawk is known to forage on the Property and nest immediately adjacent to the Property.

MAMMALS

Special-status Bats

Bats (Order – *Chiroptera*) are the only mammals capable of “true” flight. They are nocturnal feeders and locate their prey, which consists of small to medium sized insects by echolocation. Bats consume vast amounts of insects making them very effective pest control agents. They may eat as much as their weight in insects per day. Maternity roosts comprised of only females, may be found in buildings or mine shafts with temperatures up to 40 degrees Celsius and a high percentage of humidity to ensure rapid growth in the young. Female bats give birth to only one

or two young annually and roost in small or large numbers. Males may live singly or in small groups, but scientists are still unsure of the whereabouts of most males in summer.

Special-status bats with the potential to occur on the Property are listed below:

- Pallid bat (*Antrozous pallidus*)
- Western mastiff bat (*Eumops perotis californicus*)

There are no CNDDDB occurrences of either of these species within five miles of the Property. The nearest occurrence of pallid bat (#279) is located approximately 16 miles northeast of the Property in Farmington. Several specimens were collected in 1951. The nearest occurrence of western mastiff bat (#17) is located approximately 16.8 miles southwest of the Property at Castle Rock, east of Tracy. Two individuals were observed flying near the cliff face in 1991. The ruderal/disturbed grassland habitat on the Property could provide foraging habitat for both species, however there are no trees, rocks, or other structures that the bats may use for roosting. Given the above information, both bats have a moderate potential to occur on the Property in a foraging capacity only.

6.3.2 Critical Habitat

As shown in Figure 7, the Property falls within the critical habitat unit V01 for Delta smelt (*Hypomesus transpacificus*). Critical habitat was established for this species on December 19, 1994 (Federal Register 59 No. 242, pp. 65256-65279). As there are no wetlands or waters located on the Property, there will be no impact to the designated critical habitat.

7.0 CONCLUSIONS

7.1 Wetlands/Waters

Results of the biological resource analysis survey conducted by Olberding Environmental indicate that the Property likely does not contain wetlands or waters that would be considered jurisdictional by the Army Corps of Engineers, RWQCB, or CDFW. There are several areas on the Property that are slight topographic depressions. However, during the May 2021 survey there was no sign of any water ponding in these areas and a review of historic aerial imagery does not show any regular inundation. It is likely that the high sand content of the soil and regular tilling of the Property would facilitate these areas draining quickly after a rain event. Given the conditions present at the time of the site visit, there are no jurisdictional wetland or water features on the Property.

7.2 Special-status Plants

It was determined that there is no potential for any special status plants to occur on the Property. Due to the ruderal nature of the habitat, the lack of any wetland features, and the long history of regular tilling of the soils, there is no suitable habitat for any special-status plants to occur on the Property. Review of historic CNDDDB records and the site visit conclude that there is no potential for any special-status plants to occur on the Property.

7.3 Special-status Wildlife

Special-Status Invertebrates – Given the vegetation that was identified on the Property; VELB has a moderate potential to occur on the Property. A moderately sized, healthy elderberry shrub (host plant for the species) was identified on the western fence line of the Property (Figure 11). Additionally, there is one CNDDDB occurrence of this species (#158) located approximately 4.4 miles northwest the Property. The presence of the elderberry shrub on the Property in addition to the recent CNDDDB occurrence within five miles create the potential for VELB to occur on the Property.

Special-Status Amphibians – Due to the lack of any wetland or water features on the Property, there is no potential for any amphibians to occur on the Property.

Special-Status Reptiles – Given the presence of suitable onsite habitat; the California glossy snake and San Joaquin coachwhip have a low potential to occur on the Property. While the Property does provide open, dry habitat for hunting with plenty of mammal burrows, the regular disturbance of the soil would likely preclude the California glossy snake from utilizing the Property for reproduction. Also, while the Property does fall within the range for the San Joaquin coachwhip, all nearby CNDDDB occurrence are found at approximately 300 feet in elevation or higher, with the nearest occurrence in the Valley floor occurring nearly 100 miles south of the Property. For this reason, the San Joaquin coachwhip has only a low potential to occur on the Property.

Foraging or Nesting Raptor/Passerine Species – A total of four special-status bird species were identified as having a potential to occur on the Property, burrowing owl, Swainson's hawk, loggerhead shrike, and white-tailed kite. There are numerous ground squirrel and other mammal burrows among several raised berm areas on the Property that could serve as burrows for burrowing owl. However, during the May 2021 survey there were no signs of any burrowing owls among these areas. During the survey, a Swainson's hawk was observed using a nest approximately 20 feet from the Property, across Dos Reis Road. Due to the presence of the active Swainson's hawk nest among this small group of trees, it is unlikely that any other raptor or

passerine species would nest in this immediate vicinity, and there are no other potential nesting locations on or immediately adjacent to the Property. However, two red-tailed hawks and a white-tailed kite were observed foraging over the property, and it provides potential foraging habitat for the loggerhead shrike as well as other raptor species. A CNDDDB occurrence of yellow-headed blackbird (*Xanthocephalus xanthocephalus*) (Occurrence #5) intersects with the Property, but it was determined that there is no potential habitat for the species within the Property.

Special-Status Mammals – Given the presence of suitable onsite habitat; the pallid bat and western mastiff bat have a moderate potential to occur on the Property in a foraging capacity. However, due to the lack of any trees or other large structures on the Property, there is no potential for any roosting habitat. While the western mastiff bat is a Covered Species under the SJMSCP (SJCOG 2000), all incidental take minimization and mitigation measures involve nursery sites, which are not located on the Property. Therefore, no action will need to be taken for these species.

8.0 RECOMMENDATIONS

- **VELB Buffer and/or Survey** – VELB is a species covered by the SJMSCP (SJCOG 2000), and the incidental take minimization and mitigation measures outlined in the document are as follows:

“In areas with elderberry bushes, as indicated by the SJMSCP Vegetation Maps or per a preconstruction survey identification or other sources indicated in Section 5.2.2.3, the following shall occur:

A. If elderberry shrubs are present on the project site, a setback of 20 feet from the dripline of each elderberry bush shall be established.

B. Brightly colored flags or fencing shall be placed surrounding elderberry shrubs throughout the construction process.

C. For all shrubs without evidence of VELB exit holes which cannot be retained on the project site as described in A and B, above, the JPA shall, during preconstruction surveys, count all stems of 1" or greater in diameter at ground level. Compensation for removal of these stems shall be provided by the JPA within SJMSCP Preserves as provided in SJMSCP Section 5.5.4(B).

D. For all shrubs with evidence of VELB exit holes, the JPA shall undertake transplanting of elderberry shrubs displaying evidence of VELB occupation to VELB

mitigation sites during the dormant period for elderberry shrubs (November 1 - February 15). For elderberry shrubs displaying evidence of VELB occupation which cannot be transplanted, compensation for removal of shrubs shall be as provided in SJMSCP Section 5.5.4 (C)."

If the elderberry shrub can be maintained on the Property, then a 20 ft. setback will need to be established around the shrub (See Figure 11). If the shrub cannot be maintained on the Property, then VELB exit hole surveys consistent with the USFWS protocol (USFWS 2017) will be performed prior to any ground disturbance. Depending on the results of this survey, either mitigation measure C or D above will be used.

- **Pre-construction Reptile Survey** – Both California glossy snake and San Joaquin coachwhip have a low potential to occur on the Property and therefore a pre-construction survey should be performed no more than 48 hours prior to ground disturbance or vegetation removal. Surveys would be required to determine presence/absence of this species. If the species are found to occur on the Property, then passive relocation methods should be attempted before ground disturbance.
- **Pre-Construction Avian Survey** – If project construction-related activities would take place during the nesting season (February through August), preconstruction surveys for nesting passerine birds and raptors (birds of prey) in large trees adjacent to the Property should be conducted by a competent biologist 14 days prior to the commencement of the tree removal or site grading activities. Specific attention should be paid to the active Swainson's hawk nest that was identified across Dos Reis Road from the Property. As per the Incidental Take Minimization Measures for Swainson's hawk that are outlined in Section 5.2.4.11 of the SJMSCP (SJCOG 2000):

"If a nest tree becomes occupied during construction activities, then all construction activities shall remain a distance of two times the dripline of the tree, measured from the nest."

The dripline for the tree where the Swainson's hawk nest was observed is estimated to be 25 feet, making the required buffer for this nest 50 feet. The nest location and buffer are shown on Figure 11.

If any other birds listed under the Migratory Bird Treaty Act are found to be nesting within the project site or within the area of influence, an adequate protective buffer zone should be established by a qualified biologist to protect the nesting site. This buffer shall be a minimum of 50 feet from the project activities for passerine birds, and a minimum of

250 feet for other raptors. The distance shall be determined by a competent biologist based on the site conditions (topography, if the nest is in a line of sight of the construction and the sensitivity of the birds nesting). The nest site(s) shall be monitored by a competent biologist periodically to see if the birds are stressed by the construction activities and if the protective buffer needs to be increased. Once the young have fledged and are flying well enough to avoid project construction zones (typically by August), the project can proceed without further regard to the nest site(s).

- **Burrowing Owl Surveys** – Burrowing owls were not identified on the property during May 2021 survey. However, a burrowing owl pre-construction survey should take place before any construction activities commence. It is recommended that they be conducted whenever burrowing owl habitat or sign is encountered on or adjacent to (within 150 meters) a project site. Occupancy of burrowing owl habitat is confirmed at a site when at least one burrowing owl or its sign at or near a burrow entrance is observed within the last three years. If a burrowing owl or sign is present on the Property three additional protocol level surveys will be initiated. As per the incidental take minimization and mitigation measures outlined in the SJMSCO (SJCOG 2000): If burrowing owls are identified and work is to commence during the non-breeding season (September 1 through January 31), then the owls should be evicted from the Property by passive relocation as described in the CDFW’s report on burrowing owls (1995). If work occurs during the breeding season (February 1 through August 31) then the burrows shall not be disturbed and will be provided with a 75-meter protective buffer. However, if it is determined that the birds have not begun laying eggs, or the juveniles from the occupied burrows are foraging independently and are capable of independent survival, then the burrows can be destroyed.
- **Erosion Control** – Grading and excavation activities could expose soil to increased rates of erosion during construction periods. During construction, runoff from the Property could adversely surrounding habitats and cause increased particulate matter to enter the storm drain system. Implementation of appropriate mitigation measures would ensure that impacts to aquatic systems would be avoided or minimized. Mitigation measures may include best management practices (BMP’s) such as hay bales, silt fencing, placement of straw mulch and hydro seeding of exposed soils after construction as identified in the Storm Water Pollution Prevention Plan (SWPPP).

TABLES

Table 1

Plant and Wildlife Species Observed

Within/Adjacent to the Survey Area

Table 1

Wildlife Species Observed Within/Adjacent to the Survey Area

Scientific Name	Common Name
Plant Species Observed	
<i>Avena fatua</i>	Wild oat
<i>Amsinckia</i> sp.	Fiddleneck
<i>Brassica nigra</i>	Black mustard
<i>Bromus diandrus</i>	Ripgut brome
<i>Bromus hordeaceus</i>	Soft chess
<i>Carduus pycnocephalus</i>	Italian thistle
<i>Centaurea solstitialis</i>	Yellow star thistle
<i>Centromadia parryi</i> ssp. <i>rudis</i>	Pappose tarweed
<i>Convolvulus arvensis</i>	Field bindweed
<i>Croton setigerus</i>	Turkey mullein
<i>Digitaria sanguinalis</i>	Crabgrass
<i>Epilobium</i> sp.	Willow herb
<i>Erodium</i> sp.	Filaree
<i>Festuca perennis</i>	Italian rye grass
<i>Heliotropium curassavicum</i>	Chinese parsley
<i>Hordeum marinum</i>	Mediterranean barley
<i>Raphanus raphanistrum</i>	Wild radish
<i>Melilotus indicus</i>	Annual sweet clover
<i>Sambucus</i> sp.	Elderberry
Animal Species Observed	
Invertebrate	
<i>Latrodectus hesperus</i>	Western black widow
Birds	
<i>Buteo jamaicensis</i>	Red-tailed hawk
<i>Buteo swainsoni</i>	Swainson's hawk
<i>Elanus leucurus</i>	White-tailed kite
Mammals	
<i>Canis latrans</i>	Coyote
<i>Otospermophilus beecheyi</i>	California ground squirrel
Reptiles	
<i>Sceloporus occidentalis</i>	Western fence lizard

Table 2

**Special-Status Species for the Lathrop, Holt, Stockton East,
Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon
7.5 Minute Quadrangle Maps**

Table 2

Special-Status Species for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon 7.5 Minute Quadrangle Maps¹

Common Name/Scientific Name	Status (Fed/State/CNPS or CDFW)²	Blooming or Survey Period	Habitats of Occurrence	Potential on Site	Status on Site**
PLANTS					
alkali milk-vetch (<i>Astragalus tener</i> var. <i>Tener</i>)	-/-1B.2	March – June	Playas, valley and foothill grasslands, and vernal pools in alkaline soils. Micro habitat consists of low ground, alkali flats, and flooded lands	Low No suitable habitat present	Presumed absent.
Alkali-sink goldfields (<i>Lasthenia chrysantha</i>)	-/-1B.1	February – June	Vernal pools and wet, saline flats.	Low No suitable habitat present	Presumed absent.
Big tarplant (<i>Blepharizonia plumosa</i>)	-/-1B.1	July – October	Valley and foothill grasslands, usually with clay soils.	Low Grassland present within Survey Area, but no clay soils.	Presumed absent.
Bristly sedge (<i>Carex comosa</i>)	-/-2B.1	May – September	Coastal prairies, marshes, swamps and lake margins, and valley and foothill grasslands	Low No suitable habitat present	Presumed absent.

Table 2

Special-Status Species for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon 7.5 Minute Quadrangle Maps¹

Common Name/Scientific Name	Status (Fed/State/CNPS or CDFW)²	Blooming or Survey Period	Habitats of Occurrence	Potential on Site	Status on Site**
California alkali grass (<i>Puccinellia simplex</i>)	-/1B.2	March – May	Usually occurs in wetlands, but occasionally found in non-wetlands. Generally grows in mineral springs and saline soils	Low No suitable habitat present	Presumed absent.
Caper-fruited tropidocarpum (<i>Tropidocarpum capparideum</i>)	-/1B.1	March – April	Valley and foothill grasslands on alkaline hills.	Low No suitable habitat present	Presumed absent.
Delta button-celery (<i>Eryngium racemosum</i>)	-/E/1B.1	June – October	Riparian scrub, among vernal mesic clay depressions.	Low No suitable habitat present	Presumed absent.
Delta mudwort (<i>Limosella australis</i>)	T/E/-	May – August	Freshwater and brackish marshes and swamps, riparian scrub, usually found among muddy banks.	Low No suitable habitat present	Presumed absent.

Table 2

Special-Status Species for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon 7.5 Minute Quadrangle Maps¹

Common Name/Scientific Name	Status (Fed/State/CNPS or CDFW)²	Blooming or Survey Period	Habitats of Occurrence	Potential on Site	Status on Site^{**}
Delta tulle pea (<i>Lathyrus jepsonii</i> var. <i>jepsonii</i>)	-/-/1B.2	May – September	Freshwater and brackish marshes and swamps.	Low No suitable habitat present	Presumed absent.
Diamond-petaled California poppy (<i>Eschscholzia rhombipetala</i>)	-/-/1B.1	March – April	Valley and foothill grasslands with alkaline or clay soils.	Low No suitable habitat present	Presumed absent.
Heartscale (<i>Atriplex cordulata</i> var. <i>cordulata</i>)	-/-/1B.2	April – October	Found in saline or alkaline soils among chenopod scrub, meadows and seeps, and valley and foothill grasslands with sandy soils.	Low Habitat is regularly disked and historically disturbed.	Presumed absent.
Large-flowered fiddleneck (<i>Amsinckia grandiflora</i>)	E/E/1B.1	April – May	Cismontane woodland, valley and foothill grassland, annual grassland in various soils.	Low Habitat is regularly disked and historically	Presumed absent.

Table 2

Special-Status Species for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon 7.5 Minute Quadrangle Maps¹

Common Name/Scientific Name	Status (Fed/State/CNPS or CDFW)²	Blooming or Survey Period	Habitats of Occurrence	Potential on Site	Status on Site^{**}
Lesser saltscale (<i>Atriplex minuscula</i>)	-/-/1B.1	May – October	Alkaline and sandy soils among chenopod scrub, playas, and valley and foothill grasslands	Low Habitat is regularly disked and historically disturbed.	Presumed absent.
Mason's lilaepsis (<i>Lilaeopsis masonii</i>)	-/R/1B.1	April – November	Brackish or freshwater marshes and swamps and riparian scrub areas.	Low No suitable habitat present	Presumed absent.
Palmate-bracted bird's-beak (<i>Chloropyron palmatum</i>)	E/E/1B.1	May – October	Annual herb occurring in alkaline soils within chenopod scrub and valley and foothill grassland habitats	Low No suitable habitat present	Presumed absent.
Recurved larkspur (<i>Delphinium recurvatum</i>)	-/-/1B.2	March – June	Alkaline soils among chenopod scrub, cismontane woodland, and valley and foothill grasslands	Low No suitable habitat present	Presumed absent.
saline clover (<i>Trifolium hydrophilum</i>)	-/-/1B.2	April – June	Marshes and swamps, valley and foothill grasslands with mesic, alkaline soils, and vernal pools.	Low No suitable habitat present	Presumed absent.

Table 2

Special-Status Species for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon 7.5 Minute Quadrangle Maps¹

Common Name/Scientific Name	Status (Fed/State/CNPS or CDFW)²	Blooming or Survey Period	Habitats of Occurrence	Potential on Site	Status on Site**
San Joaquin spearscale (<i>Atriplex joaquiniana</i>)	-/-/1B.2	April-October	Chenopod scrub, meadows and seeps, playas, valley and foothill grassland in seasonal alkali wetlands or alkali sink scrub with <i>Distichlis spicata</i> , <i>Frankenia</i> , etc.	Low No suitable habitat present	Presumed absent.
Sanford's arrowhead (<i>Sagittaria sanfordii</i>)	-/-/1B.2	May – November	Marshes and swamps, and other assorted shallow freshwater features.	Low No suitable habitat present	Presumed absent.
Showy golden madia (<i>Madia radiata</i>)	-/-/1B.1	March – May	Cismontane woodlands and valley and foothill grasslands.	Low Habitat is regularly disked and historically disturbed.	Presumed absent.
Slough thistle (<i>Cirsium crassicaule</i>)	/-/-/1B.1	May – August	Chenopod scrub, marshes and swamps including sloughs, and riparian scrub areas.	Low No suitable habitat present	Presumed absent.
Suisun Marsh aster (<i>Symphyotrichum lentum</i>)	-/-/1B.2	April – November	Brackish and freshwater marshes and swamps.	Low No suitable habitat present	Presumed absent.

Table 2

Special-Status Species for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon 7.5 Minute Quadrangle Maps¹

Common Name/Scientific Name	Status (Fed/State/CNPS or CDFW)²	Blooming or Survey Period	Habitats of Occurrence	Potential on Site	Status on Site**
Watershield (<i>Brasenia schreberi</i>)	-/-/2B.3	June – September	Aquatic species found in freshwater marshes and swamps.	Low No suitable habitat present	Presumed absent.
Woolly rose-mallow (<i>Hibiscus lasiocarpus</i> var. <i>occidentalis</i>)	-/-/1B.2	June – September	Freshwater marshes and swamps, often among the riprap on levee sides.	Low No suitable habitat present	Presumed absent.
Wright’s trichocoronis (<i>Trichocoronis wrightii</i> var. <i>wrightii</i>)	-/-/2B.1	May – September	Alkaline soils among meadows and seeps, marshes and swamps, riparian forest, and vernal pools.	Low No suitable habitat present	Presumed absent.
Invertebrates					
Conservancy fairy shrimp (<i>Branchinecta conservatio</i>)	E/-/-	Resident	Prefer large, turbid vernal pools, often referred to as playa pools. Often stay inundated will into the summer months.	Low No suitable habitat present	Presumed absent.
Crotch bumble bee (<i>Bombus crotchii</i>)	-/CE/-	Resident	Inhabits grassland and scrub areas, requiring hotter and drier environment than many bumble bee species. They nest underground, often in abandoned rodent dens and requires undisturbed nesting and winter sites.	Low Habitat is regularly disked and historically disturbed.	Presumed absent.

Table 2

Special-Status Species for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon 7.5 Minute Quadrangle Maps¹

Common Name/Scientific Name	Status (Fed/State/CNPS or CDFW)²	Blooming or Survey Period	Habitats of Occurrence	Potential on Site	Status on Site**
Valley elderberry longhorn beetle <i>(Desmocerus californicus dimorphus)</i>	T/-/-	Resident	Only found in association with its host plant, elderberry (<i>Sambucus</i> spp.). Most occurrences are found below 500 feet in elevation.	Moderate An elderberry shrub is located adjacent to the Survey Area.	May Occur.
Vernal pool fairy shrimp <i>(Branchinecta lynchi)</i>	T/-/-	Resident	Endemic to central valley vernal pools and swales.	Low No suitable habitat present	Presumed absent.
Vernal pool tadpole shrimp <i>(Lepidurus packardii)</i>	E/-/-	Resident	Wide variety of ephemeral wetland habitats, small to large, cool to warm, basic to acidic water features.	Low No suitable habitat present	Presumed absent.
Western bumble bee <i>(Bombus occidentalis occidentalis)</i>	-/CE/-	February – November	Meadows and grasslands with abundant flora resources that provide pollen and nectar throughout their flight period. Typically nest underground, but may nest above ground in tree cavities, etc.	Low Grassland areas in the Survey Area are disked annually and do not support abundant flora.	Presumed absent.
Fish					

Table 2

Special-Status Species for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon 7.5 Minute Quadrangle Maps¹

Common Name/Scientific Name	Status (Fed/State/CNPS or CDFW)²	Blooming or Survey Period	Habitats of Occurrence	Potential on Site	Status on Site**
Delta smelt (<i>Hypomesus transpacificus</i>)	T/E/-	Resident	Endemic to the upper reaches of the San Francisco Bay Delta-Bay Estuary. Generally found in brackish water.	Low No suitable habitat present	Presumed absent.
Hardhead (<i>Mylopharodon conocephalus</i>)	-/-/SSC	Resident	Low to mid-elevations in relatively undisturbed habitats of larger streams. They prefer pools and runs with deep, clear water, slow velocities, and sand-gravel-boulder substrates.	Low No suitable habitat present	Presumed absent.
Steelhead – Central Valley DPS (<i>Oncorhynchus mykiss irideus</i> pop. 11)	T/-/-	Resident	Cool, clear, well-oxygenated water preferred. Prefer complex structured river systems with large boulders, etc.	Low No suitable habitat present	Presumed absent.
Amphibians					
California red-legged frog (<i>Rana draytonii</i>)	T/-/SSC	May 1 – November 1	Lowlands and foothills in or near permanent deep water with dense, shrubby or emergent riparian habitat. Requires 11-20 weeks of permanent water for breeding and larval development. Must have access to aestivation habitat.	Low No suitable habitat present	Presumed absent.

Table 2

Special-Status Species for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon 7.5 Minute Quadrangle Maps¹

Common Name/Scientific Name	Status (Fed/State/CNPS or CDFW)²	Blooming or Survey Period	Habitats of Occurrence	Potential on Site	Status on Site**
California tiger salamander (<i>Ambystoma californiense</i>)	T/T/-	Aquatic Surveys – Once each in March, April, and May with at least 10 days between surveys. Upland Surveys – 20 nights of surveying under proper conditions beginning October 15 and ending March 15.	Vernal pools, swales and depressions for breeding, needs underground refugia.	Low No suitable habitat present	Presumed absent.
foothill yellow-legged frog (<i>Rana boylei</i>)	-/E/SSC	Year-round resident	Partially-shaded, shallow streams and riffles with a rocky substrate in a variety of habitats. Need cobble for egg-laying.	Low No suitable habitat present	Presumed absent.
Western spadefoot (<i>Spea hammondi</i>)	-/-/SSC	Resident	Found primarily in grasslands, but also in valley-foothill hardwood woodlands. Breeding and egg-laying occur exclusively in vernal pools.	Low No suitable habitat present	Presumed absent.
Reptiles					

Table 2

Special-Status Species for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon 7.5 Minute Quadrangle Maps¹

Common Name/Scientific Name	Status (Fed/State/CNPS or CDFW)²	Blooming or Survey Period	Habitats of Occurrence	Potential on Site	Status on Site**
California glossy snake (<i>Arizona elegans occidentalis</i>)	-/-/SSC	May – June, and prior to first fall rain.	Most common in desert habitats, but also occur in chaparral, sage brush, valley-foothill hardwood, pine-juniper, and annual grasslands.	Low Annual grasslands with friable soils occur within the Survey Area, but regularly disturbed.	Not Likely to Occur.
Coast horned lizard (<i>Phrynosoma blainvillii</i>)	-/-/SSC	Year-round resident	Frequents a wide variety of habitats, most common in lowlands along sandy washes with scattered low bushes; requires open areas for sunning, bushes for cover, patches of loose soil for burial, and abundant supply of ants and other insects.	Low Survey Area is disked annually and does not provide bushes for cover.	Presumed absent.
Giant gartersnake (<i>Thamnophis gigas</i>)	T/T/-	May 1 to October 1	Found in the Valley from the City of Chico, south to the Mendota Wildlife Area in Fresno County. Habitat includes marshes, sloughs, ponds, small lakes, low gradient streams, and other waterways and agricultural lands such as irrigation and drainage canals, rice fields, and the adjacent uplands.	Low No suitable habitat present	Presumed absent.

Table 2

Special-Status Species for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon 7.5 Minute Quadrangle Maps¹

Common Name/Scientific Name	Status (Fed/State/CNPS or CDFW)²	Blooming or Survey Period	Habitats of Occurrence	Potential on Site	Status on Site**
San Joaquin coachwhip (<i>Masticophis flagellum</i>)	-/-/SSC	Year-round Resident	Open, dry habitats with little or no tree cover; found in valley grassland and saltbush scrub in the San Joaquin Valley; needs mammal burrows for refuge and oviposition sites.	Low Open, dry grasslands found in the Survey Area.	Not Likely to Occur.
Western pond turtle (<i>Emys marmorata</i>)	-/-/SSC	March – October	Aquatic turtle needs permanent water in ponds, streams, irrigation ditches. Nests on sandy banks or grassy fields.	Low No suitable habitat present	Presumed absent.
Birds					
burrowing owl (<i>Athene cunicularia</i>)	-/-/SCC	February – August	Dry open annual or perennial grassland, desert, and scrubland. Uses abandoned mammal burrows for nesting.	Low Grassland and mammal burrows occur within the Survey Area.	Not Likely to Occur.
California black rail (<i>Laterallus jamaicensis coturniculus</i>)	-/T/FP	Dawn surveys during breeding season (April – May)	Inhabits saltwater, brackish, and freshwater marshes. Typically prefers areas of “high marsh” that are above any annual or daily water fluctuations.	Low No suitable habitat present	Presumed absent.

Table 2

Special-Status Species for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon 7.5 Minute Quadrangle Maps¹

Common Name/Scientific Name	Status (Fed/State/CNPS or CDFW)²	Blooming or Survey Period	Habitats of Occurrence	Potential on Site	Status on Site^{**}
Least Bell's vireo (<i>Vireo bellii pusillus</i>)	E/E/-	8 surveys between April 10 and July 31	Structurally diverse riparian habitat, including cottonwood-willow forests, oak woodlands, and mule fat scrub.	Low No suitable habitat present	Presumed absent.
Loggerhead shrike (<i>Lanius ludovicianus</i>)	-/-/SSC	February – August	Open grassland habitats, grazed grasslands. Uses shrubs for nesting.	Low Survey Area provides foraging habitat.	Not Likely to Occur.
Song sparrow ("Modesto" population) (<i>Melospiza melodia</i>)	-/-/SSC	February – August	Prefer emergent freshwater marshes dominated by tules (<i>Scirpus</i> spp.) and cattails (<i>Typha</i> spp.) as well as riparian willow (<i>Salix</i> spp.) thickets, and riparian forests of Valley Oak (<i>Quercus lobata</i>) with blackberry (<i>Rubus</i> spp.) understory.	Low No suitable habitat present	Presumed absent.
Swainson's hawk (<i>Buteo swainsoni</i>)	-/T/-	February – October	Nests in riparian areas and in oak savannah near foraging areas. Forages in alfalfa and grain fields with rodent populations.	High Survey Area provides foraging habitat.	Observed foraging and active nest immediately adjacent to Survey Area.

Table 2

Special-Status Species for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon 7.5 Minute Quadrangle Maps¹

Common Name/Scientific Name	Status (Fed/State/CNPS or CDFW)²	Blooming or Survey Period	Habitats of Occurrence	Potential on Site	Status on Site**
tricolored blackbird (<i>Agelaius tricolor</i>)	-/T/SSC	February – August	Nesting within seasonal wetland marshes, blackberry brambles or other protected substrates. Forages in annual grassland and wetland habitats.	Low No suitable habitat present	Presumed absent.
Western yellow-billed cuckoo (<i>Coccyzus americanus occidentalis</i>)	T/E/-	June 15 – August 15	Wooded habitat with dense cover and water nearby, including woodlands with low, scrubby vegetation. Nests are often placed in willows along streams and rivers with nearby cottonwoods.	Low No suitable habitat present	Presumed absent.
white-tailed kite (<i>Elanus leucurus</i>)	-/-/FP	February – August	Various grassland habitats, urban land, oak woodlands with grassland for foraging.	High Survey Area provides foraging habitat.	Individual observed during May 2021 Survey.
Yellow-headed blackbird (<i>Xanthocephalus xanthocephalus</i>)	-/-/SSC	February – August	Marshes with tall emergent vegetation such as tules (<i>Scripus</i> spp.) or cattails (<i>Typha</i> spp.) among edges and over relatively deep water.	Low No suitable habitat present	Presumed absent.
Mammals					

Table 2

Special-Status Species for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon 7.5 Minute Quadrangle Maps¹

Common Name/Scientific Name	Status (Fed/State/CNPS or CDFW)²	Blooming or Survey Period	Habitats of Occurrence	Potential on Site	Status on Site**
American badger (<i>Taxidea taxus</i>)	-/-/SSC	Resident	Shrub, forest, and herbaceous habitats with friable soils to dig burrows. Need open, uncultivated ground. Prey on fossorial mammals.	Low No suitable habitat present	Presumed absent.
Pallid bat (<i>Antrozous pallidus</i>)	-/-/SSC	N/A	Forages in grasslands, shrublands, deserts, forests, and woodlands. Most common in open, dry habitats. Roosts in rock crevices, caves, tree hollows, and buildings. Roosts must protect bats from high temperatures; very sensitive to disturbance of roosting sites.	Moderate Survey Area contains foraging habitat.	Not likely to Occur.
Riparian (=San Joaquin Valley) woodrat (<i>Neotoma fuscipes riparia</i>)	E/-/SSC	Resident	Prefer habitat with large amount of overall structure, with both understory and overstory cover. Most often observed in areas with an oak (<i>Quercus</i>) overstory and an understory of wild grape (<i>Vitis californica</i>), willow (<i>Salix</i> spp.), blackberry (<i>Rubus</i> spp.), wild rose (<i>Rosa californica</i>), or coyote bush (<i>Baccharis pilularis</i>).	Low No suitable habitat present	Presumed absent.
Riparian brush rabbit (<i>Sylvilagus bachmani riparius</i>)	E/E/-	Resident	Restricted to native riparian habitat along the San Joaquin River and its tributaries. Typically found among old-growth riparian forests dominated by Valley oak (<i>Quercus lobata</i>) with a thick understory and riparian communities dominated by willows (<i>Salix</i> spp.) with blackberry (<i>Rubus</i> spp.) and wild rose (<i>Rosa californica</i>).	Low No suitable habitat present	Presumed absent.

Table 2

Special-Status Species for the Lathrop, Holt, Stockton East, Stockton West, Union Island, Manteca, Tracy, Vernalis, and Ripon 7.5 Minute Quadrangle Maps¹

Common Name/Scientific Name	Status (Fed/State/CNPS or CDFW)²	Blooming or Survey Period	Habitats of Occurrence	Potential on Site	Status on Site^{**}
San Joaquin kit fox (<i>Vulpes macrotis mutica</i>)	E/T/-	Resident	Annual grasslands or grassy stages with scattered shrubby vegetation. Needs loose soils for burrowing.	Low No suitable habitat present	Presumed absent.
Townsend's big-eared bat (<i>Corynorhinus townsendii</i>)	-/-/SSC	Resident	Throughout California in a wide variety of habitats; roosts in the open, hanging from walls and ceilings. Needs sites free from human disturbance. Most common in mesic sites.	Low No suitable habitat present	Presumed absent.
western mastiff bat (<i>Eumops perotis californicus</i>)	-/-/SSC	Resident	Many open, semi-arid to arid habitats, including conifer and deciduous woodlands, coastal scrub, grasslands, chaparral, etc. Roosts in crevices in cliff faces, high buildings, trees, and tunnels.	Moderate Survey Area contains foraging habitat.	Not likely to Occur.

Re: Preliminary Geotechnical Engineering Report
Dos Reis Ranch
14101 South Manthey Road
Lathrop, California
Terracon Project No. NA215014

Dear Mr. Asmus:

We have completed the Preliminary Geotechnical Engineering services for the above referenced project. This study was performed in general accordance with Terracon Proposal No. PNA215014, final revision dated May 7, 2021. This report presents the findings of the subsurface exploration and provides preliminary geotechnical recommendations concerning earthwork and the design and construction of foundations, floor slabs, and pavements for the proposed project. Our recommendations are preliminary given the early stage of site development and planning. Additional field explorations and testing will be warranted during the later stages of development and planning.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning this report or if we may be of further service, please contact us.

Sincerely,

Terracon Consultants, Inc.

Preliminary Geotechnical Engineering Report

**Dos Reis Ranch
14101 South Manthey Road
Lathrop, California
Terracon Project No. NA215014
August 16, 2021**

INTRODUCTION

This report presents the results of our subsurface exploration and geotechnical engineering services performed for the proposed warehouse and retail development to be located at 14101 South Manthey Road in Lathrop, California. The purpose of these services is to provide information and preliminary geotechnical engineering recommendations relative to:

- Subsurface soil conditions
- Groundwater conditions
- Site preparation and earthwork
- Excavation considerations
- Seismic design parameters per the 2019 California Building Code (CBC)
- Foundation design and construction
- Floor slab design and construction
- Lateral earth pressures
- Pavement design and construction
- Stormwater pond considerations

Our recommendations are preliminary given the early stage of site development and planning. Additional field explorations and testing will be warranted during the later stages of development and planning.

The geotechnical engineering Scope of Services for this project included the advancement of seventeen (17) test borings to depths ranging from approximately 16½ to 51½ feet below existing site grades (bgs) and two (2) sCPT tests to depths of 100 feet bgs. Additionally, four (4) percolation tests were performed at depths of approximately 4 to 5 feet bgs.

Maps showing the site and boring locations are shown in the **Site Location** and **Exploration Plan** sections, respectively. The results of the laboratory testing performed on soil samples obtained from the site during the field exploration are included on the boring logs and as separate graphs in the **Exploration Results** section.

SITE CONDITIONS

The following description of site conditions is derived from our site visit in association with the field exploration and our review of publicly available geologic and topographic maps.

Item	Description
Parcel Information	<p>The project is located at 14101 South Manthey Road in Lathrop, California. APN: 191-220-14 (90 acres) APN: 191-220-60 (34 acres) The site encompasses about 127 acres in total. The coordinates of the approximate center of the site are 37.8319°N and 121.2935°W (See Exhibit D)</p>
Existing Improvements	<p>The site is currently vacant land. Historic imagery suggests the site was used as agricultural land up to 2005. Several piles of fill are in various locations on site.</p>
Current Ground Cover	<p>The site is lightly vegetated with native grasses and weeds. The entire site has been disked recently.</p>
Existing Topography	<p>The site appears is relatively flat; however, there are some gentle minor rolling hills with grade changes of about 5 feet or less.</p>
Geology	<p>Subsurface soils on site are mixed alluvium, generally silty sands and silts underlain by clays interbedded with more silt and sand. Geology consists of Pleistocene to Holocene age quaternary alluvium and marine deposits.</p>

We also collected photographs at the time of our field exploration program. Representative photos are provided in our [Photography Log](#).

PROJECT DESCRIPTION

Our initial understanding of the project was provided in our proposal and was discussed during project planning. A period of collaboration has transpired since the project was initiated, and our final understanding of the project conditions is as follows:

Item	Description
Information Provided	<p>A site plan as well as general project information was provided by Hodgdon via email on February 10, 2021. Additional information regarding the seismic studies was discussed in a call on March 1, 2021. Additional information regarding the building layout was discussed in a call on April 28, 2021. More discussion about scope was communicated in a call on May 7, 2021.</p>
Project Description	<p>The project includes development of the site for a warehouse building with associated docking bays, drive lanes, truck parking, above and/or below ground stormwater features, and additional site improvements. We understand the building is planned on the north side of the site and portions of the land not used for the warehouse may be used for retail development. Specifics regarding the retail development was not provided at this time.</p>

Item	Description
Proposed Structures	The project includes a single-story, 40' clear, tilt-up wall warehouse building with interior steel framing and a footprint of about 1.5 million square feet; this will likely be supported on a shallow foundation system with slab-on-grade (non-basement) and dock high loading areas. The building may also include some interior mezzanines.
Finished Floor Elevation	Unknown but anticipated to be within about 3 to 4 feet of original grade.
Maximum Loads (as provided) Maximum Loads (assumed)	Warehouse: <ul style="list-style-type: none"> ■ Columns: 120 - 160 kips ■ Walls: 6 to 8 kips per linear foot (klf) ■ Slabs: 1000 pounds per square foot (psf) Retail: <ul style="list-style-type: none"> ■ Columns: 20 - 40 kips ■ Walls: 1 to 3 kips per linear foot (klf) ■ Slabs: 150 pounds per square foot (psf)
Grading/Slopes	Minor cuts and fills on the order of 3 to 4 feet or less are expected to achieve final site grades for the building and paving portions of the development.
Below-Grade Structures	None anticipated
Free-Standing Retaining Walls	Retaining walls (dock high) may be constructed as part of site development to achieve final grades. Lateral earth pressure design parameters will be provided.
Pavements	Paved driveways and parking will be constructed on all sides of the building. We understand both rigid (concrete) and flexible (asphalt) pavement sections should be considered. Anticipated traffic indices are as follows: <ul style="list-style-type: none"> ■ Autos Parking areas: TI = 4.5 ■ Auto and light truck Driving lanes: TI = 5.5 ■ Light delivery and trash collection vehicle areas: TI = 6.5 ■ Loading docks (ADTT=35): TI = 8.0 ■ Truck entrances and pathways (ADTT=100): TI = 9.5 ■ Truck entrances and pathways (10 million ESAL or ADTT=750): TI = 12.0 The pavement design period is 20 years
Estimated Start of Construction	Unknown

GEOTECHNICAL CHARACTERIZATION

We have developed a general characterization of the subsurface conditions based upon our review of the subsurface exploration, laboratory data, geologic setting and our understanding of the project. This characterization forms the basis of our geotechnical calculations and evaluation of site preparation and foundation options. Conditions encountered at each exploration point are

indicated on the individual logs. The individual boring and CPT logs can be found in the **Exploration Results** section of this report.

The near surface soils generally consisted of very to medium dense silty sand and sandy silt soils that extended to depths of approximately 6½ to 10 feet below ground surface (bgs). The upper soils were generally underlain by a 4 to 10-foot-thick layer of stiff to hard, medium to high plasticity clay soils. This layer was generally underlain by sand with varying amounts of silt, silt with varying amounts of sand and clay extending to the maximum depth explored of 51½ feet in our borings.

Groundwater

The boreholes were observed while drilling and immediately after completion for the presence and level of groundwater. Groundwater was encountered at depths of between approximately 4.5 and 17.5 feet bgs. Groundwater data is presented in the table below:

Boring Number	Depth to Groundwater While Drilling, ft.	Depth to Groundwater Immediately after Drilling, ft.	Elevation of Groundwater Immediately after Drilling, ft. ¹
1	8	10	2
2	14	12	1
3	15	7	3
4	14	13	-1
5	11	10	4
6	10	17.5	-3.5
7	8	6	7
8	10	15	0
9	8	8.5	4.5
10	12	12	2
11	9	4.5	11.5
12	15	10	2
13	10	9.5	4.5
14	10	8	6
15	Mud Rotary ²	Mud Rotary ²	Mud Rotary ²
16	10	8.5	4.5
17	12	11.5	1.5

Boring Number	Depth to Groundwater While Drilling, ft.	Depth to Groundwater Immediately after Drilling, ft.	Elevation of Groundwater Immediately after Drilling, ft. ¹
---------------	--	--	---

1. Elevations were estimated using Google Earth TM and the accuracy is limited to info presented on Google Earth.
2. Water was added to the boring before encountering groundwater while switching to mud rotary drilling methods. Therefore, accurate groundwater data could not be obtained.

Groundwater level fluctuations occur due to seasonal variations in the amount of rainfall, runoff and other factors not evident at the time the borings were drilled. Therefore, groundwater levels during construction or at other times in the life of the project may be higher or lower than the levels indicated on the boring logs. The possibility of groundwater level fluctuations should be considered when developing the design and construction plans for the project. Based on our experience in the area with similar projects, we have installed monitoring wells early on in the development phases to monitor the groundwater seasonally to aid in design and planning for the elements of the project that are sensitive to groundwater depth. We recommend installing these monitoring wells for this project.

GEOTECHNICAL OVERVIEW

Based on subsurface conditions encountered in the borings, the site appears suitable for the proposed construction from a geotechnical point of view provided certain precautions and design and construction recommendations described in this report are followed and the owner understands the inherent risks associated with construction on sites underlain by expansive soils. We have identified several geotechnical conditions that could impact design, construction and performance of the proposed structures, pavements, and other site improvements. These included existing, undocumented fill, shallow groundwater, expansive soils, and loose granular soils. These conditions will require particular attention in project planning, design and during construction and are discussed in greater detail in the following sections.

Existing, Undocumented Fill Piles

Existing undocumented fill piles were observed in several locations across the site. We do not possess any information regarding the source of the fill. Undocumented fill can present a greater than normal risk of post-construction movement of foundations, slabs, pavements and other site improvements supported on or above these materials. Consequently, it is our opinion the existing fill piles shall be removed from the site or if re-used, should be evaluated by Terracon prior to construction.

Shallow Groundwater

As previously stated, groundwater was measured at depths ranging from about 4.5 to 17.5 feet below existing site grades. In general, measured groundwater levels were shallowest on the east portion of the site in the vicinity of Boring Nos. 3, 7, 11 and 14. Terracon recommends maintaining a separation of at least 2 feet between the bottom of proposed below-grade foundations and measured groundwater levels. Final site grading should be planned and designed to avoid cuts where shallow groundwater is known to exist, and also in areas where such grading would create shallow groundwater conditions.

Preliminary site concepts indicate the utilities may extend below the observed groundwater levels. Thus, temporary dewatering may be needed to lower groundwater levels below temporary excavations. We recommend that on a long-term basis, groundwater levels be maintained at least 2 feet below the foundations.

As previously stated, on similar projects, we have installed monitoring wells early on in the development phases to monitor the groundwater seasonally to aid in design and planning for the elements of the project that are sensitive to groundwater depth. We recommend installing these monitoring wells for this project to gather more data regarding the groundwater level seasonally.

If a permanent or temporary dewatering system is judged necessary by the project team, we can provide additional recommendations, however an experienced dewatering contractor and designer familiar with the area should be consulted. We have not provided any specific dewatering recommendations relating to a geotechnical perspective at this time given the early stages of the development.

Expansive Soils

Expansive soils are present on this site at depths of approximately 8 feet and below. These soils are unlikely to experience a change in moisture due to site development given the depth encountered and presence of shallow groundwater. However, this report provides recommendations to help mitigate the effects of soil shrinkage and expansion. Even if these procedures are followed, some movement and cracking in the structures, pavements, and flatwork is possible. The severity of cracking and other damage such as uneven floor slabs and flat work will probably increase if modification of the site results in excessive wetting or drying of the expansive clays. Eliminating the risk of movement and cosmetic distress is generally not feasible, but it may be possible to further reduce the risk of movement if significantly more expensive measures are used during construction. It is imperative the recommendations described in section **Grading and Drainage** section of the **Earthwork** section of this report be followed to reduce potential movement.

Low Strength Soils

Loose granular soils were encountered at anticipated foundation bearing depths at this site. These materials present a risk for potential settlement of shallow foundations, floor slabs, pavements and other surficial improvements. These materials can also be susceptible to disturbance and loss of strength under repeated construction traffic loads and unstable conditions could develop.

Liquefaction Susceptibility

A final liquefaction analysis has been completed at this time. The Ground Motion Hazard Analysis and Site Response Analysis is provided under a separate cover. Additionally, we have included the report in **Supporting Information** at the back of this report.

Based on our review of the calculations, the anticipated potential total liquefaction-induced settlement across the site varies from about 1 to 1½ inches. We estimate the differential liquefaction-induced settlement may be up to ¾ of an inch over 50 feet. With regards to the potential for lateral spreading, we note that the site and surrounding area is relatively level. Given the relative flatness of the local topography and the variability in the layering of the soil lithology, it is our opinion that the potential for lateral spreading to affect this site is low.

Preliminary Foundation and Floor System Recommendations

Loose granular soils were encountered at anticipated shallow foundation bearing depths. Due to the variable relative density of the near surface soils within the proposed building areas, in our opinion the foundations for the buildings should be supported on a minimum 2 feet of engineered fill in order to provide uniform support for the structure. Given the shallow groundwater, the engineered fill may be substituted with a minimum of 2 sack cement grout slurry mix or soil-cement stabilization. Additional site preparation recommendations, including subgrade improvement and fill placement, are provided in the **Earthwork** section.

The **Shallow Foundations** section addresses support of the buildings bearing directly on a minimum of 2 feet of engineered fill, cement grout slurry (2 sack minimum), and/or soil-cement stabilization. The **Floor Slabs** section addresses slab-on-grade support of the building.

The **General Comments** section provides an understanding of the report limitations.

EARTHWORK

Earthwork is anticipated to include clearing and grubbing, excavations, and fill placement. The following sections provide recommendations for use in the preparation of specifications for the work. Recommendations include critical quality criteria, as necessary, to render the site in the state considered in our geotechnical engineering evaluation for foundations, floor slabs, and pavements.

Site Preparation

Prior to placing fill, any existing vegetation and root mat should be removed. Complete stripping of any topsoil should be performed in the proposed building and parking/driveway areas. The fill piles on site should be observed and tested before accepted for use as fill. The fill piles should be cleaned of any debris and/or deleterious material and stripped of any vegetation.

Underground facilities such as irrigation pipes may be encountered during construction. If underground facilities are encountered, such materials and features should be completely removed and the excavation thoroughly cleaned prior to backfill placement and/or construction.

Once cuts have been made and prior to placing any engineered fill, the subgrade should be proofrolled with an adequately loaded vehicle such as a fully-loaded tandem-axle dump truck or water truck. The proofrolling should be performed under the direction of the Geotechnical Engineer. Areas excessively deflecting under the proofroll should be delineated and subsequently addressed by the Geotechnical Engineer. Such areas should either be removed or moisture conditioned and recompacted. Such areas may also be modified by stabilizing with cement or aggregate base with geogrids.

The exposed subgrade soil should be scarified, moisture conditioned, and compacted. The depth of scarification of subgrade soils and moisture conditioning of the subgrade is highly dependent upon the time of year of construction and the site conditions that exist immediately prior to construction. If construction occurs during the winter or spring, when the subgrade soils are typically already in a moist condition, scarification and compaction may only be 12 inches. If construction occurs during the summer or fall when the subgrade soils have been allowed to dry out deeper, the depth of scarification and moisture conditioning may be as much as 18 inches. A representative of our office should be present to observe the exposed subgrade and specify the depth of scarification and moisture conditioning required subsequent to grading cuts and prior to placing fill.

Fill Material Types

All fill materials should be inorganic soils free of vegetation, debris, and fragments larger than three inches in size. Pea gravel or other similar non-cementitious, poorly-graded materials should not be used as fill or backfill without the prior approval of the geotechnical engineer.

Imported earth materials for use as engineered fill should be pre-approved by our representative prior to construction. Imported non-expansive soils may be used as fill material for the following:

- general site grading
- foundation areas
- slab-on-grade floor
- foundation backfill
- trench backfill
- exterior slabs-on-grade

- pavement subgrade

Soils for use as compacted engineered fill material within the proposed building pad area should conform to non-expansive materials as indicated in the following recommendations:

Percent Finer by Weight	
<u>Gradation</u>	<u>(ASTM C 136)</u>
3"	100
No. 4 Sieve	50 - 100
No. 200 Sieve	15 - 50
■ Liquid Limit	30 (max)
■ Plasticity Index	10 (max)
■ Maximum Expansive Index*	20 (max)

*ASTM D 4829

The on-site near surface silty sand should meet the specifications above, although the sandy silt/silt may not. However, due to the non-expansive nature of the silt, the near surface on-site soils are acceptable for use as engineered fill. The underlying lean to fat clays are not suitable for use as engineered fill and spoils from any trenching or utility construction shall not be placed in building, flatwork, and/or pavement areas. Engineered fill should be placed and compacted in horizontal lifts, using equipment and procedures that will produce recommended moisture contents and densities throughout the lift. Fill lifts should not exceed ten inches in loose thickness. The engineered fill should extend at least 5 feet beyond the perimeter of any foundations and extend under any adjacent flatwork.

The contractor shall notify the Geotechnical Engineer of import sources sufficiently ahead of their use so that the sources can be observed and approved as to the physical characteristic of the import material. For all import material, the contractor shall also submit current verified reports from a recognized analytical laboratory indicating that the import has a "not applicable" (Class S0) potential for sulfate attack based upon current ACI criteria and is only "mildly corrosive" to ferrous metal and copper. The reports shall be accompanied by a written statement from the contractor that the laboratory test results are representative of all import material that will be brought to the job.

Fill Compaction Requirements

Recommended compaction and moisture content criteria for engineered fill materials are as follows:

Material Type and Location	Per the Modified Proctor Test (ASTM D 1557)		
	Minimum Compaction Requirement (%)	Range of Moisture Contents for Compaction Above Optimum	
		Minimum	Maximum
<u>On-site sandy soils and Low volume change (non-expansive) imported fill:</u>			
Beneath foundations:	90	0%	+3%
Beneath slabs	90	0%	+3%
Miscellaneous backfill:	90	0%	+3%
Beneath pavement*:	95	0%	+3%
Utility Trenches*:	90	0%	+4%
Bottom of native soil excavation receiving fill:	90	+2%	+4%

*The upper 12 inches of subgrade soils beneath pavement should be compacted to 95% of the maximum dry density as determined in the ASTM D1557 test method.

We recommend that compacted native soil or any engineered fill be tested for moisture content and relative compaction during placement. Should the results of the in-place density tests indicate the specified moisture content or compaction requirements have not been met, the area represented by the test should be reworked and retested as required until the specified moisture content and relative compaction requirements are achieved.

Utility Trench Backfill

It is anticipated that the on-site near surface soils will provide suitable support for underground utilities and piping that may be installed. Any soft and/or unsuitable material encountered at the bottom of excavations should be removed and be replaced with an adequate bedding material. A non-expansive granular material with a sand equivalent greater than 30 should be used for bedding and shading of utilities, unless allowed or specified otherwise by the utility manufacturer.

Trench backfill should be mechanically placed and compacted as discussed earlier in this report. Compaction of initial lifts should be accomplished with hand-operated tampers or other lightweight compactors. Where trenches are placed beneath slabs or footings, the backfill should satisfy the gradation and expansion index requirements of engineered fill discussed in this report. Flooding or jetting for placement and compaction of backfill is not recommended.

Grading and Drainage

All grades must provide effective drainage away from the buildings during and after construction and should be maintained throughout the life of the structure. Water retained next to the building can result in soil movements greater than those discussed in this report. Greater movements can result in unacceptable differential floor slab and/or foundation movements, cracked slabs and

walls, and roof leaks. The roof should have gutters/drains with downspouts that discharge onto pavements or are tied to tight lines that discharge into the on-site storm drain system.

Exposed ground should be sloped and maintained at a minimum 5% away from the buildings for at least 10 feet beyond the perimeter of the building. Locally, flatter grades may be necessary to transition ADA access requirements for flatwork. After building construction and landscaping have been completed, final grades should be verified to document effective drainage has been achieved. Grades around the structure should also be periodically inspected and adjusted, as necessary, as part of the structure's maintenance program. Where paving or flatwork abuts the structures, a maintenance program should be established to effectively seal and maintain joints and prevent surface water infiltration.

Earthwork Construction Considerations

Shallow excavations for the proposed structures are anticipated to be accomplished with conventional construction equipment. Upon completion of filling and grading, care should be taken to maintain the subgrade water content prior to construction of floor slabs. Construction traffic over the completed subgrades should be avoided. The site should also be graded to prevent ponding of surface water on the prepared subgrades or in excavations. Water collecting over or adjacent to construction areas should be removed. If the subgrade desiccates, saturates, or is disturbed, the affected material should be removed, or the materials should be scarified, moisture conditioned, and recompacted prior to floor slab construction.

The groundwater table could affect overexcavation efforts, especially for over-excavation and replacement of lower strength soils. A temporary dewatering system consisting of sumps with pumps could be necessary to achieve the recommended depth of over-excavation. We have not provided any specific dewatering recommendations given the early stages of the development and the unknown building details. Therefore, the contractor shall plan their work accordingly and use an experienced dewatering contractor and designer familiar with the area.

Based on our experience in the area with similar projects, we have installed monitoring wells early on in the development phases to monitor the groundwater seasonally to aid in design and planning for the elements of the project that are sensitive to groundwater depth. We recommend installing these monitoring wells for this project to gather more data related to the seasonal groundwater depth.

As a minimum, excavations should be performed in accordance with OSHA 29 CFR, Part 1926, Subpart P, "Excavations" and its appendices, and in accordance with any applicable local, and/or state regulations.

Construction site safety is the sole responsibility of the contractor who controls the means, methods, and sequencing of construction operations. Under no circumstances shall the information provided herein be interpreted to mean Terracon is assuming responsibility for

construction site safety, or the contractor's activities; such responsibility shall neither be implied nor inferred.

Construction Observation and Testing

The earthwork efforts should be monitored under the direction of the Geotechnical Engineer. Monitoring should include documentation of adequate removal of vegetation and topsoil, proofrolling, and mitigation of areas delineated by the proofroll to require mitigation.

Each lift of compacted fill should be tested, evaluated, and reworked, as necessary, until approved by the Geotechnical Engineer prior to placement of additional lifts. Each lift of fill should be tested for density and water content at a frequency of at least one test for every 2,500 square feet of compacted fill in the building areas and 5,000 square feet in pavement areas. One density and water content test should be performed for every 12-inch thick lift for every 50 to 100 linear feet of compacted utility trench backfill.

In areas of foundation excavations, the bearing subgrade should be evaluated under the direction of the Geotechnical Engineer. If unanticipated conditions are encountered, the Geotechnical Engineer should prescribe mitigation options.

In addition to the documentation of the essential parameters necessary for construction, the continuation of the Geotechnical Engineer into the construction phase of the project provides the continuity to maintain the Geotechnical Engineer's evaluation of subsurface conditions, including assessing variations and associated design changes.

PRELIMINARY SHALLOW FOUNDATION RECOMMENDATIONS

If the site has been prepared in accordance with the requirements noted in **Earthwork**, the following design parameters are applicable for shallow foundations.

Design Parameters – Compressive Loads

Item	Description
Maximum Net Allowable Bearing pressure^{1, 2}	3,000 pounds per square foot
Required Bearing Stratum³	Minimum 24 inches of engineered fill, cement grout slurry (2 sack minimum), and/or soil-cement stabilization
Minimum Foundation Dimensions	Columns: 30 inches Continuous: 12 inches
Maximum Foundation Dimensions	Columns: 78 inches Continuous: 48 inches

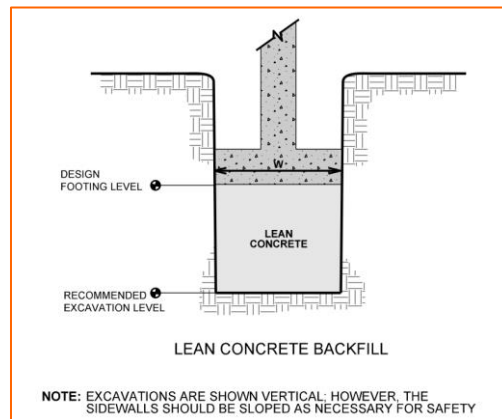

Item	Description
Ultimate Passive Resistance⁴ (equivalent fluid pressures)	350 pcf
Ultimate Coefficient of Sliding Friction⁵	0.35
Minimum Embedment below Finished Grade⁶	24 inches
Estimated Total Settlement from Structural Loads²	Less than about 1 inch
Estimated Differential Settlement^{2, 7}	About ½ of total settlement

3. The maximum net allowable bearing pressure is the pressure in excess of the minimum surrounding overburden pressure at the footing base elevation. An appropriate factor of safety has been applied. These bearing pressures can be increased by 1/3 for transient loads unless those loads have been factored to account for transient conditions. Values assume that exterior grades are relatively flat around the structure.
4. Values provided are for maximum loads noted in **Project Description**.
5. Unsuitable or soft soils should be over-excavated and replaced per the recommendations presented in the **Earthwork**.
6. Use of passive earth pressures require the sides of the excavation for the spread footing foundation to be nearly vertical and the concrete placed neat against these vertical faces or that the footing forms be removed and compacted structural fill be placed against the vertical footing face. If passive resistance is used to resist lateral loads, the base friction should be reduced by 25 percent.
7. Can be used to compute sliding resistance where foundations are placed on suitable soil/materials. Should be neglected for foundations subject to net uplift conditions.
8. Embedment necessary to minimize the effects of seasonal water content variations. Finished grade is defined as the lowest adjacent grade within five feet of the foundation for perimeter (exterior) footings.
9. Differential settlements are as measured over a span of 50 feet.

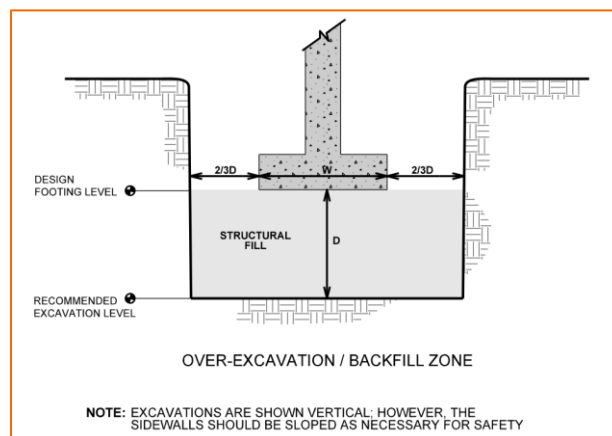

Foundation Construction Considerations

As noted in **Earthwork**, the footing excavations should be evaluated under the direction of the Geotechnical Engineer. The base of all foundation excavations should be free of water and loose soil, prior to placing concrete. Concrete should be placed soon after excavating to reduce bearing soil disturbance. Care should be taken to prevent wetting or drying of the bearing materials during construction. Excessively wet or dry material or any loose/disturbed material in the bottom of the footing excavations should be removed/reconditioned before foundation concrete is placed.

For required support of the shallow foundations (24 inches of engineered fill or cement grout slurry) and if unsuitable bearing soils are encountered at the base of the planned footing excavation, the excavation should be extended deeper to suitable soils, and the footings could bear directly on these soils at the lower level or on lean concrete backfill placed in the excavations. This is illustrated on the sketch below.

Over-excavation for structural fill placement below footings should be conducted as shown below. The over-excavation should be backfilled up to the footing base elevation, with engineered fill placed, as recommended in the **Earthwork** section.

To ensure foundations have adequate support, special care should be taken when footings are located adjacent to trenches. The bottom of such footings should be at least 1 foot below an imaginary plane with an inclination of 1.5 horizontal to 1.0 vertical extending upward from the nearest edge of the adjacent trench.

SEISMIC CONSIDERATIONS

A site-specific ground motion study was performed on this site. Seismic considerations can be found under a separate cover prepared by Terracon titled Report of Site-Specific Ground Motion Study and dated August 10, 2021. Additionally, we have included the report in **Supporting Information** at the back of this report.

LIQUEFACTION

The Ground Motion Hazard Analysis and Site Response Analysis has been completed. Parameters from the site-specific ground motion study were used to complete the liquefaction analysis.

Liquefaction is a mode of ground failure that results from the generation of high pore water pressures during earthquake ground shaking, causing loss of shear strength. Liquefaction is typically a hazard where loose sandy soils or low plasticity fine grained soils exist below groundwater. The California Geological Survey (CGS) has designated certain areas within California as potential liquefaction hazard zones. These are areas considered at a risk of liquefaction-related ground failure during a seismic event, based upon mapped surficial deposits and the presence of a relatively shallow water table. The project site is not located within a CGS liquefaction hazard zone. However, due to the relatively shallow depth to groundwater and the soil conditions encountered in our exploratory borings and CPT's, a cursory liquefaction analysis was performed to determine the liquefaction induced settlement at the site.

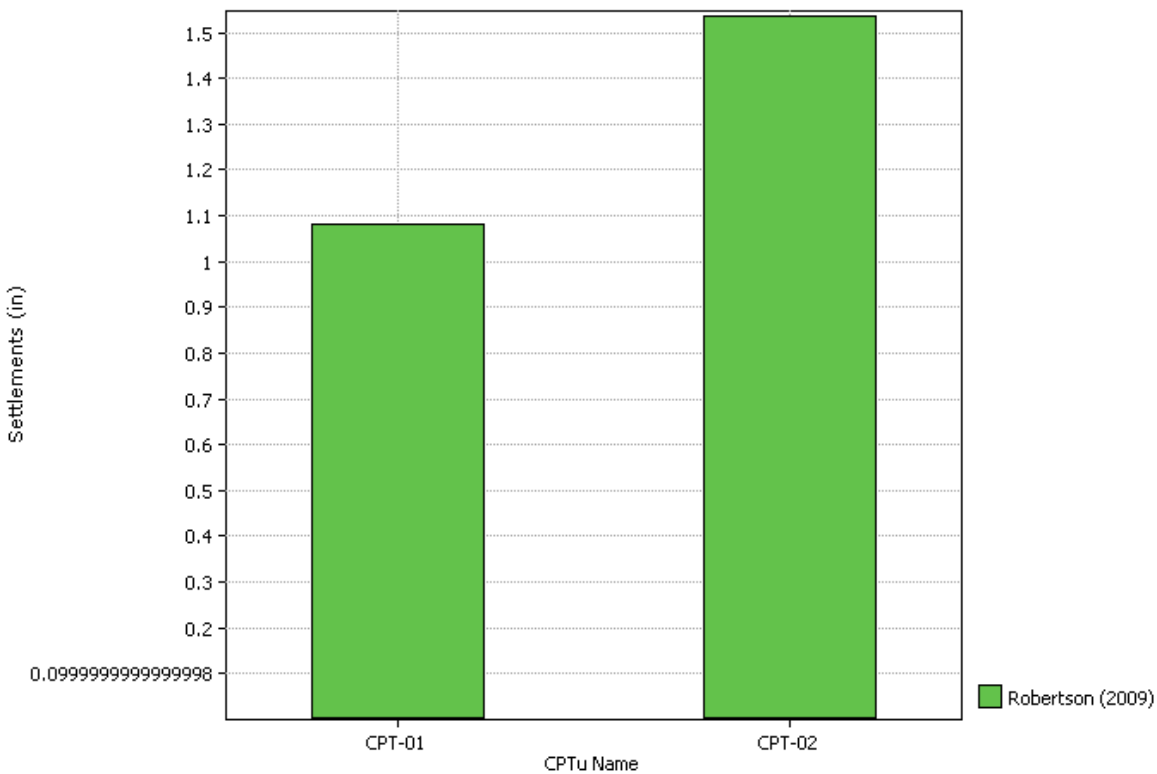

Our liquefaction hazard evaluation was performed in general compliance with the California Geological Survey (CGS) Special Publication 117A (2008) and the Southern California Earthquake Center "Recommended Procedures for Implementation of DMG Special Publication 117 Guidelines for Analyzing and Mitigating Liquefaction Hazards in California" 1999 report.

As recommended in the above reports, we performed a screening analysis to determine if there is a potential for liquefaction to occur at the site. We evaluated the soils encountered in our borings B1 through B17 advanced to a maximum depth of approximately 51½ feet below the existing ground surface (bgs) and two cone penetration tests (CPTs) which were advanced to a depth of 100 feet bgs. We evaluated these soils based on soil classification, corrected SPT blow counts, water content, Atterberg limits, groundwater elevation, shear strength, peak ground acceleration, and CPT data. In our screening investigation we looked at the Atterberg limits for fine-grained soils in our soil borings. The Atterberg limits for these fine-grained soils exhibited liquid limits ranging from 26 to 98 and plasticity indexes ranging from non-plastic to 67. We also calculated the ratio of the in-situ moisture content to the liquid limit. This data was then compared to the criteria by Idriss and Boulanger (2006) and Bray and Sancio (2006) for potential liquefaction or cyclic softening of fine-grained soils. Based on our screening analysis we believe the fine-grained soils at depths near and below groundwater generally have the potential for cyclic softening/liquefaction. As result of our screening and due to the presence of sand layers, we performed a quantitative evaluation of the potential for liquefaction to occur and the effects if liquefaction were to occur on this project.

A Peak Ground Acceleration (PGA) of 0.399 and a mean earthquake magnitude of 6.08 for the project site was used in our evaluation. Groundwater was encountered between the depths of

4½ and 13 feet bgs in our borings at the time they were performed. As a result, a groundwater depth of 5 feet was utilized in our evaluation.

A liquefaction analyses was performed in general accordance with California Geologic Survey Special Publication 117. The liquefaction study utilized the software “CLiq” by GeoLogismiki Geotechnical Software. These analyses were based on the soil data obtained from the two CPT soundings supplemented by laboratory data performed on samples obtained from our borings. Analyses were performed on data obtained from CPT1 and CPT2. CPT calculations were assessed using the Robertson (2009) method. A factor of safety of 1.3 was used against liquefaction. The liquefaction potential analyses were calculated from a depth of 5 to 50 feet bgs. A summary of the results of our analyses using the Robertson (2009) method has been attached to this report. The following table summarizes the vertical settlements calculated using the noted method.

Based on the analysis, various layers between the depths of approximately 5 to 42 feet are susceptible to liquefaction triggering based on a factor of safety of 1.3. However, the soil layers contributing to the majority of potential liquefaction settlement were encountered between the depths of 5 to 35 feet bgs. Based on our review of the calculations, the anticipated potential total liquefaction-induced settlement across the site varies from about 1 to 1½ inches. We estimate the differential liquefaction-induced settlement may be up to ¾ of an inch over 50 feet.

We believe the probability for liquefaction to manifest at the surface across the site is moderate due to the interbedded layering of the subgrade lithology, however if a dock level high building pad is constructed, the potential may be much lower. With regards to the potential for lateral spreading, we note that the site and surrounding area is relatively level. Given the relative flatness of the local topography and the variability in the layering of the soil lithology as well as the distance from the proposed building and a free face (such as the San Joaquin River located about ½ mile east of the site), it is our opinion that the potential for lateral spreading to affect this site is low.

FLOOR SLABS

Design parameters for floor slabs assume the requirements for **Earthwork** have been followed. Specific attention should be given to positive drainage away from the structure and positive drainage of the aggregate base beneath the floor slab.

Floor Slab Design Parameters

Item	Description
Floor Slab Support ¹	Retail building floor slabs and/or areas with floor coverings should be underlain by a minimum 4 inches of free-draining crushed aggregate ² The warehouse floor slab should be underlain by a minimum of 4 inches of Class 2 aggregate base compacted to a minimum of 95 percent relative compaction based on the ASTM D1557 test method. Additionally, all floor slabs should be supported on a minimum of 18 inches of scarified and recompacted non-expansive native soils and/or imported non-expansive engineered fill.
Estimated Modulus of Subgrade Reaction ³	200 pounds per square inch per inch (psi/in) for point loads

1. Floor slabs should be structurally independent of building footings or walls to reduce the possibility of floor slab cracking caused by differential movements between the slab and foundation. Keep this note if placing slab on expansive soil. If supporting slab on non-expansive fill or lime treated soil, remove this sentence.
2. Free-draining granular material should have less than 5% fines (material passing the No. 200 sieve). Other design considerations such as cold temperatures and condensation development could warrant more extensive design provisions.
3. Modulus of subgrade reaction is an estimated value based upon our experience with the subgrade condition, the requirements noted in **Earthwork**, and the floor slab support as noted in this table. It is provided for point loads. For large area loads the modulus of subgrade reaction would be lower.

The use of a vapor retarder should be considered beneath concrete slabs on grade covered with wood, tile, carpet, or other moisture sensitive or impervious coverings, or when the slab will support equipment sensitive to moisture. When conditions warrant the use of a vapor retarder, the slab designer should refer to ACI 302 and/or ACI 360 for procedures and cautions regarding

the use and placement of a vapor retarder. The vapor retarder should meet Class A ASTM E1745 standard.

Saw-cut control joints should be placed in the slab to help control the location and extent of cracking. For additional recommendations refer to the ACI Design Manual. Joints or cracks should be sealed with a water-proof, non-extruding compressible compound specifically recommended for heavy duty concrete pavement and wet environments.

Where floor slabs are tied to perimeter walls or turn-down slabs to meet structural or other construction objectives, our experience indicates differential movement between the walls and slabs will likely be observed in adjacent slab expansion joints or floor slab cracks beyond the length of the structural dowels. The Structural Engineer should account for potential differential settlement through use of sufficient control joints, appropriate reinforcing or other means.

Floor Slab Construction Considerations

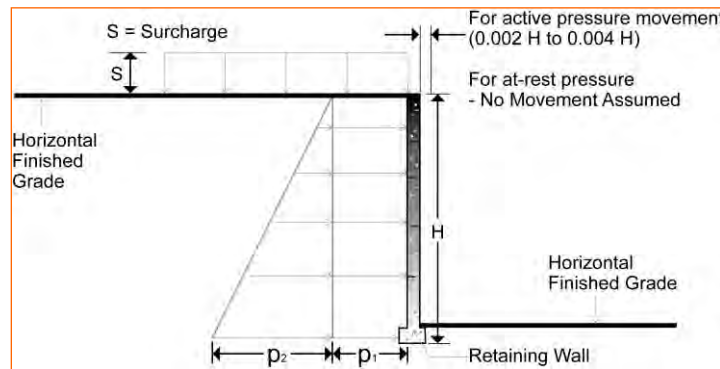

Finished subgrade, within and for at least 10 feet beyond the floor slab, should be protected from traffic, rutting, or other disturbance and maintained in a relatively moist condition until floor slabs are constructed. If the subgrade should become damaged or desiccated prior to construction of floor slabs, the affected material should be removed and structural fill should be added to replace the resulting excavation. Final conditioning of the finished subgrade should be performed immediately prior to placement of the floor slab support course.

The Geotechnical Engineer should approve the condition of the floor slab subgrades immediately prior to placement of the floor slab support course, reinforcing steel, and concrete. Attention should be paid to high traffic areas that were rutted and disturbed earlier, and to areas where backfilled trenches are located.

LATERAL EARTH PRESSURES

Design Parameters

Structures with unbalanced backfill levels on opposite sides should be designed for earth pressures at least equal to values indicated in the following table. Earth pressures will be influenced by structural design of the walls, conditions of wall restraint, methods of construction and/or compaction and the strength of the materials being restrained. Two wall restraint conditions are shown in the diagram below. Active earth pressure is commonly used for design of free-standing cantilever retaining walls and assumes wall movement. The "at-rest" condition assumes no wall movement and is commonly used for basement walls, loading dock walls, or other walls restrained at the top. The recommended design lateral earth pressures do not include a factor of safety and do not provide for possible hydrostatic pressure on the walls (unless stated).

Lateral Earth Pressure Design Parameters				
Earth Pressure Condition ¹	Coefficient for Backfill Type ²	Surcharge Pressure ^{3, 4, 5} p_1 (psf)	Effective Fluid Pressures (psf) ^{2, 4, 5}	
			Unsaturated ⁶	Submerged ⁶
Active (K_a)	Granular - 0.27	$(0.27)S$	$(30)H$	$(80)H$
At-Rest (K_o)	Granular - 0.43	$(0.43)S$	$(50)H$	$(90)H$
Passive (K_p)	Granular - 3.69	---	$(440)H$	$(275)H$

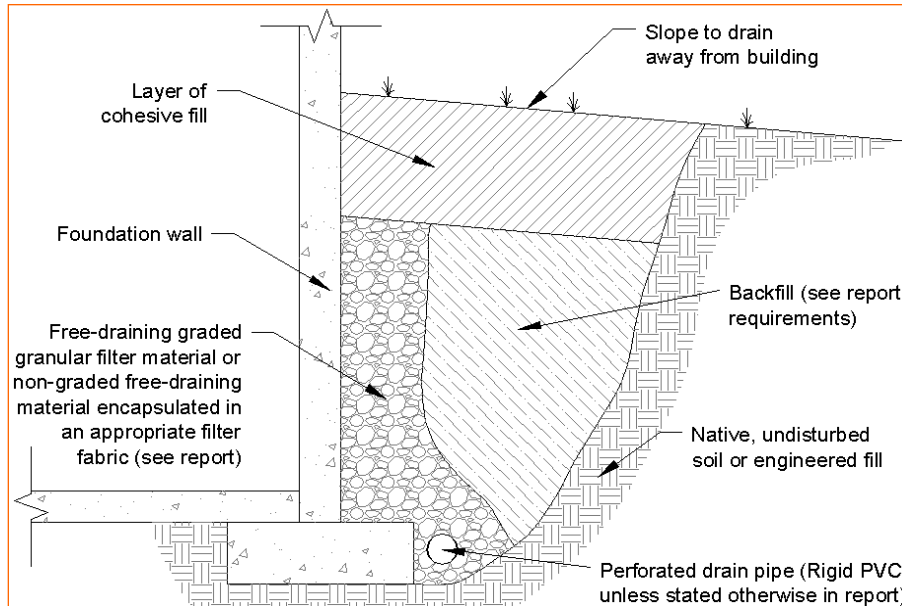

1. For active earth pressure, wall must rotate about base, with top lateral movements 0.002 H to 0.004 H, where H is wall height. For passive earth pressure, wall must move horizontally to mobilize resistance.
2. Uniform, horizontal backfill, compacted to at least 90% of the ASTM D1557 maximum dry density, rendering a maximum unit weight of 120 pcf.
3. Uniform surcharge, where S is surcharge pressure.
4. Loading from heavy compaction equipment is not included.
5. No safety factor is included in these values.
6. To achieve "Unsaturated" conditions, follow guidelines in **Subsurface Drainage for Below-Grade Walls** below. "Submerged" conditions are recommended when drainage behind walls is not incorporated into the design.

Backfill placed against structures should consist of granular soils. For the granular values to be valid, the granular backfill must extend out and up from the base of the wall at an angle of at least 45 and 60 degrees from vertical for the active and passive cases, respectively.

Subsurface Drainage for Below-Grade Walls

A perforated rigid plastic drain line installed behind the base of walls and extends below adjacent grade is recommended to prevent hydrostatic loading on the walls. The invert of a drain line around a below-grade building area or exterior retaining wall should be placed near foundation bearing level. The drain line should be sloped to provide positive gravity drainage to daylight or to a sump pit and pump. The drain line should be surrounded by clean, free-draining granular material having less than 5% passing the No. 200 sieve. The free-draining aggregate should be

encapsulated in a filter fabric. The granular fill should extend to within 2 feet of final grade, where it should be capped with compacted cohesive fill to reduce infiltration of surface water into the drain system.

As an alternative to free-draining granular fill, a pre-fabricated drainage structure may be used. A pre-fabricated drainage structure is a plastic drainage core or mesh which is covered with filter fabric to prevent soil intrusion and is fastened to the wall prior to placing backfill.

PRELIMINARY PAVEMENT RECOMMENDATIONS

General Pavement Comments

Pavement designs are provided for the traffic conditions and pavement life conditions as noted in **Project Description** and in the following sections of this report. A critical aspect of pavement performance is site preparation. Pavement designs noted in this section must be applied to the site which has been prepared as recommended in the **Earthwork** section.

Design of Asphaltic Concrete (AC) pavements are based on the procedures in the Caltrans Highway Design Manual, 2018 edition. Design of Portland Cement Concrete (PCC) pavements are based upon American Concrete Institute (ACI) 330R-01; Guide for Design and Construction of Concrete Parking Lots.

One sample of the near surface soils was obtained and classified at our laboratory by an engineer. The sample was tested to determine its Resistance Value (R-value). The location of the R-value sample is shown on the Exploration Plan. The test produced an R-value of 70. R-values for the

area typically are greater than 50. The Caltrans design method allows the use of a maximum R-value of 50 in design. Therefore, a design R-value of 50 was used for the AC and PCC pavement designs. We have provided pavement sections for traffic indices (TI) of 4.5 through 12.0. The project civil engineer provided a maximum traffic loading of 10 million ESAL's. Total ESAL's of 10 million correlates to a TI of 12.0. If additional pavement sections are required, we should be contacted to provide the additional recommendations. Only one R-value sample was taken. When the project design moves farther along we should be contacted to perform additional R-value tests to verify pavement subgrade conditions.

Preliminary Pavement Section Thicknesses

The following table provides options for AC and PCC Sections:

Asphaltic Concrete Design						
Layer	Thickness (inches)					
	TI=4.5	TI=5.5	TI=6.5	TI=8.0	TI=9.5	TI=12.0
AC ¹	2.5	3.0	4.0	5.0	6.0	8.0
Aggregate Base	4.0	4.0	4.0	5.0	7.0	10

1. All materials should meet the current Caltrans Standard Specifications, latest edition

Portland Cement Concrete Design						
Layer	Thickness (inches)					
	TI=4.5	TI=5.5	TI=6.5	TI=8.0	TI=9.5	TI=12.0
PCC ¹	5.0	5.0	5.0	6.5	7.0	7.5
Aggregate Base	4.0	4.0	4.0	4.0	4.0	4.0

1. All materials should meet the current Caltrans Standard Specifications, latest edition.

The estimated pavement sections provided in this report are minimums for the assumed design criteria, and as such, periodic maintenance should be expected. Areas for parking of heavy vehicles, concentrated turn areas, and start/stop maneuvers could require thicker pavement sections. Edge restraints (i.e. concrete curbs or aggregate shoulders) should be planned along curves and areas of maneuvering vehicles. A maintenance program including surface sealing, joint cleaning and sealing, and timely repair of cracks and deteriorated areas will increase the pavement's service life. As an option, thicker sections could be constructed to decrease future maintenance.

Concrete for rigid pavements should have a minimum 28-day compressive strength of 4,000 psi, a modulus of rupture of 500 psi, and be placed with a maximum slump of 4 inches. Although not required for structural support, a minimum 4-inch thick base course layer is recommended to help reduce potential for slab curl, shrinkage cracking, and subgrade pumping through joints. Proper joint spacing will also be required to prevent excessive slab curling and shrinkage cracking. Joints should be sealed to prevent entry of foreign material and dowelled where necessary for load transfer.

Where practical, we recommend early-entry cutting of crack-control joints in PCC pavements. Cutting of the concrete in its “green” state typically reduces the potential for micro-cracking of the pavements prior to the crack control joints being formed, compared to cutting the joints after the concrete has fully set. Micro-cracking of pavements may lead to crack formation in locations other than the sawed joints, and/or reduction of fatigue life of the pavement.

Pavement design methods are intended to provide structural sections with adequate thickness over a subgrade such that wheel loads are reduced to a level the subgrade can support.

Openings in pavements, such as decorative landscaped areas, are sources for water infiltration into surrounding pavement systems. Water can collect in the islands and migrate into the surrounding subgrade soils thereby degrading support of the pavement. This is especially applicable for islands with raised concrete curbs, irrigated foliage, and low permeability near-surface soils. The civil design for the pavements with these conditions should include features to restrict or to collect and discharge excess water from the islands. Examples of features are edge drains connected to the storm water collection system, longitudinal subdrains, or other suitable outlet and impermeable barriers preventing lateral migration of water such as a cutoff wall installed to a depth below the pavement structure.

Dishing in parking lots surfaced with AC is usually observed in frequently-used parking stalls (such as near the front of buildings) and occurs under the wheel footprint in these stalls. The use of higher-grade asphaltic cement, or surfacing these areas with PCC, should be considered. The dishing is exacerbated by factors such as irrigated islands or planter areas, sheet surface drainage to the front of structures.

Rigid PCC pavements will perform better than AC in areas where short-radii turning and braking are expected (i.e. entrance/exit aprons) due to better resistance to rutting and shoving. In addition, PCC pavement will perform better in areas subject to large or sustained loads. An adequate number of longitudinal and transverse control joints should be placed in the rigid pavement in accordance with ACI and/or AASHTO requirements. Expansion (isolation) joints must be full depth and should only be used to isolate fixed objects abutting or within the paved area.

PCC pavement details for joint spacing, joint reinforcement, and joint sealing should be prepared in accordance with American Concrete Institute (ACI 330R-01 and ACI 325R.9-91). PCC pavements should be provided with mechanically reinforced joints (doweled or keyed) in accordance with ACI 330R-01.

Pavement Drainage

Pavements should be sloped to provide rapid drainage of surface water. Water allowed to pond on or adjacent to the pavements could saturate the subgrade and contribute to premature pavement deterioration. In addition, the pavement subgrade should be graded to provide positive drainage within the granular base section. Appropriate sub-drainage or connection to a suitable daylight outlet should be provided to remove water from the granular subbase.

The pavement surfacing and adjacent sidewalks should be sloped to provide rapid drainage of surface water. Water should not be allowed to pond on or adjacent to slabs, since it could saturate the subgrade and contribute to premature pavement or slab deterioration.

Pavement Maintenance

The pavement sections represent minimum recommended thicknesses and, as such, periodic maintenance should be anticipated. Therefore, preventive maintenance should be planned and provided for through an on-going pavement management program. Maintenance activities are intended to slow the rate of pavement deterioration and to preserve the pavement investment. Maintenance consists of both localized maintenance (e.g. crack and joint sealing and patching) and global maintenance (e.g. surface sealing). Preventive maintenance is usually the priority when implementing a pavement maintenance program. Additional engineering observation is recommended to determine the type and extent of a cost-effective program. Even with periodic maintenance, some movements and related cracking may still occur and repairs may be required.

Pavement performance is affected by its surroundings. In addition to providing preventive maintenance, the civil engineer should consider the following recommendations in the design and layout of pavements:

1. Final grade adjacent to paved areas should slope down from the edges at a minimum 2%.
2. Subgrade and pavement surfaces should have a minimum 2% slope to promote proper surface drainage.
3. Install below pavement drainage systems surrounding areas anticipated for frequent wetting.
4. Install joint sealant and seal cracks immediately.
5. Seal all landscaped areas in or adjacent to pavements to reduce moisture migration to subgrade soils.
6. Place compacted, low permeability backfill against the exterior side of curb and gutter.

7. Place curb, gutter and/or sidewalk directly on subgrade soils rather than on unbound granular base course materials.

PERCOLATION AND INFILTRATION TESTS

Percolation Tests

Four percolation tests were performed in the likely locations of proposed stormwater retention basins and at the depths noted below as agreed to with The Hogdgon Group. The location of the tests are shown on the Exploration Plan.

The results of the percolation test are presented in the following table. The infiltration rates are also shown, as calculated by the Porchet Method (aka Inverse Borehole Method):

Test ID	Depth of test, ft.	Average head, ft.	Soil Type at Test Depth	Percolation Rate, inches per hour	Infiltration Rate, inches per hour
P1	4.5	2.7	Silty Sand	8.6	0.4
P2	4.5	2.9	Silty Sand	7.2	0.3
P3	5	2.6	Silty Sand	5.3	0.4
P4	4	2.5	Silty Sand	9.1	0.3

Our tests were performed using clean water; the storm water runoff will likely contain materials such as silt, leaves, oil residues, and other matter that may reduce the infiltration characteristics of the soils – we recommend that an appropriate safety factor be applied to the estimated percolation and infiltration rates for use in design. The safety factor should consider the level of filtration the system can provide. The percolation rates presented above are applicable at the locations and depths of the tests, if storm water facilities are installed at other locations/depths on the site, the rates may differ.

We provide the following considerations for the design, construction and maintenance of the storm water collection system. The long-term percolation and infiltration rates will depend on many factors, and can be reduced if the following conditions are present/not incorporated:

- Variability of site soils.
- Fine layering of soils
- Construction practices result in a compacted basin bottom
- Pre-treatment (filtration) of the influent is not provided, and/or
- Maintenance of the systems is not performed regularly.

Subsurface Soil Variations: Variations in subsurface soil conditions and the presence of fine layering that may not have been detected in the exploration program can affect the percolation rate of the receptor soils.

Construction Considerations: Operation of heavy equipment during construction may densify the receptor soils in the bottom of the storm drain system or the bio-swales. The soils exposed in the bottom of the systems should not be compacted and should remain in their native condition and/or should be scarified and protected from compaction.

Maintenance of Facilities: The percolation and infiltration rates of the receptor soils will be reduced in the event that fine sediment, organic materials, and/or oil residue are allowed to settle in basin or bio-swale areas. The use of a filtration system as well as a maintenance program is highly recommended. All intakes should be cleaned regularly following significant rains and prior to the beginning of the rainy season. Satisfactory long-term performance of the bottom of the system will require some degree of maintenance, as possible.

CORROSIVITY

The table below lists the results of laboratory soluble sulfate, soluble chloride, electrical resistivity, and pH testing. The values may be used to estimate potential corrosive characteristics of the on-site soils with respect to contact with the various underground materials which will be used for project construction.

Corrosivity Test Results Summary						
Boring	Sample Depth (feet)	Soil Description	Soluble Sulfate (%)	Soluble Chloride (%)	Electrical Resistivity (Ω-cm)	pH
B1	1.0 – 2.5	Silty Sand	0.01	<0.01	6,645	8.28
B17	1.0 – 2.5	Silty Sand	<0.01	<0.01	3,492	8.59

The sulfate test results indicate that the soil from borings B1 and B17 classify as Class S0 according to Table 19.3.1.1 of ACI 318-14. This indicates that the sulfate level is negligible when considering corrosion to concrete. Based on the results of the sulfate content test results, ACI 318-14, Section 19.3 does not specify the type of cement or a maximum water-cement ratio for concrete for sulfate Class S0. For further information, see ACI 318-14, Section 19.3.

GENERAL COMMENTS

Our analysis and opinions are based upon our understanding of the project, the geotechnical conditions in the area, and the data obtained from our site exploration. Natural variations will occur between exploration point locations or due to the modifying effects of construction or weather. The nature and extent of such variations may not become evident until during or after construction. Due to the wide spacing of our borings, the recommendations in the report shall be considered preliminary. Terracon should be contacted to provide a more detailed exploration and analysis to verify the subsurface conditions are consistent with the preliminary recommendations as the project moves forward and site plans are finalized. Additionally, Terracon should be retained as the Geotechnical Engineer, where noted in this report, to provide observation and testing services during pertinent construction phases. If variations appear, we can provide further evaluation and supplemental recommendations. If variations are noted in the absence of our observation and testing services on-site, we should be immediately notified so that we can provide evaluation and supplemental recommendations.

Our Scope of Services does not include either specifically or by implication any environmental or biological (e.g., mold, fungi, bacteria) assessment of the site or identification or prevention of pollutants, hazardous materials or conditions. If the owner is concerned about the potential for such contamination or pollution, other studies should be undertaken.

Our services and any correspondence or collaboration through this system are intended for the sole benefit and exclusive use of our client for specific application to the project discussed and are accomplished in accordance with generally accepted geotechnical engineering practices with no third-party beneficiaries intended. Any third-party access to services or correspondence is solely for information purposes to support the services provided by Terracon to our client. Reliance upon the services and any work product is limited to our client and is not intended for third parties. Any use or reliance of the provided information by third parties is done solely at their own risk. No warranties, either express or implied, are intended or made.

Site characteristics as provided are for design purposes and not to estimate excavation cost. Any use of our report in that regard is done at the sole risk of the excavating cost estimator as there may be variations on the site that are not apparent in the data that could significantly impact excavation cost. Any parties charged with estimating excavation costs should seek their own site characterization for specific purposes to obtain the specific level of detail necessary for costing. Site safety, and cost estimating including, excavation support, and dewatering requirements/design are the responsibility of others. If changes in the nature, design, or location of the project are planned, our conclusions and recommendations shall not be considered valid unless we review the changes and either verify or modify our conclusions in writing.

1. Below ground surface.

Boring Layout and Elevations: Unless otherwise noted, Terracon personnel provided the boring layout. Coordinates were obtained with a handheld GPS unit (estimated horizontal accuracy of about ±10 feet) and approximate elevations were obtained utilizing Google Earth. If elevations and a more precise boring layout are desired, we recommend borings be surveyed.

Subsurface Exploration Procedures: We advanced the borings with a track-mounted rotary drill rig using solid-stem augers, hollow-stem flight augers and mud-rotary drilling methods. We obtained samples at depths of 1 foot, 2.5 feet, 5 feet and at intervals of 5 feet thereafter. In the split-barrel sampling procedure, a standard 2-inch outer diameter split-barrel sampling spoon was driven into the ground by a 140-pound automatic hammer falling a distance of 30 inches. The number of blows required to advance the sampling spoon the last 12 inches of a normal 18-inch penetration is recorded as the Standard Penetration Test (SPT) resistance value. The SPT resistance values, also referred to as N-values, are indicated on the boring logs at the test depths. A 2.5-inch O.D. split-barrel Modified California sampling spoon with 2.0-inch I.D. tube lined sampler was used for sampling. Tube-lined, split-barrel sampling procedures are similar to standard split spoon sampling procedure; however, blow counts are not equivalent to the SPT blow counts. The values provided on our boring logs are uncorrected. We observed and recorded groundwater levels during drilling and sampling. As required by the County, all borings were backfilled with neat cement-grout after their completion.

For the cone penetrometer testing, the CPT rig hydraulically pushes an instrumented cone through the soil while nearly continuous readings are recorded to a portable computer. The cone is equipped with electronic load cells to measure tip resistance and sleeve resistance and a pressure transducer to measure the generated ambient pore pressure. The face of the cone has

an apex angle of 60° and an area of 15 cm². Digital Data representing the tip resistance, friction resistance, pore water pressure, and probe inclination angle are recorded about every 2 centimeters while advancing through the ground at a rate between 1½ and 2½ centimeters per second. These measurements are correlated to various soil properties used for geotechnical design. No soil samples are gathered through this subsurface investigation technique. CPT testing was conducted in general accordance with ASTM D5778 “Standard Test Method for Performing Electronic Friction Cone and Piezocone Penetration Testing of Soils.”

The sampling depths, penetration distances, and other sampling information was recorded on the field boring logs. The samples were placed in appropriate containers and taken to our soil laboratory for testing and classification by a Geotechnical Engineer. Our exploration team prepared field boring logs as part of the drilling operations. These field logs included visual classifications of the materials encountered during drilling and our interpretation of the subsurface conditions between samples. Final boring logs were prepared from the field logs. The final boring logs represent the Geotechnical Engineer's interpretation of the field logs and include modifications based on observations and tests of the samples in our laboratory.

Percolation Testing: As requested, four percolation tests were performed on the project site. These tests were performed at depths of about 4 to 5 feet below the existing ground surface. The tests were performed by drilling the test holes and then placing about 2 inches of gravel in the bottom of the holes. The holes were then cased with PVC pipe and gravel was placed around the outside of the pipe. Water was added to the holes and allowed to soak overnight. The tests were performed by adding water to the holes to provide for about 1.5 to 4.5 feet of head. Readings of the drop in water surface elevation were made at approximately 15 minute intervals over a period of about 2 hours.

Laboratory Testing

The project engineer reviewed the field data and assigned laboratory tests to understand the engineering properties of the various soil strata, as necessary, for this project. Procedural standards noted below are for reference to methodology in general. In some cases, variations to methods were applied because of local practice or professional judgment. Standards noted below include reference to other, related standards. Such references are not necessarily applicable to describe the specific test performed.

- ASTM D2216 Standard Test Methods for Laboratory Determination of Water (Moisture) Content of Soil and Rock by Mass
- ASTM D4318 Standard Test Methods for Liquid Limit, Plastic Limit, and Plasticity Index of Soils
- ASTM D422 Standard Test Method for Particle-Size Analysis of Soils
- ASTM D1140 Standard Test Method for Determining the Amount of Material Finer than No. 200 Sieve by Soil Washing

- ASTM D2844 Standard Test Method for Resistance Value R-Value and Expansion Pressure of Compacted Soils
- Corrosivity

The laboratory testing program included examination of soil samples by an engineer. Based on the material's texture and plasticity, we described and classified the soil samples in accordance with the Unified Soil Classification System.

LIQUEFACTION ANALYSIS REPORT

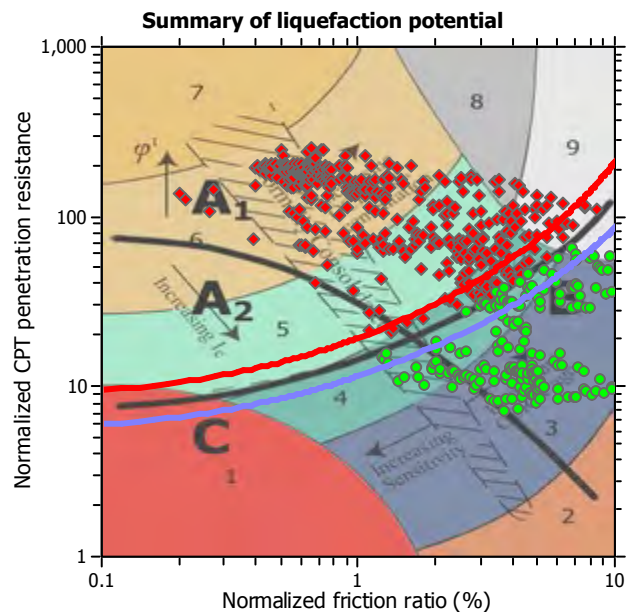

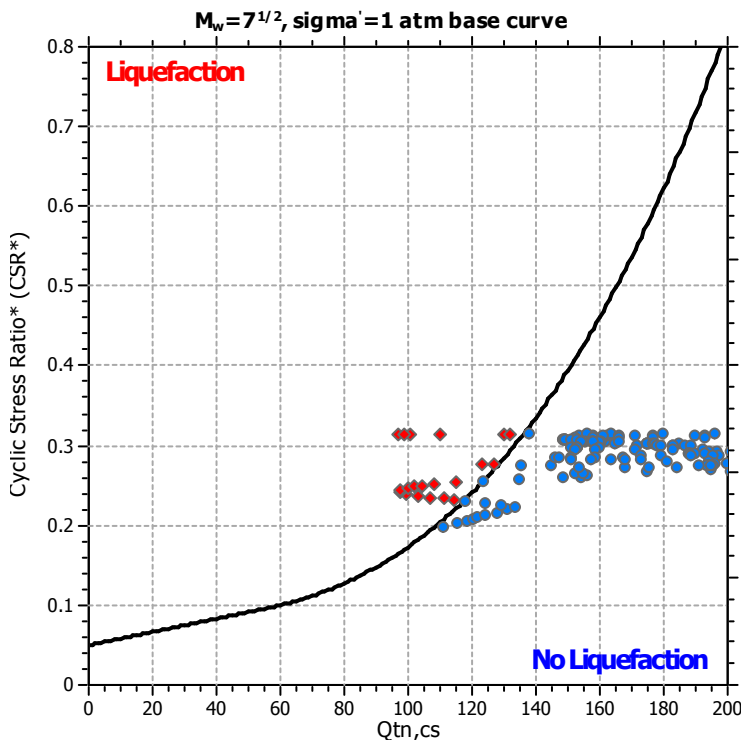

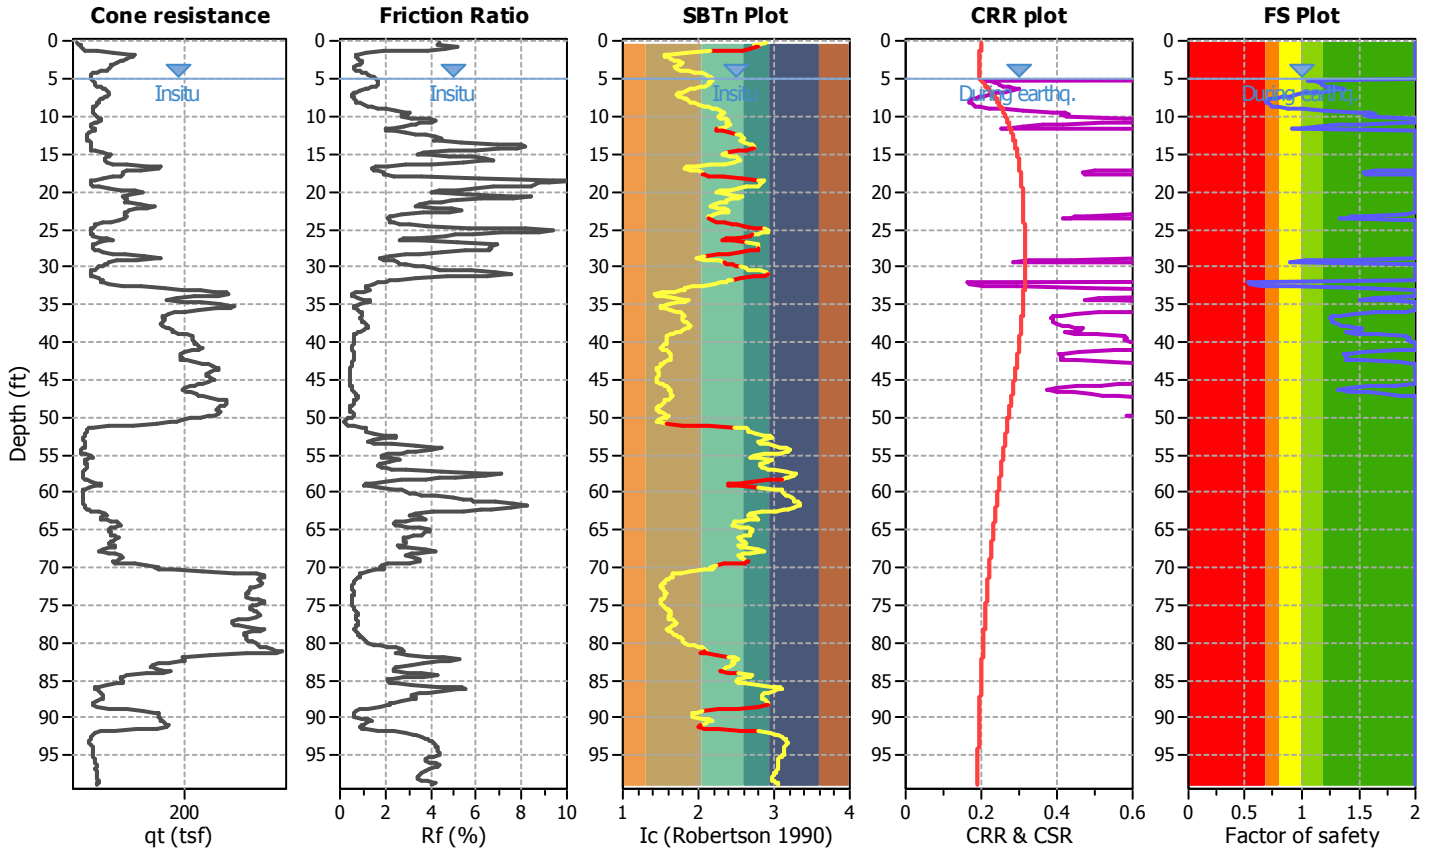

Project title : Dos Reis Ranch

Location : Lathrop, CA

CPT file : CPT-01

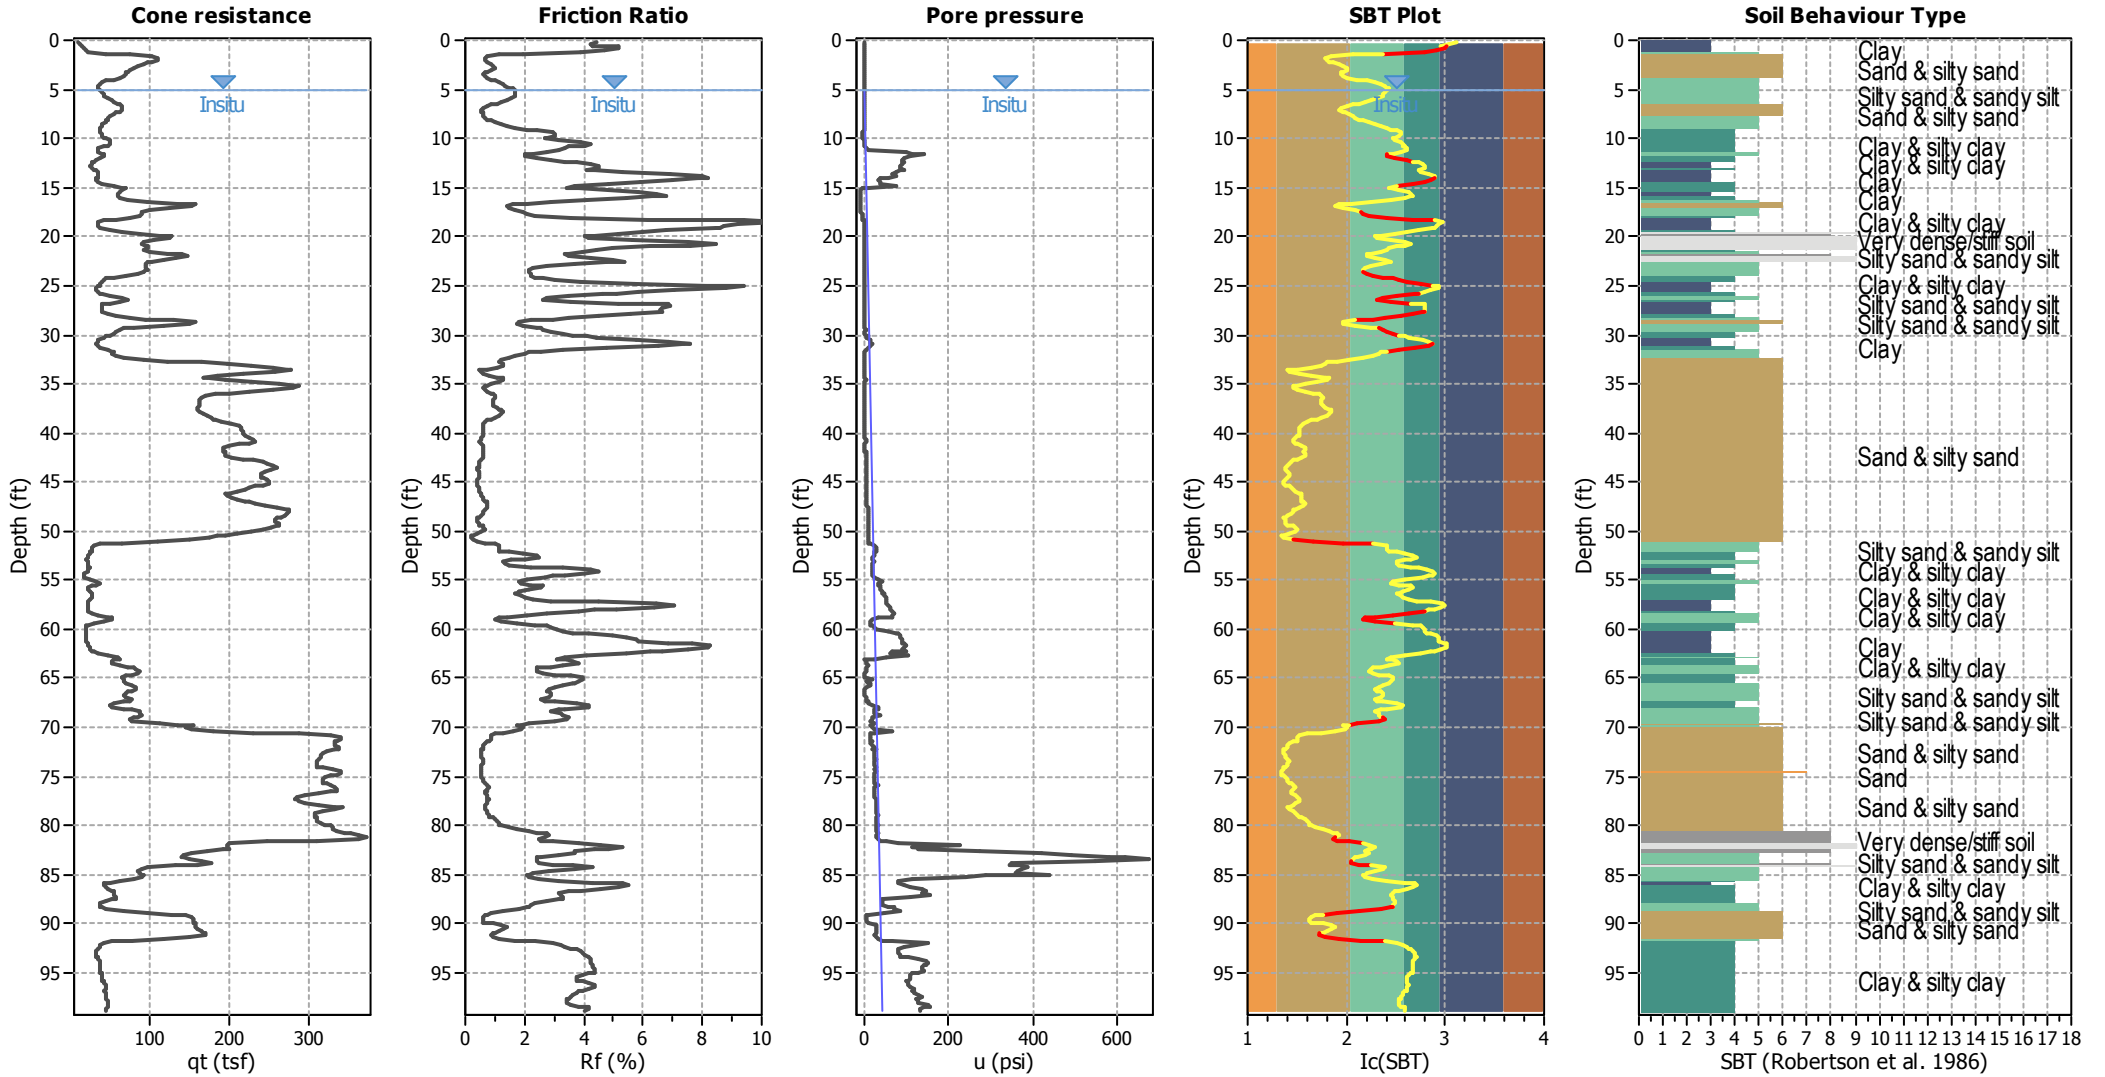

Input parameters and analysis data

Analysis method:	Robertson (2009)	G.W.T. (in-situ):	5.00 ft	Use fill:	No	Clay like behavior applied:	All soils
Fines correction method:	Robertson (2009)	G.W.T. (earthq.):	5.00 ft	Fill height:	N/A	Limit depth applied:	Yes
Points to test:	Based on Ic value	Average results interval:	3	Fill weight:	N/A	Limit depth:	50.00 ft
Earthquake magnitude M_w :	6.08	Ic cut-off value:	2.60	Trans. detect. applied:	Yes	MSF method:	Method based
Peak ground acceleration:	0.40	Unit weight calculation:	Based on SBT	K_0 applied:	No		

Zone A₁: Cyclic liquefaction likely depending on friction and duration of cyclic loading
 Zone A₂: Cyclic liquefaction and strength loss likely depending on loading and ground geometry
 Zone B: Liquefaction and post-earthquake strength loss unlikely, check cyclic softening
 Zone C: Cyclic liquefaction and strength loss possible depending on soil plasticity, brittleness/sensitivity, strain to peak undrained strength and ground geometry

DESCRIPTIVE SOIL CLASSIFICATION

Soil classification as noted on the soil boring logs is based Unified Soil Classification System. Where sufficient laboratory data exist to classify the soils consistent with ASTM D2487 "Classification of Soils for Engineering Purposes" this procedure is used. ASTM D2488 "Description and Identification of Soils (Visual-Manual Procedure)" is also used to classify the soils, particularly where insufficient laboratory data exist to classify the soils in accordance with ASTM D2487. In addition to USCS classification, coarse grained soils are classified on the basis of their in-place relative density, and fine-grained soils are classified on the basis of their consistency. See "Strength Terms" table below for details. The ASTM standards noted above are for reference to methodology in general. In some cases, variations to methods are applied as a result of local practice or professional judgment.

LOCATION AND ELEVATION NOTES

Exploration point locations as shown on the Exploration Plan and as noted on the soil boring logs in the form of Latitude and Longitude are approximate. See [Exploration and Testing Procedures](#) in the report for the methods used to locate the exploration points for this project. Surface elevation data annotated with +/- indicates that no actual topographical survey was conducted to confirm the surface elevation. Instead, the surface elevation was approximately determined from topographic maps of the area.

STRENGTH TERMS

RELATIVE DENSITY OF COARSE-GRAINED SOILS (More than 50% retained on No. 200 sieve.) Density determined by Standard Penetration Resistance			CONSISTENCY OF FINE-GRAINED SOILS (50% or more passing the No. 200 sieve.) Consistency determined by laboratory shear strength testing, field visual-manual procedures or standard penetration resistance

Criteria for Assigning Group Symbols and Group Names Using Laboratory Tests ^A				Soil Classification		
				Group Symbol	Group Name ^B	
Coarse-Grained Soils: More than 50% retained on No. 200 sieve	Gravels: More than 50% of coarse fraction retained on No. 4 sieve	Clean Gravels: Less than 5% fines ^C	$Cu \geq 4$ and $1 \leq Cc \leq 3$ ^E	GW	Well-graded gravel ^F	
			$Cu < 4$ and/or [$Cc < 1$ or $Cc > 3.0$] ^E	GP	Poorly graded gravel ^F	
		Gravels with Fines: More than 12% fines ^C	Fines classify as ML or MH	GM	Silty gravel ^{F, G, H}	
			Fines classify as CL or CH	GC	Clayey gravel ^{F, G, H}	
	Sands: 50% or more of coarse fraction passes No. 4 sieve	Clean Sands: Less than 5% fines ^D	$Cu \geq 6$ and $1 \leq Cc \leq 3$ ^E	SW	Well-graded sand ^I	
			$Cu < 6$ and/or [$Cc < 1$ or $Cc > 3.0$] ^E	SP	Poorly graded sand ^I	
		Sands with Fines: More than 12% fines ^D	Fines classify as ML or MH	SM	Silty sand ^{G, H, I}	
			Fines classify as CL or CH	SC	Clayey sand ^{G, H, I}	
Fine-Grained Soils: 50% or more passes the No. 200 sieve	Silts and Clays: Liquid limit less than 50	Inorganic:	$PI > 7$ and plots on or above "A"	CL	Lean clay ^{K, L, M}	
			$PI < 4$ or plots below "A" line ^J	ML	Silt ^{K, L, M}	
		Organic:	Liquid limit - oven dried	< 0.75	OL	Organic clay ^{K, L, M, N}
			Liquid limit - not dried			Organic silt ^{K, L, M, O}
	Silts and Clays: Liquid limit 50 or more	Inorganic:	PI plots on or above "A" line	CH	Fat clay ^{K, L, M}	
			PI plots below "A" line	MH	Elastic Silt ^{K, L, M}	
		Organic:	Liquid limit - oven dried	< 0.75	OH	Organic clay ^{K, L, M, P}
			Liquid limit - not dried			Organic silt ^{K, L, M, Q}
Highly organic soils:	Primarily organic matter, dark in color, and organic odor			PT	Peat	

^A Based on the material passing the 3-inch (75-mm) sieve.

^B If field sample contained cobbles or boulders, or both, add "with cobbles or boulders, or both" to group name.

^C Gravels with 5 to 12% fines require dual symbols: GW-GM well-graded gravel with silt, GW-GC well-graded gravel with clay, GP-GM poorly graded gravel with silt, GP-GC poorly graded gravel with clay.

^D Sands with 5 to 12% fines require dual symbols: SW-SM well-graded sand with silt, SW-SC well-graded sand with clay, SP-SM poorly graded sand with silt, SP-SC poorly graded sand with clay.

^E $Cu = D_{60}/D_{10}$ $Cc = \frac{(D_{30})^2}{D_{10} \times D_{60}}$

^F If soil contains $\geq 15\%$ sand, add "with sand" to group name.

^G If fines classify as CL-ML, use dual symbol GC-GM, or SC-SM.

^H If fines are organic, add "with organic fines" to group name.

^I If soil contains $\geq 15\%$ gravel, add "with gravel" to group name.

^J If Atterberg limits plot in shaded area, soil is a CL-ML, silty clay.

^K If soil contains 15 to 29% plus No. 200, add "with sand" or "with gravel," whichever is predominant.

^L If soil contains $\geq 30\%$ plus No. 200 predominantly sand, add "sandy" to group name.

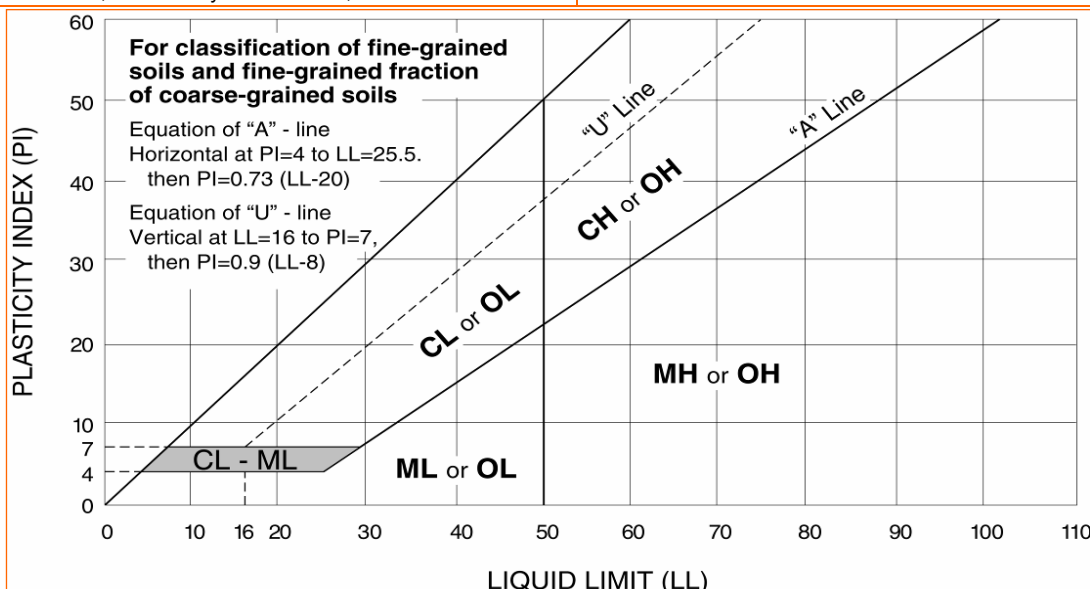

^M If soil contains $\geq 30\%$ plus No. 200, predominantly gravel, add "gravelly" to group name.

^N $PI \geq 4$ and plots on or above "A" line.

^O $PI < 4$ or plots below "A" line.

^P PI plots on or above "A" line.

^Q PI plots below "A" line.

Re: Report of Site-Specific Ground Motion Study
Dos Reis Ranch
Lathrop, California
Terracon Project No. 81215116

Dear Mr. Asmus:

Terracon Consultants, Inc. (Terracon) has completed the site-specific ground motion study for the above-referenced project. Our geotechnical engineering report (Draft submitted June 25, 2021, finalized August 16, 2021) describes the site and project and provides recommendations for earthwork, foundations, and other components of the project. The ground motion study services were performed in general accordance with our Agreement for Services dated May 7, 2021.

TECTONIC SETTING AND EARTHQUAKE SOURCES

Lathrop (latitude 37.83119 and longitude -121.29245) is within the Great Valley geomorphic province, an alluvial plain extending through the central part of California. The plain is formed above a structural trough that is filled with a thick sequence of sediments deposited from the bordering highlands including the Coast Ranges and Sierra Nevada. The San Joaquin River drains the southern portion of the Great Valley and is located approximately 1 mile west of the site. Project explorations indicate that the site is underlain by fluvial (river) sediments that include interlayered silts, sands, and clays of variable density/stiffness.

The site is not located in a State-designated Alquist-Priolo earthquake fault zone; therefore, the potential for surface rupture due to faulting at the site is low. The following table summarizes historical seismicity in the site region.

Event	Year	Magnitude	Distance to Site (km)	Direction
SF Peninsula	1838	7	97	SW
San Jose	1865	6.5	89	SW
Hayward	1868	7	75	W
Mare Island	1898	6.5	103	NW

San Francisco	1906	7.9	110	W
Calaveras fault	1911	6.5	78	SW
Loma Prieta	1989	6.9	103	SW

A scenario earthquake model for the Great Valley 7 fault (Orestimba fault) with a magnitude of 6.9 and epicenter approximately 30 kilometers southwest of the site yields a PGA value of 0.23g for the site (USGS Earthquake Hazards Program, 2017).

Faults in the site region include the San Joaquin/Orestimba fault (element 7 of the Great Valley Fault System as modeled by USGS), the Greenville Fault, and the Mount Diablo Thrust located approximately 23 kilometers southwest, 36 kilometers southwest, and 43 kilometers west of the site, respectively. More distant fault sources include the Calaveras fault, the Hayward fault and the Peninsula section of the San Andreas fault zone located approximately 58 kilometers southwest, 65 kilometers west-southwest and 95 kilometers west of the site, respectively. According to deaggregation of the USGS seismic hazard model, seismic shaking hazard at the site for PGA is dominated by the Greenville and San Joaquin/Orestimba sources at magnitudes of 6.9 and 7.0, respectively. The long period hazard – as determined from deaggregation of the hazard at the 1-second site period - is dominated by the Greenville, San Andreas, and Calaveras fault sources. Significant hazard is contributed by non-fault, gridded/background sources in the USGS model.

FIELD SHEAR WAVE VELOCITY TESTING AND SITE CLASS

Collected data from Seismic Cone Penetration Tests (sCPT), performed by Terracon and presented in the geotechnical engineering report, were used to compute the time-averaged shear wave velocity for the upper 100 feet (30 meters) of the soil profile ($V_{S,100}$). $V_{S,100}$ was 955 feet/second for sCPT-01 and 888 feet/second for sCPT-02. The $V_{S,100}$ value indicated a NEHRP Site Class D for seismic design per Table 20.3-1 of ASCE 7-16. However, because of the soil liquefaction hazard discussed in the geotechnical engineering report, the Site Class is F.

APPLICABLE CODES AND STANDARDS

In general, the basis of design is the 2019 California Building Code which uses the 2018 International Building Code (2018 IBC) as a model. The 2018 IBC states that structures shall be designed and constructed to resist the effects of earthquake motions in accordance with ASCE 7-16. Per ASCE 7-16, the design earthquake ground motions are two-thirds of the risk-targeted Maximum Considered Earthquake (MCE_R) which is defined as a 1 percent chance of structure collapse in 50 years.

SITE-SPECIFIC GROUND MOTION STUDY

The site-specific ground motion study in this report included both a ground motion hazard analysis and a site response analysis. The procedures outlined in ASCE 7-16 Chapters 11, 20 and 21 were utilized in part for preparation of site-specific spectra for the proposed project.

Base Ground Motions

Selection and scaling of ground motions to be used as input for site response analysis requires target values of spectral acceleration (S_a) across a range of structural periods (T) referred to as a target spectrum. The base condition was modelled using $V_{s,30} = 550$ meters/second ($V_{s,100} = 1,800$ feet/second) to generate the target spectrum. Values of $Z_{1.0}$ and $Z_{2.5}$ were selected as 0.4 kilometer and 1.4 kilometers, respectively, based on CGS Map Sheet 48 (2016) and the correlation provided by Next Generation West 2 (NGA-West 2) default basin depths.

The MCE_R spectrum was developed as a probabilistic spectrum using values obtained with the USGS Unified Hazard Tool (<https://earthquake.usgs.gov/hazards/interactive/>) web-based software application consistent with the NGA-West 2 attenuation relations (GMMs). The equally-weighted spectral values from the attenuation relations of Abrahamson and others (ASK 2014), Boore and others (BSSA 2014), Campbell and Borzognia (CB 2014) and Chiou and Youngs (CY 2014) were used for the probabilistic spectrum. The values so obtained were scaled from geomean to maximum rotated values using the factors of Shahi and Baker (2014). The probabilistic MCE spectrum was converted to a risk-targeted spectrum (MCE_R) using the risk coefficients $C_{RS} = 0.946$ and $C_{R1} = 0.951$.

The USGS seismic model considers seismic sources including known faults and background seismicity consistent with the 2014 US National Seismic Hazard maps. Gridded seismic sources are included in the probabilistic model.

ASCE 7-16 Supplement No. 1 states that the deterministic ground motion response spectrum need not be calculated when the largest spectral response acceleration of the probabilistic ground motion response spectrum of Section 21.2.2 is less than $1.2 \times F_a$. For this site, the largest probabilistic amplitude value is less than $1.2 \times F_a$; therefore, the deterministic spectrum is not included for evaluation of this site.

Selection and Scaling of Earthquake Records

The MCE_R spectral acceleration values at the base of our soil model (i.e., $V_{s,100} = 1,800$ feet/second) were used as a target spectrum for selecting and scaling time histories of acceleration. The time histories served as input motions to our site response analysis. Deaggregation of the probabilistic seismic hazard analysis allowed us to define our search criteria for the time histories. The recorded motions were obtained from the Pacific Earthquake

Engineering Research (PEER) Center. We selected recordings from a database of strike-slip fault mechanisms with a moment magnitude range of 6 to 8 and a source-to-site distance range of 5 to 50 km. Characteristics of the recorded accelerograms, referred to as seed motions, and their scale factors are listed in Table 1.

Table 1. Characteristics of Selected Time Histories

Earthquake	Moment Magnitude	Station	Distance (km)	Component	Scale Factor
1940 Imperial Valley, California	7.0	El Centro Array #9	6	180	1.4
1952 Kern County, California	7.4	Taft Lincoln School	39	021	2.5
1954 Northern California, California	6.5	Ferndale City Hall	27	044	2.7
1966 Parkfield, California	6.2	Temblor pre-1969	16	205	1.5
1971 San Fernando, California	6.6	Lake Hughes #12	19	021	1.7

The selected recordings for the sources provided the minimum mean squared error after scaling relative to the target spectrum within the period range of 0.07 and 0.75 seconds. We based this range on the fundamental period of vibration ($0.34 < T < 0.5$ seconds) provided by the structural engineer. Figure 1 compares the MCE_R target spectrum to computed spectra from the scaled time histories and the average of the scaled time histories.

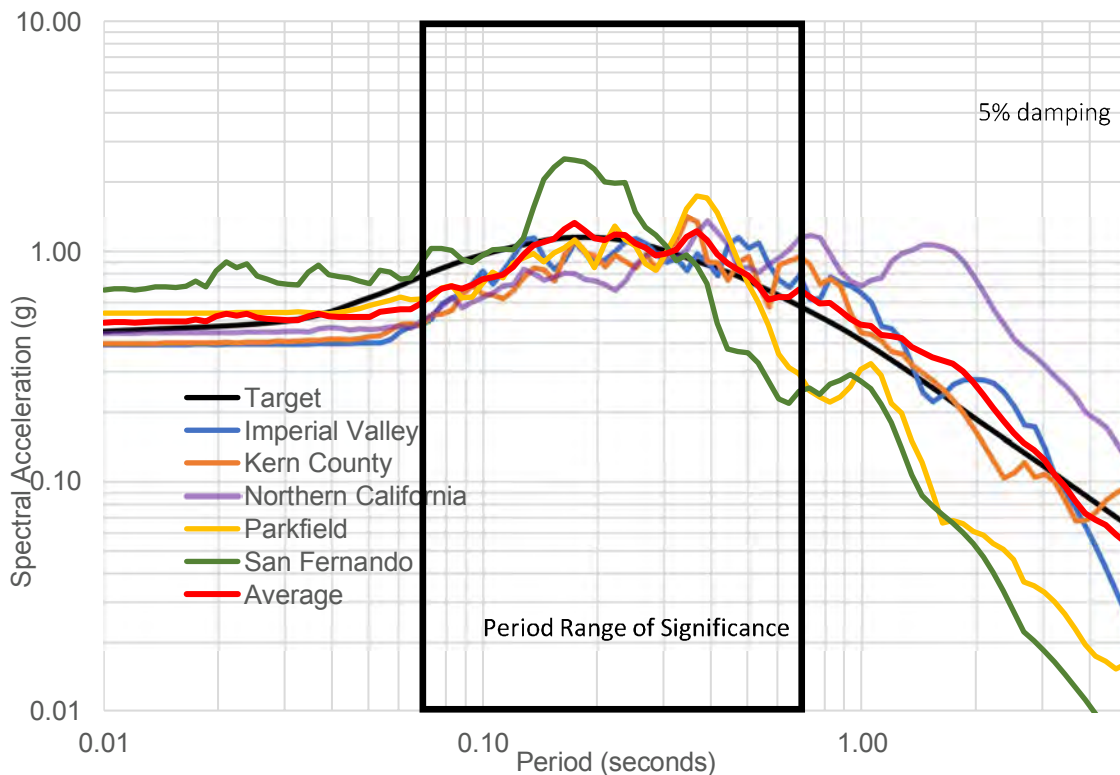

Figure 1. Comparison of Target Spectrum to Computed Response Spectra

Site Response Analysis

We evaluated the one-dimensional, nonlinear response of the site soils as described in ASCE 7-16 Section 21.1. The site response analyses were performed using the computer program DEEPSOIL v.7.0.26.0 (Hashash and others, 2017). We developed two soil models for analysis from the sCPT-01 and sCPT-02 results and the field and laboratory testing. In both models, we assigned $V_s = 1,800$ feet/second at a depth of 200 feet. Between the termination depth of the sCPT soundings (about 100 feet) and a depth of 200 feet, we relied upon regional velocity model data to develop the profiles.

The time domain modeling employed the General Quadratic/Hyperbolic Model (GC/H) soil model with non-Masing rules for hysteretic unloading and reloading. Shear modulus reduction curves are required to simulate the change of soil stiffness with shear strain, while damping curves represent the amount of energy dissipated by the soils with shear strain. The DEEPSOIL program includes a variety of pre-programmed relationships for shear modulus and damping. We selected the pressure-dependent Darendeli (2001) curves with the high strain values of shear modulus corrected for soil strength (Phillips and Hashash, 2009). In particular, we relied upon correlations to the Cone Penetration Test sounding data at the site for estimates of overconsolidation ratio and at-rest earth pressure. The material below the soil models was assumed to be an elastic half-space. Equivalent linear, frequency domain and nonlinear, effective stress analyses, were performed in parallel with the nonlinear, total stress analyses as a check of model outputs.

We followed ASCE 7-16 Chapter 21 procedures to develop the site-specific MCE_R response spectrum at the ground surface. That is, ratios of 5 percent damped response spectra of surface ground motions to input base ground motions were calculated at select periods and the ratio at each period was multiplied by the MCE_R response spectrum of the base motion. Figure 2 shows the site amplification factors as a function of oscillator period computed from the nonlinear total stress site response analyses. The red line in Figure 2 represents the average of the site amplification factors.

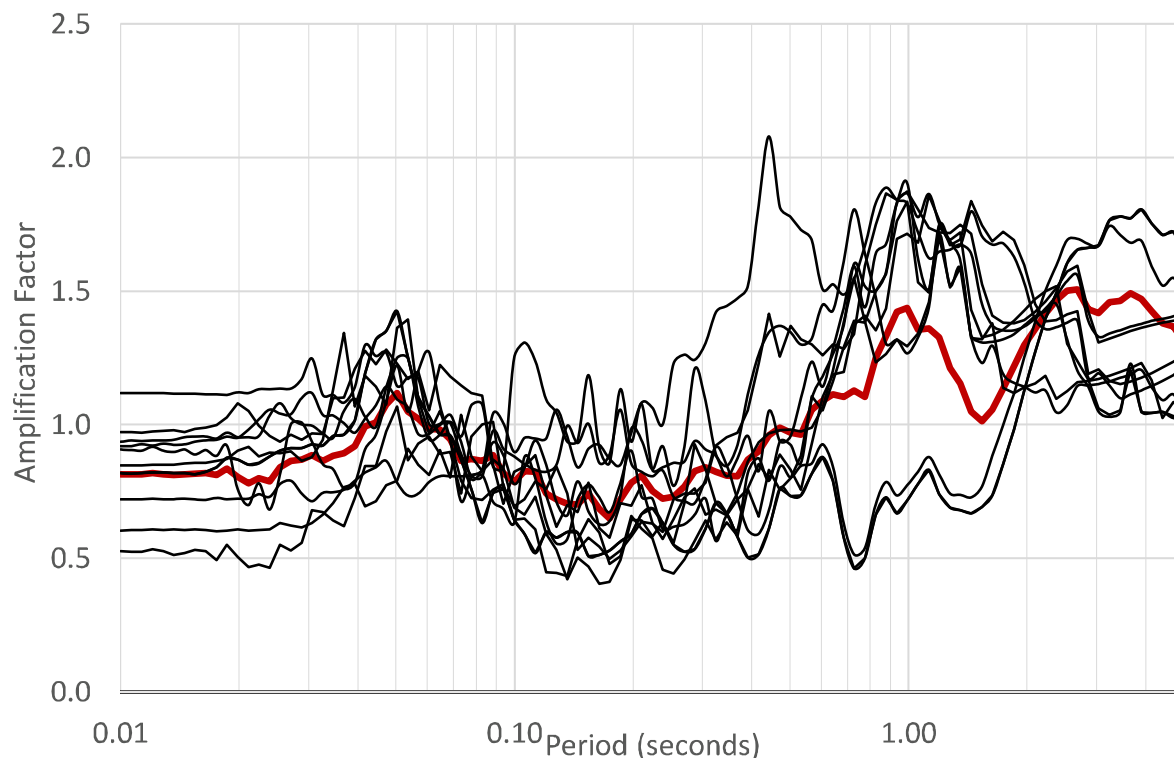

Figure 2. Computed Site Amplification Factors

Design Response Spectrum and Design Acceleration Parameters

ASCE 7-16 Section 21.3 states that the design spectral response acceleration at any period shall be determined by reducing the site-specific MCE_R spectral response accelerations by one-third. However, the design spectral response acceleration at any period shall not be taken as less than 80 percent of the spectral acceleration determined in accordance with the general procedure where $F_a = 1.17$ (Section 11.4) and $F_v = 2.5$ (Section 21.3) for Site Class D. Figure 3 compares the general procedure design response spectra and the spectra from the site-specific study. As seen in Figure 3, the site-specific design response spectrum (DRS) is equivalent to two-thirds of the site-specific MCE_R spectrum below a period of 0.4 seconds and equivalent to 80 percent of the ASCE 7-16 Site Class D spectrum for periods equal to and greater than 0.4 seconds. The attached Table 2 lists the acceleration response spectral values (5 percent damping) and site amplification factors used to generate the site-specific DRS.

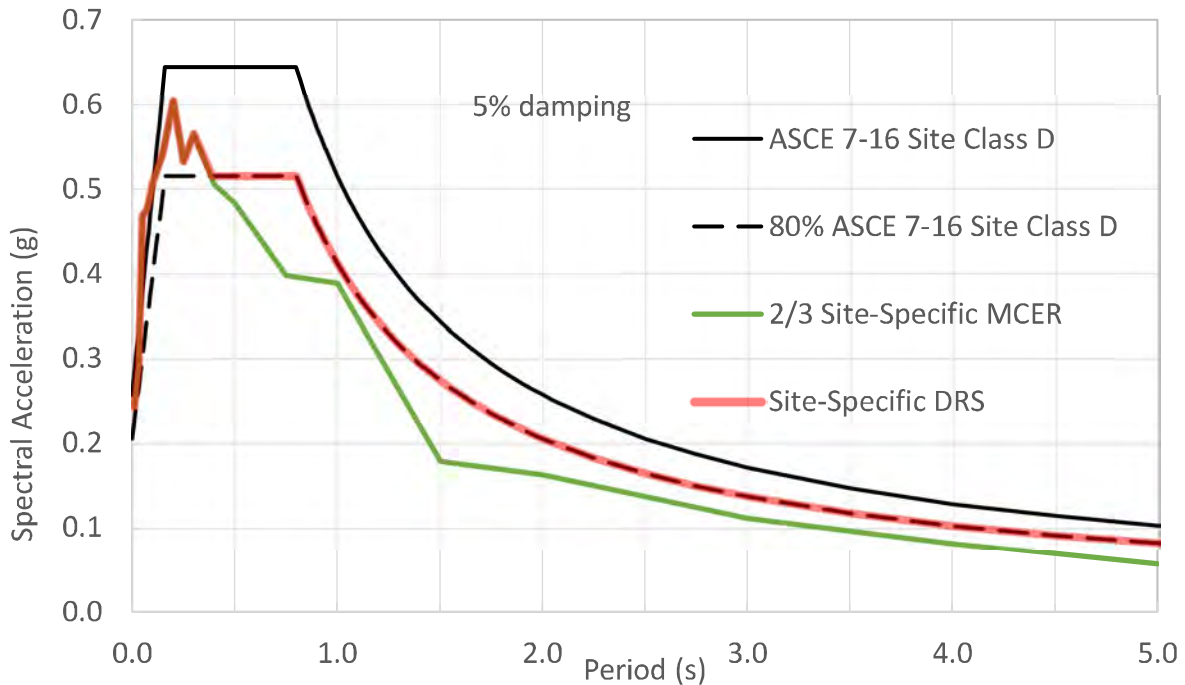

Figure 3. Comparison of Design Response Spectra

Using ASCE 7-16 Section 21.4, the site-specific seismic design parameters are defined as follows:

- $S_{DS} = 0.544g$, based on the spectral acceleration at a period of 0.2 seconds (i.e., $S_{DS} = 0.9 * 0.604g$)
- $S_{D1} = 0.412$, based on the spectral acceleration at a period of 1.0 second
- $S_{MS} = 0.816g$, based on 1.5 times S_{DS}
- $S_{M1} = 0.618g$, based on 1.5 times S_{D1}

Site-Specific Maximum Considered Earthquake Geometric Mean (MCE_G) Peak Ground Acceleration

According to ASCE 7-16 Section 21.5, the site-specific MCE_G peak ground acceleration, PGA_M , is equivalent to the probabilistic geometric mean peak ground acceleration provided it is not less than 80 percent of the PGA_M determined from the general procedure for Site Class D (see attached ATC hazards by location). For this site, $PGA_M = 0.399g$ which is the probabilistic geometric mean value.

GENERAL COMMENTS

The analysis and recommendations presented in this report are based upon the data obtained from explorations performed by Terracon and from other information discussed in this report. This report does not reflect variations that may occur between explorations, across the site, or due to the modifying effects of construction or weather. The nature and extent of such variations may not become evident until during or after construction. If variations appear, we should be immediately notified so that further evaluation and supplemental recommendations can be provided.

This report has been prepared for the exclusive use of our client for specific application to the project discussed and has been prepared in accordance with generally accepted geotechnical engineering practices. No warranties, either expressed or implied, are intended or made. In the event that changes in the nature, design, or location of the project as outlined in this report are planned, the conclusions and recommendations contained in this report shall not be considered valid unless Terracon reviews the changes and either verifies or modifies the conclusions of this report in writing.

CLOSURE

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning this report, or if we may be of further service, please contact us.

Sincerely,
Terracon Consultants, Inc.

David A. Baska, Ph.D., P.E., G.E.
Principal Seismologist/Earthquake Engineer

Rick S. Greeley, E.I.
Staff Engineer

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

**APN 192-020-140-000, 192-
020-590-000, and 192-020-
600-000**

Lathrop, California 95330

Report Date: March 8, 2021
Partner Project No. 21-308862.1

Prepared for:

Hodgdon Group Realty, Inc.
1461 East Cooley Drive, Suite 230
Colton, California 92324

March 8, 2021

Mr. Sean Asmus
Hodgdon Group Realty, Inc.
1461 East Cooley Drive, Suite 230
Colton, California 92324

Subject: Phase I Environmental Site Assessment
APN 192-020-140-000, 192-020-590-000, and 192-020-600-000
Lathrop, California 95330
Partner Project No. 21-308862.1

Dear Mr. Asmus:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (704) 994-8423.

Sincerely,

Michael T. Chang
Principal

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by Hodgdon Group Realty, Inc. for the property located at APN 192-020-140-000, 192-020-590-000, and 192-020-600-000 in Lathrop, San Joaquin County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide Hodgdon Group Realty, Inc. with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the northern side of Spartan Way, eastern and western sides of Golden Valley Parkway, western side of Manthey Road, and northern and southern sides of Don Reis Road within a mixed residential, commercial, and agricultural area of San Joaquin County. Please refer to the table below for further description of the subject property:

Subject Property Data

Addresses (APNs):	APN 192-020-140-000, 192-020-590-000, and 192-020-600-000, Lathrop, California
Additional Address:	14101 South Manthey Road
Property Use:	Vacant Land
Land Acreage (Ac):	126.49
Assessor's Parcel Number (APN):	192-020-140-000, 192-020-590-000, and 192-020-600-000
Site Assessment Performed By:	Christopher Olsen of Partner
Site Assessment Conducted On:	March 1, 2021

The subject property consists of three parcels of vacant land. Currently, there are no onsite operations and no permanent structures. Partner did not observe any evidence of any dumping of hazardous substances, surface staining, or distressed vegetation on the subject property. Partner observed soil piles, wood pile, and agricultural equipment on the subject property parcels.

According to available historical sources, the subject property was formerly developed with a residential-type building, outbuildings, and agricultural land from at least 1915 to 1968; agricultural land from at least 1975 to 1993; agricultural land and vacant cleared land in *circa* 2006; and vacant land since at least 2009.

The immediately surrounding properties consist of agricultural land, pond and pump equipment, and residence to the north; Don Reis Road, Spartan Way, agricultural land, vacant warehouse, residences and outbuildings, and a dirt-covered driveway to the south; vacant land and Manthey Road to the east beyond which is Interstate 5 and an Interstate 5 off-ramp; and a vacant warehouse and agricultural land to the west.

According to Status Environmental, Inc.'s July 28, 2009 Quarterly Groundwater Monitoring Report – Second Quarter 2009 for Joe's Truck Plaza – 15600 South Harlan Road (located approximately 2,000 feet south of the property) and topographic map interpretation, the depth to groundwater in the vicinity of

the subject property is inferred to be approximately ten to 15 feet below ground surface (bgs) and groundwater flow is inferred to be toward the west.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- According to a historical review, the subject property has been used for agricultural purposes from at least 1915 until 2006. Since portions of the subject property parcel were historically used for agricultural purposes, there is a potential that agricultural related chemicals including pesticides, herbicides, and fertilizers may have been used and stored onsite. No evidence of pesticide or herbicide mixing areas or bulk storage areas was observed during the site reconnaissance or during Partner's review of historical aerial photographs. According to information provided by the client, the subject property is planned for commercial/warehouse development. The occupied areas of the subject property will either paved over or covered by building structures that minimize direct contact to any potential remaining concentrations in the soil. Additionally, during site development activities, near surface soils (where residual agricultural chemical concentrations would most likely been present, if at all) will be mixed with fill material or disturbed during grading. Also, it is common that engineered fill material is placed over underlying soils as part of the development activities. These additional variables serve to further

reduce the potential for exposure to residual agricultural chemicals (if any). Based on planned development activities, Partner concludes that the possible use of agricultural chemicals does not represent a recognized environmental condition or a human health risk, and no additional investigation is required. Additionally, based on this information, vapor migration is not expected to represent a significant environmental concern at this time.

Conclusions, Opinions, and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of APN 192-020-140-000, 192-020-590-000, and 192-020-600-000 in Lathrop, San Joaquin County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property; however, environmental issues were identified. Based on the conclusions of this assessment, Partner recommends no further investigation of the subject property at this time.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at APN 192-020-140-000, 192-020-590-000, and 192-020-600-000 in Lathrop, San Joaquin County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential

exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Hodgdon Group Realty, Inc. engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Hodgdon Group

Realty, Inc.. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators, and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner was not able to document the historical use of the subject property prior to 1915. The following sources were reviewed during the course of this assessment and found to be limited: aerial photographs were not available prior to 1937; city directories were not available prior to 1981; topographic maps prior to 1915 were not reasonably ascertainable from local agencies; and other historical sources such as fire insurance maps did not provide coverage of the subject property. This data failure is not considered critical and does not change the conclusions of this report, as the 1915 topographic map revealed the subject property to be agricultural land with roads and one structure. The 1937 aerial photograph indicated that the subject property was utilized for agricultural purposes and developed with a residential-type building, outbuildings, and roads. In addition, the adjacent and surrounding areas are also shown mostly as farmland with scattered residential development.
- Partner was unable to determine the property use at 5-year intervals, which constitutes a data gap. Except for property tax files and recorded land title records, which were not considered to be sufficiently useful, Partner reviewed all standard historical sources and conducted appropriate interviews.
- Partner's view of the ground during the site assessment was obstructed due to dense vegetation and ground cover. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at APN 192-020-140-000, 192-020-590-000, and 192-020-600-000 in Lathrop, California is located on the northern side of Spartan Way, eastern and western sides of Golden Valley Parkway, western side of Manthey Road, and northern and southern sides of Don Reis Road. According to the San Joaquin County Assessor, the subject property is described as Assessor Parcel Numbers 192-020-140-000, 192-020-590-000, and 192-020-600-000. Ownership is currently vested in Don Reis Ranch, Inc.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property consists of three parcels of vacant land.

The subject property is designated for commercial and industrial development by the City of Lathrop.

The subject property was identified as a National Pollutant Discharge Elimination System (NPDES) site in the regulatory database report, as further discussed in Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a mixed residential, commercial, and agricultural area of San Joaquin County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties

- North:** Agricultural land, pond and pump equipment, residence (42 De Lima Road) and a dirt-covered driveway
- South:** Don Reis Road, Spartan Way, agricultural land, vacant warehouse (240 Don Reis Road), residences and outbuildings (410 and 422 Don Reis Road), and a dirt-covered driveway
- East:** Vacant land and Manthey Road beyond which is Interstate 5 and an Interstate 5 off-ramp
- West:** A vacant warehouse (240 Don Reis Road) and agricultural land

No adjacent properties were identified in the regulatory database report of Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Lathrop, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately twelve feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the west. Improvements with the exception of roadways are not depicted on the 2012 topographic map.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

According to topographic map interpretation, the direction of groundwater flow in the vicinity of the subject property is inferred to be toward the west. The nearest surface water in the vicinity of the subject property is the San Joaquin River located approximately 3,000 feet west of the subject property. No settling ponds, lagoons, surface impoundments, wetlands, or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the City of Lathrop serves the subject property vicinity. According to the 2019 Water Quality Report, the source of public water for the City of Lathrop is groundwater from public wells located within the city limits.

According to Status Environmental, Inc.'s July 28, 2009 Quarterly Groundwater Monitoring Report – Second Quarter 2009 for Joe's Truck Plaza – 15600 South Harlan Road (located approximately 2,000 feet south of the property), the depth to groundwater in the vicinity of the subject property is inferred to be approximately ten to 15 feet bgs.

2.4.3 Geology/Soils

The subject property is situated within the Central Valley physiographic province of the State of California. The uppermost geologic formation underlying the soils at the subject property is the Pleistocene and Holocene Age San Joaquin Valley formation. The San Joaquin Valley formation comprises the underlying stratigraphy and consists mostly of igneous, metamorphic and unconsolidated marine sediment deposits.

Based on information obtained from the United States Department of Agriculture Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as Bisgani loamy coarse sand (partially drained), Dello clay loam (drained), Timor loamy sand and Tinnin loamy coarse sand with zero to two percent slopes. The Bisgani soil series consists of poorly drained loamy coarse sand and coarse sand with a depth to 60 inches. The parent material is described as alluvium derived from granitic rock sources. The Dello soil series consists of very poorly drained clay loam and sand with a depth to 60 inches. The parent material is described as alluvium derived from granitic rock sources. The Timor soil series consists of moderately well drained loamy sand and cemented soil with a depth to 60 inches. The parent material is described as alluvium derived from granitic rock sources. The Tinnin soil series consists of well drained loamy coarse sand with a depth to 75 inches. The parent material is described as alluvium derived from granitic rock sources.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06077C0610F, dated October 16, 2009, the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains with an area of reduced flood risk due to a levee.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information

Period/Date	Source	Description/Use
1915-1968	Aerial Photographs, Topographic Map	Agricultural land and single-family residence
1975-1993	Aerial Photographs	Agricultural land
2006	Aerial Photograph	Agricultural land and vacant cleared land
2009-Present	Aerial Photographs, Onsite Observations, Interviews	Vacant land

According to a historical review, the subject property has been used for agricultural purposes from at least 1915 until 2006. Since portions of the subject property parcel were historically used for agricultural purposes, there is a potential that agricultural related chemicals including pesticides, herbicides, and fertilizers may have been used and stored onsite. No evidence of pesticide or herbicide mixing areas or bulk storage areas was observed during the site reconnaissance or during Partner's review of historical aerial photographs. According to information provided by the client, the subject property is planned for commercial/warehouse development. The occupied areas of the subject property will either paved over or covered by building structures that minimize direct contact to any potential remaining concentrations in the soil. Additionally, during site development activities, near surface soils (where residual agricultural chemical concentrations would most likely been present, if at all) will be mixed with fill material or disturbed during grading. Also, it is common that engineered fill material is placed over underlying soils as part of the development activities. These additional variables serve to further reduce the potential for exposure to residual agricultural chemicals (if any). Based on planned development activities, Partner concludes that the possible use of agricultural chemicals does not represent a recognized environmental condition or a human health risk, and no additional investigation is required. Additionally, based on this information, vapor migration is not expected to represent a significant environmental concern at this time.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Data Resources, Inc. (EDR) on February 22, 2021. The following was observed on the subject property and adjacent properties during the aerial photograph review:

Date:	1937, 1940	Scale:	1"=500'
Subject Property:	The subject property appears to be agricultural land with roads throughout the property. Residential-type buildings and outbuildings are located on the northern side of the subject property.		
North:	The area adjacent to the north appears to be agricultural land and developed with scattered residential-type buildings and outbuildings.		
South:	The area adjacent to the south appears to be agricultural land and roads.		
East:	The area adjacent to the east appears to be agricultural land and developed with scattered residential-type buildings, outbuildings and roads.		
West:	The area adjacent to the west appears to be agricultural land and roads.		

<i>Date:</i>	<i>1957, 1963, 1968</i>	<i>Scale:</i>	<i>1"=500'</i>
Subject Property:	No significant changes visible except several outbuildings have been razed.		
North:	No significant changes visible		
South:	The area adjacent to the south appears to be agricultural land, roads and developed with residential-type buildings and outbuildings.		
East:	The area adjacent to the east appears to be agricultural land and developed with scattered residential-type buildings, outbuildings and roads.		
West:	The area adjacent to the west appears to be agricultural land, and developed with residential-type buildings, outbuildings and roads.		

<i>Date:</i>	<i>1975, 1982, 1993</i>	<i>Scale:</i>	<i>1"=500'</i>
Subject Property:	The subject property appears to be agricultural land and roads. The previously identified structures at the northern end of the property appear to have been razed.		
North:	The area adjacent to the north appears to be developed with residential and agricultural-type buildings and contains agricultural land.		
South:	The area adjacent to the south appears to be agricultural land, roads and developed with residential-type buildings, warehouses and outbuildings.		
East:	The area adjacent to the east of a roadway appears to be vacant land and an I-5 off-ramp with I-5 farther east.		
West:	The area adjacent to the west appears to be agricultural land, and developed with residential-type buildings, warehouses, outbuildings and roads.		

<i>Date:</i>	<i>2006</i>	<i>Scale:</i>	<i>1"=500'</i>
Subject Property:	The subject property appears to be vacant cleared land with an area of agricultural land and/or pond at the southeastern end of the property.		
North:	The area adjacent to the north appears to be developed with residential-type buildings and contains agricultural land.		
South:	No significant changes visible		
East:	No significant changes visible		
West:	No significant changes visible		

<i>Date:</i>	<i>2009, 2012, 2016</i>	<i>Scale:</i>	<i>1"=500'</i>
Subject Property:	The subject property appears to be vacant and cleared land.		
North:	No significant changes visible		
South:	The area adjacent to the south appears to be developed with residential-type buildings, outbuildings, warehouse and a road, and contains vacant land.		
East:	No significant changes visible		
West:	No significant changes visible		

Copies of reviewed aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner requested copies from the collection of Sanborn Fire insurance maps from EDR on February 22, 2021. Sanborn map coverage was not available for the subject property.

A copy of the Certified Sanborn Map Report No Coverage Letter is included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from EDR on February 24, 2021 for past names and businesses that were listed for the subject property and adjacent properties. City directories were not identified for the subject property. However, city directory listings were identified for adjacent properties. The findings are presented in the following table:

City Directory Search for Adjacent Properties	
Year(s)	Occupant Listed
1981, 1985	No Listings (240 Don Reis Road); Residential (410 Don Reis Road); No Listings (422 Don Reis Road)
1992	No Listings (240 Don Reis Road); No Listings (410 Don Reis Road); No Listings (422 Don Reis Road)
1995	No Listings (240 Don Reis Road); Residential (410 Don Reis Road); No Listings (422 Don Reis Road)
2000	No Listings (240 Don Reis Road); No Listings (410 Don Reis Road); No Listings (422 Don Reis Road)
2005	Residential (240 Don Reis Road); Cal Tec Windshield Repair, Golf Gone Wild and Residential (410 Don Reis Road); Residential (422 Don Reis Road)
2010	No Listings (240 Don Reis Road); No Listings (410 Don Reis Road); Residential (422 Don Reis Road)
2014	Residential (240 Don Reis Road); No Listings (410 Don Reis Road); Residential (422 Don Reis Road)
2017	Residential (240 Don Reis Road); Residential (410 Don Reis Road); Residential (422 Don Reis Road)

Based on the city directory review, no environmentally sensitive listings were identified for the adjacent property addresses.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from EDR on February 22, 2021. The following was observed on the subject property and adjacent properties during the topographic map review:

Date: 1915	
Subject Property:	The subject property is depicted as undeveloped land with roads and one structure.
North:	The area adjacent to the north is depicted as undeveloped land with roads.
South:	The area adjacent to the south is depicted as undeveloped land with a road.
East:	The area adjacent to the east is depicted as undeveloped land with roads.
West:	The area adjacent to the south is depicted as undeveloped land with a road.

Date: 1952

Subject Property: No significant changes depicted.
North: The area adjacent to the north is depicted as undeveloped land with roads and two structures.
South: The area adjacent to the south is depicted as undeveloped land with a road and two structures.
East: The area adjacent to the east is depicted as undeveloped land with roads and two structures.
West: The area adjacent to the south is depicted as undeveloped land with a road and one structure.

Date: 1968

Subject Property: No significant changes depicted.
North: The area adjacent to the north is depicted as undeveloped land with roads and multiple structures.
South: The area adjacent to the south is depicted as undeveloped land with a road and multiple structures.
East: The area adjacent to the east is depicted as undeveloped land with Interstate 5 farther east.
West: The area adjacent to the south is depicted as undeveloped land with roads.

Date: 1976, 1987, 1994, 1996

Subject Property: No significant changes depicted.
North: The area adjacent to the north is depicted as undeveloped land with roads and multiple structures.
South: The area adjacent to the south is depicted as undeveloped land with a road and multiple small structures and industrial warehouse-type buildings.
East: The area adjacent to the east of a road is depicted as undeveloped land and Interstate 5.
West: The area adjacent to the south is depicted as undeveloped land with multiple small structures, two industrial warehouse-type buildings and a road.

Copies of reviewed topographic maps are included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 State Department

Regulatory Agency Data

Name of Agency:	California Environmental Protection Agency (CalEPA) Regulated Site Portal
Point of Contact:	Online Records
Agency Address:	1001 I Street, Sacramento, California 95812
Agency Phone Number:	(916) 323-2514
Date of Contact:	February 17, 2021
Method of Communication:	Internet
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of underground storage tanks (USTs) and activity use limitations (AULs) on the subject property were on file with the CalEPA.

4.1.2 Health Department

Regulatory Agency Data

Name of Agency:	San Joaquin County Environmental Health Department (SJCEHD)
Point of Contact:	Dom Martorella
Agency Address:	1868 East Hazelton Avenue, Stockton, California 95205
Agency Phone Number:	(209) 468-0339
Date of Contact:	February 17, 2021
Method of Communication:	Website and Email
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the SJCEHD.

4.1.3 Fire Department

Regulatory Agency Data

Name of Agency:	Lathrop-Manteca Fire District (LMFD)
Point of Contact:	Staff
Agency Address:	800 J Street, Lathrop, California 95330
Agency Phone Number:	(209) 858-2331
Date of Contact:	February 17, 2021
Method of Communication:	Telephone
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the LMFD.

4.1.4 Air Pollution Control Agency

Regulatory Agency Data

Name of Agency: San Joaquin Valley Air Pollution Control District (SJVAPCD)
Point of Contact: Staff
Agency Address: 4800 Enterprise Way, Modesto, California 95356
Agency Phone Number: (209) 557-6400
Date of Contact: February 17, 2021
Method of Communication: Telephone
Summary of Communication: No Permits to Operate (PTO), Notices of Violation (NOV), or Notices to Comply (NTC) or the presence of AULs, dry cleaning machines, or USTs were on file for the subject property with the SJVAPCD.

4.1.5 Regional Water Quality Agency

Regulatory Agency Data

Name of Agency: Regional Water Quality Control Board (RWQCB)
Point of Contact: GeoTracker
Agency Address: 11020 Sun Center Drive, Suite 200, Rancho Cordova, California 95670
Agency Phone Number: (916) 464-3291
Date of Contact: February 17, 2021
Method of Communication: Website
Summary of Communication: No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the RWQCB.

4.1.6 Department of Toxic Substances Control

Regulatory Agency Data

Name of Agency: California Department of Toxic Substances Control (DTSC)
Point of Contact: EnviroStor and Hazardous Waste Tracking System (HWTS)
Agency Address: 1001 I Street, Sacramento, California 95814
Agency Phone Number: (916) 255-3687
Date of Contact: February 17, 2021
Method of Communication: Internet
Summary of Communication: No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with DTSC's EnviroStor database. There are no listings for the subject property in the HWTS database.

4.1.7 Building Department

Regulatory Agency Data

Name of Agency:	Lathrop Building Department (LBD)
Point of Contact:	Staff
Agency Address:	390 Towne Centre Drive, Lathrop, California 95330
Agency Phone Number:	(209) 941-7290
Date of Contact:	February 17, 2021
Method of Communication:	Telephone
Summary of Communication:	According to a representative of the LBD, there are no records for the subject property.

4.1.8 Planning Department

Regulatory Agency Data

Name of Agency:	Lathrop Planning Department (LPD)
Point of Contact:	Staff
Agency Address:	390 Towne Centre Drive, Lathrop, California 95330
Agency Phone Number:	(209) 941-7290
Date of Contact:	February 17, 2021
Method of Communication:	In Person
Summary of Communication:	According to records reviewed, the subject property is zoned Neighborhood Park (NP/DS-CL), Commercial Office (CO/DS-CL), and Residential/Mixed Use (R/MU/DS-CL).

4.1.9 Oil & Gas Exploration

Regulatory Agency Data

Name of Agency:	California Geologic Energy Management Division (CalGEM)
Point of Contact:	Online Records
Agency Address:	801 K Street, MS 20-22, Sacramento, California 95814
Agency Phone Number:	(916) 322-1110
Date of Contact:	February 17, 2021
Method of Communication:	Online CalGEM mapping system
Summary of Communication:	According to CalGEM's online mapping system, no oil or gas wells are located on or adjacent to the subject property.

4.1.10 Assessor's Office

Regulatory Agency Data

Name of Agency:	San Joaquin County Assessor (SJCA)
Point of Contact:	Property Search
Agency Address:	44 North San Joaquin Street #230, Stockton, California 95202
Agency Phone Number:	(209) 468-2630
Date of Contact:	February 17, 2021
Method of Communication:	In Person
Summary of Communication:	According to records reviewed, the subject property is identified as Assessor Parcel Numbers (APN) 192-020-140-000, 192-020-590-000, and 192-020-600-000, which contains a total of 126.49 acres. No

Regulatory Agency Data

additional pertinent information was included in the SJCA file.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by Environmental Data Resources, Inc. (EDR). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data

Database	Search Radius (mile)	Subject Property	Adjacent Properties	Sites of Concern
Federal NPL or Delisted NPL Site	1.00	N	N	N
Federal CERCLIS Site	0.50	N	N	N
Federal CERCLIS-NFRAP Site	0.50	N	N	N
Federal RCRA CORRACTS Facility	1.00	N	N	N
Federal RCRA TSDF Facility	0.50	N	N	N
Federal RCRA Generators Site (LQG, SQG, CESQG)	0.25	N	N	N
Federal IC/EC Registries	0.50	N	N	N
Federal ERNS Site	Subject Property	N	N/A	N/A
State/Tribal Equivalent NPL	1.00	N	N	N
State/Tribal Equivalent CERCLIS	1.00	N	N	N
State/Tribal Landfill/Solid Waste Disposal Site	0.50	N	N	N
State/Tribal Leaking Storage Tank Site	0.50	N	N	N
State/Tribal Registered Storage Tank Sites (UST/AST)	0.25	N	N	N
State/Tribal Voluntary Cleanup Sites (VCP)	0.50	N	N	N
State/Tribal Spills	0.50	N	N	N
Federal Brownfield Sites	0.50	N	N	N
State Brownfield Sites	0.50	N	N	N
EDR MGP	Varies	N	N	N
EDR US Hist Auto Station	Varies	N	N	N
EDR US Hist Cleaners	Varies	N	N	N
State NPDES Site	Varies	Y	N	N

4.2.2 Subject Property Listings

The subject property was identified as a NPDES site in the regulatory database report, as discussed below:

- The subject property, identified as Dos Ries Ranch at 14101 Manthey Road, is listed on the NPDES database as a facility with an expired construction permit as of December 30, 2011. There are no listings pertaining to any spills or releases of hazardous substances associated with the subject property. No apparent construction activities were observed during the time period during a historical review of the subject property. Based on the nature of the permit for storm water management, lack of a documented release, and regulatory oversight, this listing is not considered a recognized environmental condition.

4.2.3 Adjacent Property Listings

The adjacent properties are not identified in the regulatory database report.

4.2.4 Sites of Concern Listings

No sites of concern are identified in the regulatory database report.

4.2.5 Orphan Listings

In some cases, location information supplied by the regulatory agencies is insufficient to allow the database companies to geocode facility locations. These facilities are listed under the non-geocoded section within the EDR report

No orphan listings of concern are identified in the regulatory database report.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from Hodgdon Group Realty, Inc. (User of this report).

User Responsibilities				
Item	Provided By User	Not Provided By User	Discussed Below	Does Not Apply
AAI User Questionnaire			X	
Title Records, Environmental Liens, and AULs			X	
Specialized Knowledge			X	
Actual Knowledge			X	
Valuation Reduction for Environmental Issues			X	
Identification of Key Site Manager	Section 5.1.3			
Reason for Performing Phase I ESA	Section 1.1			
Prior Environmental Reports			X	
Other				X

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property, identified as Dos Reis Ranch, Inc., was not available to be interviewed at the time of the assessment. However, Mr. Sean Asmus, buyer's representative, completed a Pre-Survey Environmental Site Assessment Questionnaire. Based on review of the questionnaire, the property is approximately 130+/- acres in sized and is currently vacant land. Historically, the subject property was developed as agricultural land. Mr. Asmus was not aware of any USTs, ASTs, clarifiers, oil/water separators, spills or releases, waste treatment systems, groundwater monitoring wells, historical dry cleaning operations, or hazardous substance use/storage/generation on the subject property. Mr. Asmus was not aware of any environmental concerns with the surrounding properties.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User.

5.1.3 Interview with Key Site Manager

A key site manager was not available to be interviewed at the time of this assessment based on the unoccupied agricultural use of the subject property. However, as previously discussed above, Mr. Asmus, buyer's representative completed a Pre-Survey Environmental Site Assessment Questionnaire which provides additional information about the subject property. Based on his responses, as well as a historical review of the subject property and a review of the regulatory database report, this data gap does not impact the conclusions of this assessment.

5.1.4 Interviews with Past Owners, Operators, and Occupants

Interviews with past owners, operators, and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was provided with a copy of a Preliminary Title Report issued by Chicago Title Company dated January 28, 2021.

A copy of the document is provided in Appendix B of this report.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

No previous reports or other pertinent documentation was provided to Partner for review during the course of this assessment.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data

Site Assessment Performed By:	Christopher Olsen
Site Assessment Conducted On:	March 1, 2021

The table below provides the subject property personnel interviewed during the field reconnaissance:

Partner was not accompanied during the field reconnaissance.

No potential environmental concerns were identified during the onsite reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Due to the vacant nature, solid waste is not currently generated at the subject property. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

Due to the vacant nature, sanitary discharges are not currently generated at the subject property. Sanitary discharges for the surrounding area are directed into the municipal sanitary sewer system. The City of Lathrop services the subject property vicinity. No wastewater treatment facilities or septic systems were observed or reported on the subject property.

6.1.3 Surface Water Drainage

Storm water naturally infiltrates the ground surface. The subject property is not connected to a municipal owned and maintained sewer system.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish and Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

The subject property is not currently improved with structures; as such, no heating and cooling systems or domestic hot water equipment were observed on the subject property.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Due to the vacant nature, domestic wastewater is not currently generated at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property during the site reconnaissance.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

No hazardous substances or petroleum products were observed on the subject property during the site reconnaissance.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former ASTs or USTs was observed during the site reconnaissance.

6.2.3 Evidence of Releases

No spills, stains, or other indications that a surficial release has occurred at the subject property were observed during the site reconnaissance.

6.2.4 Polychlorinated Biphenyls (PCBs)

No potential PCB-containing equipment (transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, etc.) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent, or Noxious Odors

No strong, pungent, or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps, and Clarifiers

No drains, sumps, or clarifiers were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds, and Lagoons

No pits, ponds, or lagoons were observed on the subject property during the site reconnaissance.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property during the site reconnaissance.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed during the site reconnaissance.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building that have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property is not currently improved with permanent structures; as such, an asbestos evaluation was not considered within the scope of this assessment.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm² (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

The subject property is not currently improved with permanent structures; as such, lead-based paint was not considered within the scope of this assessment.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	Average Predicted Radon Levels	Potential
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 3. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the City of Lathrop serves the subject property vicinity. According to the 2019 Water Quality Report, the source of public water for the City of Lathrop is groundwater from public wells located within the city limits. The exact location of the wells could not be determined. No evidence of water supply wells was observed on or adjacent to the subject property. According to the City of Lathrop and the 2019 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g. in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

The subject property is not currently improved with structures; as such, a visual assessment of mold was not considered within the scope of this assessment.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises. No items of environmental concern were identified on the adjacent properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

7.0 FINDINGS AND CONCLUSIONS

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- According to a historical review, the subject property has been used for agricultural purposes from at least 1915 until 2006. Since portions of the subject property parcel were historically used for agricultural purposes, there is a potential that agricultural related chemicals including pesticides, herbicides, and fertilizers may have been used and stored onsite. No evidence of pesticide or herbicide mixing areas or bulk storage areas was observed during the site reconnaissance or during Partner's review of historical aerial photographs. According to information provided by the client, the subject property is planned for commercial/warehouse development. The occupied areas of the subject property will either paved over or covered by building structures that minimize direct contact to any potential remaining concentrations in the soil. Additionally, during site development activities, near surface soils (where residual agricultural chemical concentrations would most likely been present, if at all) will be mixed with fill material or disturbed during grading. Also, it is common that engineered fill material is placed over underlying soils as part of the development activities. These additional variables serve to further reduce the potential for exposure to residual agricultural chemicals (if any). Based on planned

development activities, Partner concludes that the possible use of agricultural chemicals does not represent a recognized environmental condition or a human health risk, and no additional investigation is required. Additionally, based on this information, vapor migration is not expected to represent a significant environmental concern at this time.

Conclusions, Opinions, and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of APN 192-020-140-000, 192-020-590-000, and 192-020-600-000 in Lathrop, San Joaquin County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property; however, environmental issues were identified. Based on the conclusions of this assessment, Partner recommends no further investigation of the subject property at this time.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at APN 192-020-140-000, 192-020-590-000, and 192-020-600-000 in Lathrop, San Joaquin County, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Partner Engineering and Science, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

Limited Permission To Make Copies

Partner Engineering and Science, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on **3/3/2021 at 10:59 PM** and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

PHASE I ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

The following questionnaire is required by the ASTM Standard E 1527-13, which adheres to the All Appropriate Inquiries (AAI) Rule (United States Environmental Protection Agency) (40 CFR 312).

As defined by ASTM, the User of the report is the “party seeking to use Practice E 1527 to complete an environmental site assessment of the property. A user may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. The user has specific obligations for completing a successful application of this practice.”

PROPERTY ADDRESS:	
PROPERTY CITY, STATE ZIP:	

1. Environmental liens that are filed or recorded against the property (40 CFR 312.25)

Did a search of recorded land title records (or judicial records) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?

YES NO

2. Activity and use limitations (AULs) that are in place on the property or that have been filed or records against the property (40 CFR 312.26(a)(1)(v) and (vi))

Did a search of recorded land title records (or judicial records) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

YES NO

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28)

Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

YES NO

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29)

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

YES NO

5. Commonly known or reasonably ascertainable information about the Property (40 CFR 312.30)

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases?

YES NO

a. Do you know the past uses of the property?

YES NO

b. Do you know of specific chemicals that are present or once were present at the property?

YES NO

c. Do you know of spills or other chemical releases that have taken place at the property?

YES NO

d. Do you know of any environmental cleanups that have taken place at the property?

YES NO

Effortless, Efficient, Compliant, and Accessible

PRELIMINARY REPORT

*In response to the application for a policy of title insurance referenced herein, **Chicago Title Company** hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.*

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

The policy(ies) of title insurance to be issued hereunder will be policy(ies) of Chicago Title Insurance Company, a Florida corporation.

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

[Recording No.:](#) [2009-059500](#)

Reference is hereby made to said document for full particulars.

23. The search did not disclose any open mortgages or deeds of trust of record, therefore the Company reserves the right to require further evidence to confirm that the property is unencumbered, and further reserves the right to make additional requirements or add additional items or exceptions upon receipt of the requested evidence.

24. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

25. Any lien or right to a lien for services, labor or material not shown by the Public Records.

26. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other matters which a correct survey would disclose and which are not shown by the public records.

27. Any easements not disclosed by the public records as to matters affecting title to real property, whether or not said easements are visible and apparent.

EXCEPTIONS
(continued)

28. Matters which may be disclosed by an inspection and/or by a correct ALTA/NSPS Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.
29. The Company will require an ALTA/NSPS LAND TITLE SURVEY. If the owner of the Land that is the subject of this transaction is in possession of a current ALTA/NSPS LAND TITLE SURVEY, the Company will require that said survey be submitted for review and approval; otherwise, a new survey, satisfactory to the Company, must be prepared by a licensed land surveyor and supplied to the Company prior to the close of escrow.

The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

30. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance by the corporation named below.

Name of Corporation: Dos Reis Ranch Inc.

- a. A Copy of the corporation By-laws and Articles of Incorporation.
- b. An original or certified copy of a resolution authorizing the transaction contemplated herein.
- c. If the Articles and/or By-laws require approval by a 'parent' organization, a copy of the Articles and By-laws of the parent.

The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

31. The Company will require that an Owner's Affidavit be completed by the party(s) named below before the issuance of any policy of title insurance.

Party(ies): Dos Reis Ranch, Inc., a California corporation

The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit.

32. This transaction requires high liability approval prior to close of escrow together with an inspection of the subject property.

Please advise title department with an estimated date that your transaction will close so we can schedule the necessary approvals and inspections.

33. Prior to the close of escrow and the issuance of an ALTA Coverage Policy, an inspection of the property will be required.

EXCEPTIONS
(continued)

34. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance by the corporation named below:

Name of Corporation: Ashley Furniture Industries, Inc., a Wisconsin corporation

- a) A Copy of the corporation By-laws and Articles of Incorporation
- b) An original or certified copy of a resolution authorizing the transaction contemplated herein
- c) If the Articles and/or By-laws require approval by a 'parent' organization, a copy of the Articles and By-laws of the parent
- d) A current dated certificate of good standing from the proper governmental authority of the state in which the entity was created

The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

35. The transaction contemplated in connection with this Report is subject to the review and approval of the Company's Corporate Underwriting Department. The Company reserves the right to add additional items or make further requirements after such review.

END OF EXCEPTIONS

NOTES

- Note 1.** Note: The name(s) of the proposed insured(s) furnished with this application for title insurance is/are:
Name(s) furnished: Ashley Furniture Industries, Inc., a Wisconsin corporation
If these name(s) are incorrect, incomplete or misspelled, please notify the Company.
- Note 2.** Note: The only conveyance(s) affecting said Land, which recorded within 24 months of the date of this report, are as follows:
Grantor: Dos Reis Ranch, Inc., a California corporation
Grantee: Dos Reis Ranch, Inc., a California corporation
Recording Date: May 27, 2020
[Recording No.: 2020-061686, of Official Records](#)
- Note 3.** Note: The charge for a policy of title insurance, when issued through this title order, will be based on the Basic Title Insurance Rate.
- Note 4.** Note: If a county recorder, title insurance company, escrow company, real estate broker, real estate agent or association provides a copy of a declaration, governing document or deed to any person, California law requires that the document provided shall include a statement regarding any unlawful restrictions. Said statement is to be in at least 14-point bold face type and may be stamped on the first page of any document provided or included as a cover page attached to the requested document. Should a party to this transaction request a copy of any document reported herein that fits this category, the statement is to be included in the manner described.
- Note 5.** Note: Any documents being executed in conjunction with this transaction must be signed in the presence of an authorized Company employee, an authorized employee of a Company agent, an authorized employee of the insured lender, or by using Bancserv or other Company-approved third-party service. If the above requirement cannot be met, please call the Company at the number provided in this report.
- Note 6.** Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.
- Note 7.** The application for title insurance was placed by reference to only a street address or tax identification number. The proposed Insured must confirm that the legal description in this report covers the parcel(s) of Land requested to be insured. If the legal description is incorrect, the proposed Insured must notify the Company and/or the settlement company in order to prevent errors and to be certain that the legal description for the intended parcel(s) of Land will appear on any documents to be recorded in connection with this transaction and on the policy of title insurance.
- Note 8.** Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

NOTES
(continued)

- Note 9.** Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

END OF NOTES

Inquire before you wire!

WIRE FRAUD ALERT

This Notice is not intended to provide legal or professional advice.
If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. **DO NOT** use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the number of relevant parties to the transaction as soon as an escrow account is opened.** **DO NOT** send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do **NOT** reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

FIDELITY NATIONAL FINANCIAL PRIVACY NOTICE

Effective April 9, 2020

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (e.g., name, address, phone number, email address);
- demographic information (e.g., date of birth, gender, marital status);
- identity information (e.g. Social Security Number, driver's license, passport, or other government ID number);
- financial account information (e.g. loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;
- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law. We may share your Personal Information with affiliates (other companies owned by FNF) to directly market to you. Please see "Choices with Your Information" to learn how to restrict that sharing.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information

We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information

If you do not want FNF to share your information among our affiliates to directly market to you, you may send an "opt out" request by email, phone, or physical mail as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you without your consent.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (<https://fnf.com/pages/californiaprivacy.aspx>) or call (888) 413-1748.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.

For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children

The FNF Websites are not intended or designed to attract persons under the age of eighteen (18). We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users

FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans

Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Your Consent To This Privacy Notice; Notice Changes; Use of Comments or Feedback

By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The Privacy Notice's effective date will show the last date changes were made. If you provide information to us following any change of the Privacy Notice, that signifies your assent to and acceptance of the changes to the Privacy Notice. We may use comments or feedback that you submit to us in any manner without notice or compensation to you.

Accessing and Correcting Information; Contact Us

If you have questions, would like to correct your Personal Information, or want to opt-out of information sharing for affiliate marketing, send your requests to privacy@fnf.com, by phone to (888) 934-3354, or by mail to:

Fidelity National Financial, Inc.

CALIFORNIA LAND TITLE ASSOCIATION STANDARD COVERAGE POLICY - 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
(b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
 - (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
 - (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
 - (c) resulting in no loss or damage to the insured claimant;
 - (d) attaching or created subsequent to Date of Policy; or
 - (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate or interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

**CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE**

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
 - a. building;
 - b. zoning;
 - c. land use;
 - d. improvements on the Land;
 - e. land division; and
 - f. environmental protection.This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
 - a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
 - b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;
 - c. that result in no loss to You; or
 - d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.
5. Failure to pay value for Your Title.
6. Lack of a right:
 - a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
 - b. in streets, alleys, or waterways that touch the Land.This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19 and 21, Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	<u>Your Deductible Amount</u>	<u>Our Maximum Dollar Limit of Liability</u>
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or \$2,500.00 (whichever is less)	\$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or \$5,000.00 (whichever is less)	\$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or \$5,000.00 (whichever is less)	\$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or \$2,500.00 (whichever is less)	\$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
 - (i) the occupancy, use, or enjoyment of the Land;
 - (ii) the character, dimensions, or location of any improvement erected on the Land;
 - (iii) the subdivision of land; or
 - (iv) environmental protection;or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
- (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
 - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
 - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
 - (c) resulting in no loss or damage to the Insured Claimant;
 - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or
 - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
 - (a) a fraudulent conveyance or fraudulent transfer, or
 - (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

[Except as provided in Schedule B - Part II, [t[or T]his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees, or expenses that arise by reason of:

[PART I

[The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.]

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:]

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
 - (i) the occupancy, use, or enjoyment of the Land;
 - (ii) the character, dimensions, or location of any improvement erected on the Land;
 - (iii) the subdivision of land; or
 - (iv) environmental protection;or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
- (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
 - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
 - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
 - (c) resulting in no loss or damage to the Insured Claimant;
 - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
 - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
 - (a) a fraudulent conveyance or fraudulent transfer; or
 - (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY - ASSESSMENTS PRIORITY (04-02-15)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
 - (i) the occupancy, use, or enjoyment of the Land;
 - (ii) the character, dimensions, or location of any improvement erected on the Land;
 - (iii) the subdivision of land; or
 - (iv) environmental protection;or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
- (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
 - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
 - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
 - (c) resulting in no loss or damage to the Insured Claimant;
 - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
 - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
 - (a) a fraudulent conveyance or fraudulent transfer, or
 - (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the filed rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for such discount. These discounts only apply to transactions involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

Not all discounts are offered by every FNF Company. The discount will only be applicable to the FNF Company as indicated by the named discount.

DISASTER LOANS (CTIC, CLTIC, FNTIC)

The charge for a Lender's Policy (Standard or Extended coverage) covering the financing or refinancing by an owner of record, within twenty-four (24) months of the date of a declaration of a disaster area by the government of the United States or the State of California on any land located in said area, which was partially or totally destroyed in the disaster, will be fifty percent (50%) of the appropriate title insurance rate.

CHURCHES OR CHARITABLE NON-PROFIT ORGANIZATIONS (CTIC, FNTIC)

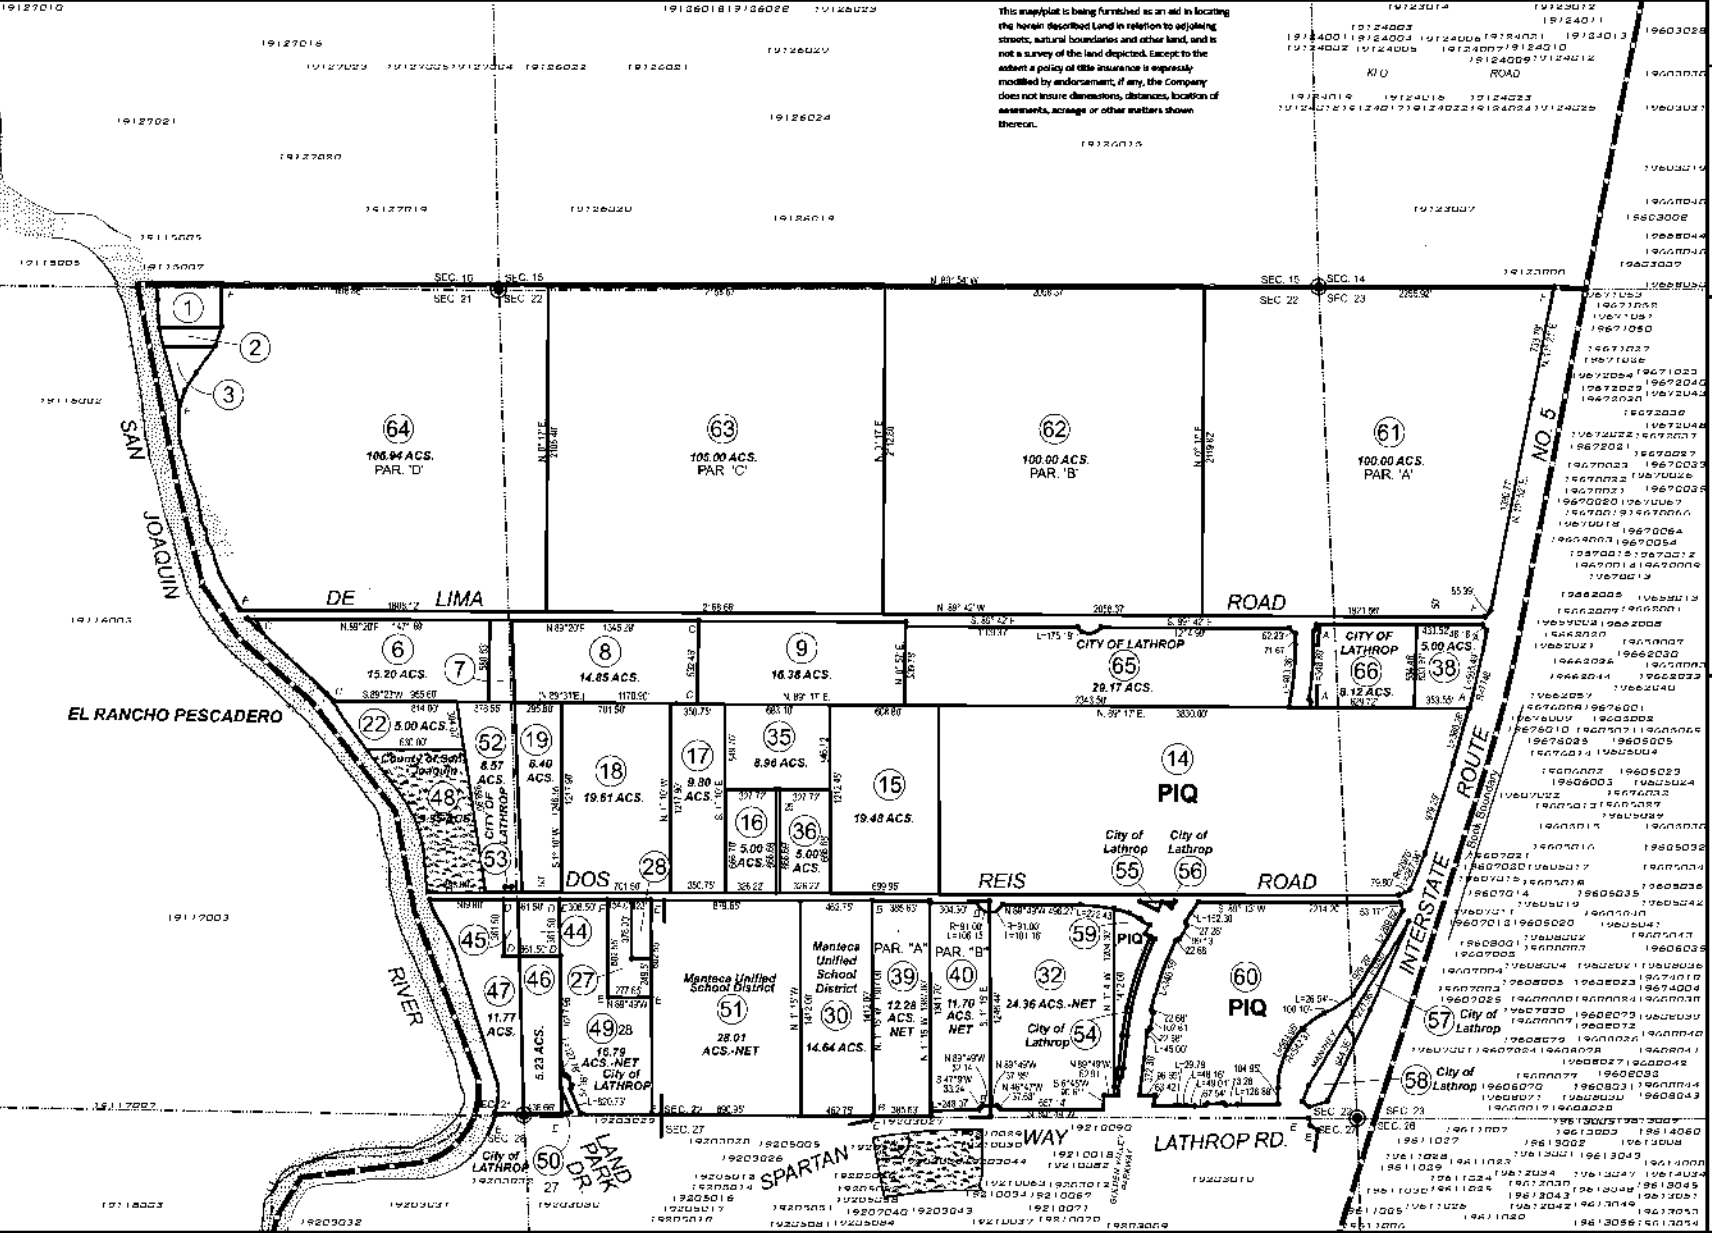

On properties used as a church or for charitable purposes within the scope of the normal activities of such entities, provided said charge is normally the church's obligation the charge for an owner's policy shall be fifty percent (50%) to seventy percent (70%) of the appropriate title insurance rate, depending on the type of coverage selected. The charge for a lender's policy shall be forty percent (40%) to fifty percent (50%) of the appropriate title insurance rate, depending on the type of coverage selected.

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

Please complete to the best of your knowledge. For those questions that are not applicable, please respond with an "N/A". For those questions that are unknown, please respond with "unknown".

1. PROPERTY INFORMATION:

Property Name: +/- 130 acres, Lathrop, CA		
Property Address: Dos Reis & Manthey Rds		
City Lathrop	State: California	Zip: 95330
Assessor's Parcel Number 191-220-14, 59, and 60		
Property Owner & Contact Information: Mike Robinson, need to get contact info		
Date Property Owner Purchased: Unknown		
Key Site Manager & Contact Information: Sean Asmus, 602-904-2756		

2. COMPLETED BY

Signature 	Date 2/22/2021
Printed Name Sean T. Asmus	Relation to Subject Property: Buyers Rep

3. PREVIOUS INVESTIGATIONS

Have any previous environmental investigations been performed at the property, including Phase I ESAs, Phase II Subsurface Investigations, Remediation, Asbestos or Lead-Based Paint surveys? _____ Unknown

4. PROPERTY DESCRIPTION

Property Size: +/- 130 ACRES Number of Building(s): 0

Size of Building(s): N/A

Date of Construction: N/A

Property Type: (please circle)

Multi-Family Hotel Mobile Home Park Retail/Commercial Industrial Office

Other: VACANT LAND

Please provide Rent Roll if Applicable.

Historical Use of Property: AGRICULTURAL

5. SURROUNDING PROPERTY USES

DIRECTION	USE
North	VACANT / AG
South	VACANT / AG
East	FREEWAY - RESIDENTIAL
West	LIGHT INDUSTRIAL

Are you aware of any potential environmental concerns associated with surrounding properties?

_____ YES NO

If yes, please describe: _____

6. UTILITIES & SERVICES

Please provide the name of the utility or contractor providing the following:

- | | |
|----------------------|----------------------------|
| Electric _____ | Bio-hazardous Waste _____ |
| Gas _____ | Elevator Maintenance _____ |
| Potable Water _____ | Used Grease _____ |
| Sanitary Sewer _____ | Hazardous Waste _____ |

7. ON SITE OPERATIONS

Are you aware of any of the following conditions, either past or present, on the property?		
Condition	Response	If yes, please describe
1. Stored Chemicals	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
2. Underground Storage Tanks	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
3. Aboveground Storage Tanks	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
4. Spills or Releases	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
5. Dump Areas/Landfills	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
6. Waste Treatment Systems	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
7. Clarifiers/Separators	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
8. Vents/Odors	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
9. Floor Drains/Sumps	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
10. Stained Soil	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
11. Electrical Transformers	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
12. Hydraulic Lifts/Elevators	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
13. Dry Cleaning Operations	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
14. Oil/Gas/Water/Monitoring Wells	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
15. Environmental Permits	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>SHARPE ARMY DEPOT</i> Cerclis ID:: 902792 EPA Id: CA8210020832	<i>700 EAST ROTH RD</i>	<i>E 1/2 - 1 (0.740 mi.)</i>	<i>0</i>	<i>10</i>

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>SHARPE ARMY DEPOT</i> EPA ID:: CA8210020832	<i>700 EAST ROTH RD</i>	<i>E 1/2 - 1 (0.740 mi.)</i>	<i>0</i>	<i>10</i>

Federal RCRA generators list

RCRA-VSQQ: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQQ list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1

EXECUTIVE SUMMARY

RCRA-VSQG site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
WALGREENS #10631 EPA ID:: CAL000327765	14780 S HARLAN RD	SE 1/8 - 1/4 (0.249 mi.)	C18	268

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/26/2020 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

SCH: This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category. depending on the level of threat to public health and safety or the. environment they pose.

A review of the SCH list, as provided by EDR, and dated 10/26/2020 has revealed that there is 1 SCH

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there is 1 SWEEPS UST site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 8 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Scoring: 2

Summary Details:

Conditions at proposal October 15, 1984): The Sharpe Army Depot covers 724 acres in a primarily rural area of San Joaquin County in north-central California, approximately 60 miles east of San Francisco, 2 miles east of the San Joaquin River, and 1.5 miles northeast of Lathrop. The site is a former U.S. Army maintenance facility. Wastes produced on-site were disposed of in multiple locations, including the South Balloon Area, the Burning Pits Area, and the North Balloon Area. These areas cover about 0.5 square mile. The wastes disposed of at the depot include sludge containing phenols and polychlorinated hydrocarbons trans-dichloroethylene, trichloroethylene, carbon tetrachloride), and used paints and solvents. The total amounts and types are unknown. The wastes have contaminated both soil and ground water, but not surface water to date. All maintenance activities have ceased, and the waste areas are no longer used. The site is located in the large plain on the valley floor, which carries several aquifers, at least one artesian. Most of the surrounding land is used for agriculture, primarily for raising row crops. The depot is participating in the Installation Restoration Program (IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from hazardous materials. The Army has completed Phase I records search) of the IRP. Status July 22, 1987): Sharpe Army Depot is sampling on-base and off-base ground water under IRP Phase II-Stage 2 confirmatory sampling). The Army has installed a facility for treating contaminated ground water in the South Balloon Area. Within the boundaries of this Federal facility, there are areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act (RCRA). However, no such areas were included in scoring this specific site. Therefore, this Federal facility site is being placed on the Federal section of the NPL under the NPL/RCRA policy announced on September 8, 1983 48 FR 40662).

Waste Description:	TETRACHLOROETHYLENE
Waste Code:	F002
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROETHANE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F005
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 02/25/2019. Copies of uniform manifests for the disposal of hazardous waste for February 2016 through February 2019 were not found on site. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. Immediately locate a copy of all manifests and receipts for the last three years, maintain them on site, and submit copies to the EHD.

Violation Description: Failure to properly manage used oil and/or fuel filters in accordance with the requirements.

Violation Notes: Returned to compliance on 03/04/2019. One black metal 55 gallon drum of drained used oil filters was observed without an accumulation start date. No disposal records were available for metal filters during the inspection. Facilities that generate up to one ton of used oil filters per year may store the filters up to one year. Facilities that generate one ton or more of used oil filters may store the filters for up to 180 days. Immediately recycle these filters under a bill of lading and submit a copy of the bill of lading to the EHD. One black metal 55 gallon drum of drained used oil filters was observed without an accumulation start date. Used oil filters shall be drained of free-flowing oil, stored in a closed, rainproof container, labeled as G drained used oil filters, G and marked with an accumulation start date. Immediately mark the date and ensure that all used oil filters are managed in this way. Bills of lading for the recycling of used oil filters for the last three years were not found on site. A copy

Site Name: JH Motorsports Inc
Violation Date: 02-07-2019
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 03/04/2019. One blue metal 55 gallon drum of used antifreeze was observed with an accumulation start date of 7/8/2018. One black metal 55 gallon drum of used paper filters was observed without an accumulation start date. No disposal records for antifreeze or paper filters were available during the inspection. Facilities who generate less than 1000 kg of hazardous waste per month and do not exceed 6000 kg of waste stored on site at any time may store waste on site up to 180 days. Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the EHD.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violations:
Site ID: 163962
Site Name: TWO GUYS FOOD & FUEL
Violation Date: 07-08-2015
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Description: Failure to annually review and electronically certify that the business plan is complete, accurate, and up-to-date.
Violation Notes: Returned to compliance on 07/22/2015. The business plan is incomplete because the site map needs more detail and the inventory is incorrect. The business plan information needs to be reviewed and resubmitted in the California Environmental Reporting System (CERS) annually. The hazardous materials inventory shall be submitted by January 15 of each calendar year and may be submitted beginning November 1 of the previous year. Immediately log into the CERS at <http://cers.calepa.ca.gov/>, enter the correct or updated information, and submit to the EHD for approval.

Citation: HSC 6.75 25299.30-25299.34 - California Health and Safety Code, Chapter 6.75, Section(s) 25299.30-25299.34
Violation Description: Failure to submit and maintain complete and current Certification of Financial Responsibility or other mechanism of financial assurance.
Violation Notes: Returned to compliance on 06/09/2016. Financial responsibility documents currently have indicated financial responsibility in the amount of 500,000 dollars per occurrence; this needs to be changed to one million dollars per occurrence. Current financial responsibility documents are required to be submitted annually. Immediately log into the California Environmental Reporting System (CERS) at

Site Name: TWO GUYS FOOD & FUEL
Violation Date: 06-11-2019
Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: Returned to compliance on 06/13/2019. On the 1/21/19 and 2/21/19 designated operator (DO) inspection report under - Section III The DO failed to add a description to all the components marked N/A or N from section VII through XI. Furthermore the DO did not conduct an inspection with 30 days of the previous inspection. The DO inspected the facility on 12/19/18 and on 1/21/18. The DO report was conducted 33 days after the 12/19/18 inspection. During the designated operator inspection, the designated operator shall review the alarm history for the previous month, check that each alarm was documented and responded to appropriately, and attach a copy of the alarm history with documentation taken in response to any alarms to the monthly report. Ensure that designated operators performing inspections at least once every 30 days at this facility and are including all of the required information on the reports.

Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been properly trained.

Violation Notes: Returned to compliance on 06/09/2016. The designated operator marked N/A (not applicable) for "Has each alarm for the previous month been responded to appropriately" on the January 22, 2016 designated operator monthly inspection report. This was not appropriate since there was a fuel alarm on January 17, 2016 for L1 at dispenser 1-2 that the designated operator did address in the January 22, 2016 and February 26, 2016 designated operator monthly inspection report. Also, the designated operator addressed the February 18, 2016 high product alarm for T1 (product 87) in the March 30, 2016 designated operator monthly report instead of the February 26, 2016 designated operator monthly report. During the monthly inspection, the designated operator shall check that all required testing and maintenance for the UST system have been completed and document the dates they were done. Ensure that designated operators performing monthly inspections at this facility are including all of the required information on the reports. [Truncated]

Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)

Violation Description: Failure of the functional line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements: Monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour leak at 10 pounds per square inch and restrict or shut off the flow of product through the piping when a leak is detected.

Violation Notes: Returned to compliance on 06/11/2019. The 87 product line leak detector failed to detect a leak when tested. All line leak detectors shall be capable of detecting a 3-gallon per hour leak at 10 psi. The leak detector was replaced and retested during the inspection. A G UST Retrofit Verification with Inspector Already OnsiteG form has been completed and provided to the operator and contractor. This was corrected on site.

beneath "Under Dispenser Containment (UDC) Monitoring), change "Leak Within Secondary Containment of UDC Causes Audible and Visual Alarms" from "Yes" to "No" for all three tanks. The monitoring plan must be uploaded to the California Environmental Reporting System (CERS). Immediately log into CERS, make the necessary changes, and submit for review by the EHD. This was corrected on site.

Violation Division: San Joaquin County Environmental Health
Violation Program: UST
Violation Source: CERS

Site ID: 163962
Site Name: TWO GUYS FOOD & FUEL
Violation Date: 06-08-2017
Citation: 23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)

Violation Description: Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been properly trained.

Violation Notes: Returned to compliance on 06/15/2017. The designated operator failed to provide the alarm history for the L6 sensor in the 87-product submersible turbine pump sump during the July 22, 2016 designated operator monthly inspection report. During the monthly inspection, the designated operator shall review the alarm history for the previous month, check that each alarm was documented and responded to appropriately, and attach a copy of the alarm history with documentation taken in response to any alarms to the monthly report. Ensure that designated operators performing monthly inspections at this facility are including all of the required information on the reports.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-11-2020
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: The monitoring system certification was conducted on 6/11/2020 and the paperwork inspection completed today (6/23/2020). An inspection checklist was provided to the facility operator on the day of inspection. The EHD has written the complete report which replaces the initial checklist. Complete and submit a copy of the Return to Compliance Certification form to the EHD with a statement documenting the corrective actions that have been or will be taken for each violation, and any supporting paperwork, by 07/23/2020. . To minimize person to person contact EHD is choosing to write the name of person receiving the report instead of having them sign. Starting September 1, 2018, all in-office CERS help will be provided at EHD hourly rate (\$152). To schedule an appointment, please call (209) 468-3420. Documents provided during inspection: Return to compliance certification form and corrective action form.

was performed on 1/29/2015 and a test report was submitted past 30 days. A copy of the test report must be submitted within 30 days of the tests. Take all necessary precautions to ensure testing and submittal of test reports are performed in a timely manner.

Violation Division: San Joaquin County Environmental Health
Violation Program: UST
Violation Source: CERS

Site ID: 396320
Site Name: LATHROP GAS & FOOD INC
Violation Date: 12-12-2016
Citation: 23 CCR 16 2636(f)(5) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(5)

Violation Description: "Failure to meet one or more of the following monitoring requirements in lieu of the requirement to be tightness tested annually: The monitoring system maintains all product piping outside the dispenser to be fail-safe and shut down the pump when a leak is detected. The monitoring system shuts down the pump or stops flow when a leak is detected in the under dispenser containment (UDC)."

Violation Notes: Returned to compliance on 12/12/2016. The Bravo box floats and chains in the under dispenser containment (UDC) 5/6 (91-product) and 11/12 (87-, 91-, and diesel-product) failed to stop the flow of product at the dispenser when tested. All monitoring equipment shall be maintained to activate an audible and visual alarm or stop the flow of product at the dispenser when it detects a leak. The service technician adjusted the floats and chains and verified functionality. This was corrected on site.

Violation Division: San Joaquin County Environmental Health

Site ID: 396320
Site Name: LATHROP GAS & FOOD INC
Violation Date: 12-11-2017
Citation: HSC 6.7 Multiple - California Health and Safety Code, Chapter 6.7, Section(s) Multiple

Violation Description: UST Program -General - Must include violation description, proper statute and regulation citation in the "comment" section.

Violation Notes: Returned to compliance on 12/11/2017. Liquid was observed in the dispenser 11/12 and 9/10 under dispenser containment sump. If water could enter into the secondary containment by precipitation or infiltration, it must be removed and disposed of properly. Immediately remove this liquid, make a hazardous waste determination per Title 22 hazardous waste regulations, and manage it accordingly. Ensure that the under dispenser containment in dispenser 11/12 and 9/10 is maintained free of liquid. Technician removed liquid from the under dispenser containment from dispenser 9/10 and 11/12 after he tested the floats and chains. This was corrected on site.

Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)

Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violation Notes: Returned to compliance on 12/11/2020. OBSERVATION: The designated operator failed to check and note all required items on the visual inspection reports: - The G NAG in sections VII through XI were not fully explained on the inspection reports. -Tank and line tightness test information was left blank. REGULATION GUIDANCE: During the visual inspection, the designated operator shall check that all required testing and maintenance for the UST system have been completed and shall check all required items on the report. CORRECTIVE ACTION: Ensure that designated operators performing visual inspections at this facility are including all of the required information on the reports.

Citation: 23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Description: Failure of the double wall pressurized piping in the turbine sump to be continuously monitored with a system that activates an audible and visual alarm or restricts or stops flow at dispenser when a leak is detected.
Violation Notes: Returned to compliance on 12/09/2015. The Bravo box floats and chains in the UDC sumps 1/2 (center), 3/4 (south), 7/8 (south), 9/10 (center), and 11/12 (center) failed to stop the flow of product at the dispenser when tested. All monitoring equipment shall be maintained to activate an audible and visual alarm or stop the flow of product at the dispenser when it detects a leak. The service technician adjusted the floats and chains and verified functionality. According to Nick with Affordatest, a two-inch socket was laying in the UDC 1/2 over the float, which was preventing it from rising. The socket was removed at the time of inspection.

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 06/08/2017. A metal can of hazardous waste solids was observed in the storage room with no hazardous property or physical state. All hazardous waste containers shall be marked with the following information: - the words G Hazardous WasteG - name and address of generator - hazardous properties (ignitable, corrosive, reactive, toxic) - physical state (liquid, solid) - composition (contents) - accumulation start date Immediately label this container and ensure that all hazardous waste containers are marked with all the required information.

Violation Description: Failure of a generator of hazardous waste that meets the conditions to be transported on a consolidated manifest to comply with one or more of the required consolidated manifesting procedures.

Violation Notes: Returned to compliance on 06/08/2017. 30 gallons of fuel contaminate water was disposed of as "oily water" using a consolidated manifesting procedure on 11/30/15. Disposal using a consolidated manifesting procedure is not eligible for this waste. The consolidated manifesting procedure may be used if the generator does not generate more than 1000 kilograms per month of hazardous waste (excluding used oil and oil/water separator waste) and only for the following waste streams: - used oil - contents of an oil/water separator - solids contaminated with used oil - brake fluid - antifreeze - antifreeze sludge - parts cleaning solvents, including aqueous cleaning solvents - hydroxide sludge contaminated solely with metals from a wastewater treatment process - "paint-related" wastes, including paints, thinners, filters, and sludges - spent photographic solutions - dry cleaning solvents (including perchloroethylene, naphtha, and silicone based solvents) - filters, lint, [Truncated]

Citation: 23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Description: Failure of the double-walled pressurized piping to be continuously monitored with a system that activates an audible and visual alarm or stops flow at the dispenser when a leak is detected.
Violation Notes: Returned to compliance on 12/11/2017. The floats and chains in dispensers 11/12, 5/6, 7/8, and 3/4 for the 87 product line failed to activate an audible and visual alarm when tested to ensure continuous monitoring of the tank system. All monitoring equipment shall be maintained to activate an audible and visual alarm or stop the flow of product at the dispenser when it detects a leak. The technician adjusted and cleaned the floats and chains in the above dispensers. He retested the floats and chain and verified functionality. This was corrected on site.

Violation Date: 12-09-2015
Citation: 23 CCR 16 2715 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715

Violation Description: Failure to comply with one or more of the designated operator monthly inspection requirements: failed to inspect the monthly alarm history report; attach a copy of the alarm history; failed to inspect for the presence of liquid or debris in the spill container/spill bucket and under dispenser containment; failed to inspect the under dispenser containment to ensure that monitoring equipment is placed in the proper position; failure to inspect for liquid or debris in the containment sump where an alarm occurred or for which there is no record of a service visit; or failure to check that all testing and maintenance has been completed and documented.

Violation Notes: Returned to compliance on 12/14/2015. The designated operator failed to check and note the correct test dates for the secondary containment tests on the designated operator monthly inspection reports starting in February 2015. The triennial secondary containment testing was conducted on January 29, 2015. The test date marked is January 6, 2014, which was for testing of the 91 piping and UDC 11/12 only. During the monthly inspection, the designated operator shall check that all required testing and maintenance for the UST system have been completed and document the dates they were done. Ensure that designated operators performing monthly inspections at this facility are including all of the required information on the reports.

Citation: HSC 6.7 25291(a)(1) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(a)(1)

Violation Description: Failure to construct, operate, and maintain primary containment as product-tight.

Violation Notes: Returned to compliance on 12/12/2016. Leaking was noted below the shear valves in under dispenser containment (UDC) 1/2, 5/6, 9/10, and 11/12 and filters appeared to be leaking in UDC 9/10 and 11/12 allowing for oily debris to accumulate in the UDCs and indicating a leak in the primary piping. All primary containment for the UST system must be tight. The service technician removed the leaking product and tightened the filters. If the seepage reappears, immediately have a properly licensed, trained, and certified contractor repair or replace the failed component. This was corrected on site.

percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, - 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1, - 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 12/11/2018. Owners or operators of underground storage tanks that do not meet California Code of regulations, title 23 division 3, chapter 16 section 2635(c)(2) shall test overfill prevention equipment once by October 13th, 2018 and every 36 months thereafter; and within 30 days of the date of a repair. The site did not performed the testing by October 13th, 2018. The service technicians on site performed the inspection today (12/11/18) with passing results to correct this on site. Ensure to conduct overfill prevention equipment inspection within the time frame provided by the regulation and submit test results within 30 days of performing the inspection. Ensure a 48 hour notification is provided to EHD prior to conducting the inspection. This was corrected on site.

Eval Notes: Complete and submit a copy of the Return to Compliance Certification form to the Environmental Health Department (EHD) with a statement documenting the corrective actions that have been or will be taken for each violation, and any supporting paperwork, by January 11, 2017. Please be aware that as of January 1, 2014, facility operators are required to upload the following UST program documents into the California Environmental Reporting System (CERS): UST Monitoring Site Plan, UST Certification of Financial Responsibility, UST Response Plan, UST Letter from Chief Financial Officer (if applicable), and the Owner Statement of Designated Operator Compliance. The UST Owner/Operator: Written Agreement, if applicable, can be stored at the facility or uploaded into CERS.

investigation began in November 1998. Many phases of work have been performed and the MTBE plume has spread over most of the 3.77 acre site north of this site. The groundwater flow was to the northeast and now is to the northwest so the MTBE plume may extend beneath I-5. Remediation has not shown to be cost effective over the years. Concentrations of MTBE continue to decline through natural attenuation. Concurrence on a determination of no further action required was received from the RWQCB on 12/17/09; NFA issued 4/23/10.

RB Case Number: 391176
Local Agency: Not reported
File Location: Not reported
Local Case Number: 0001865
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: Two underground storage tanks were found in a sidewalk and planter area during development of the property in April 2007. Preliminary soil and groundwater data indicated groundwater may be contaminated. Three monitoring wells were installed. Low levels of TPH have been found and it has been determined that the case can be closed. Destruction of the monitoring wells is pending.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/11/2001
Comments: DTSC approved the Preliminary Endangerment Assessment (PEA). Based on the information presented in the PEA, neither an actual a potential release of hazardous material, nor the presence of naturally occurring hazardous material indicated a the site pose threat to human health or the environment under any land use. Therefore, DTSC concurred that no further environmental investigation or cleanup was required at this site, and approved the PEA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 01/06/2000
Comments: Phase 1- Pursuant to an agreement between the Department of Toxic Substances Control (DTSC) and the California Department of Education, DTSC's Site Mitigation Program completed a review of a Phase I Environmental Assessment and has determined that a Preliminary Endangerment Assessment is required. The PEA will be conducted under DTSC's oversight pursuant to agreements between DTSC and the pertinent school district. Any subsequent cleanup activities (if needed) after the PEA would be conducted pursuant to agreements between DTSC and the Manteca Unified School District.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/30/2020	Source: EPA
Date Data Arrived at EDR: 01/14/2021	Telephone: N/A
Date Made Active in Reports: 02/09/2021	Last EDR Contact: 01/14/2021
Number of Days to Update: 26	Next Scheduled EDR Contact: 04/12/2021
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/30/2020

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 12/30/2020	Source: EPA

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/14/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/17/2020	Telephone: (415) 495-8895

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/14/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/17/2020	Telephone: (415) 495-8895

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/14/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/17/2020	Telephone: (415) 495-8895

Number of Days to Update: 5	Next Scheduled EDR Contact: 04/05/2021
	Data Release Frequency: Quarterly

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/14/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/17/2020	Telephone: (415) 495-8895

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 11/11/2020	Source: Department of the Navy
Date Data Arrived at EDR: 11/17/2020	Telephone: 843-820-7326
Date Made Active in Reports: 02/09/2021	Last EDR Contact: 02/08/2021
Number of Days to Update: 84	Next Scheduled EDR Contact: 05/24/2021
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 10/28/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/05/2020	Telephone: 703-603-0695
Date Made Active in Reports: 11/18/2020	Last EDR Contact: 11/05/2020
Number of Days to Update: 13	Next Scheduled EDR Contact: 03/08/2021
	Data Release Frequency: Varies

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 10/28/2020	Source: Environmental Protection Agency

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 03/18/2020

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

USGS TOPOGRAPHIC MAP

Target Property Map:	5640064 LATHROP, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

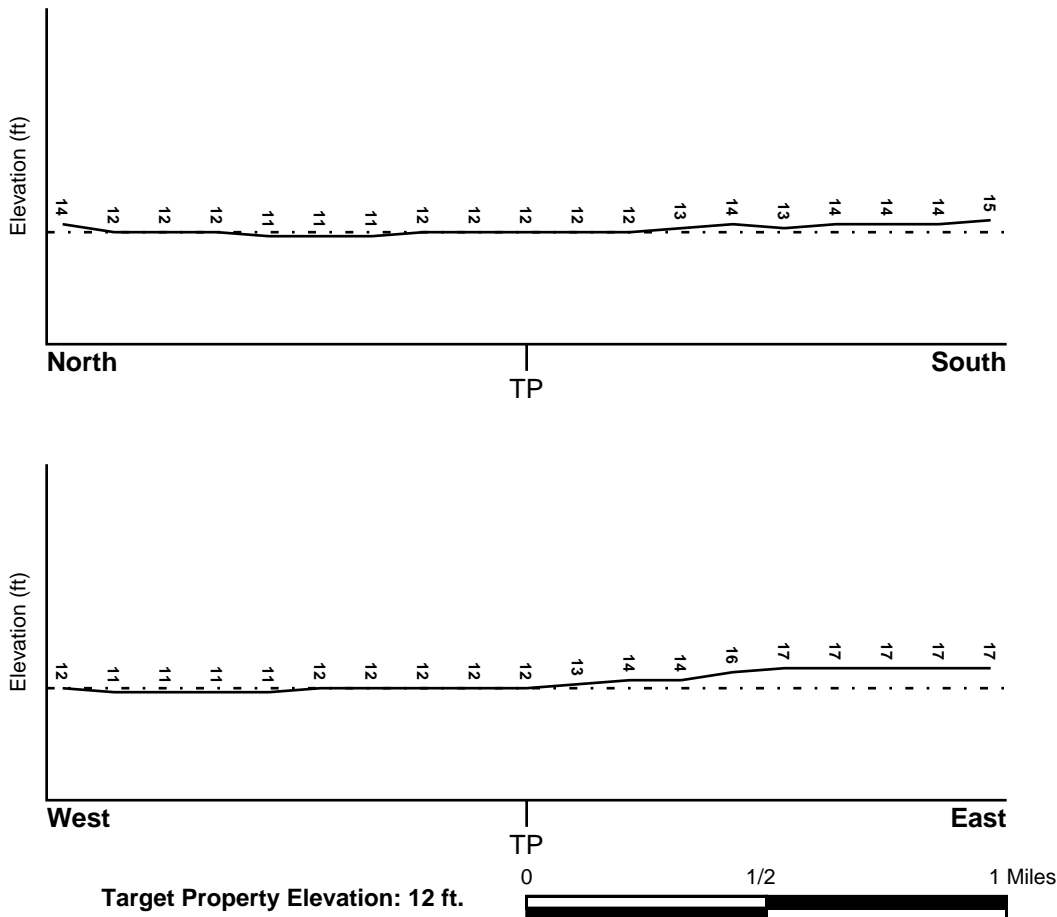

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
Not Reported	

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
LATHROP	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

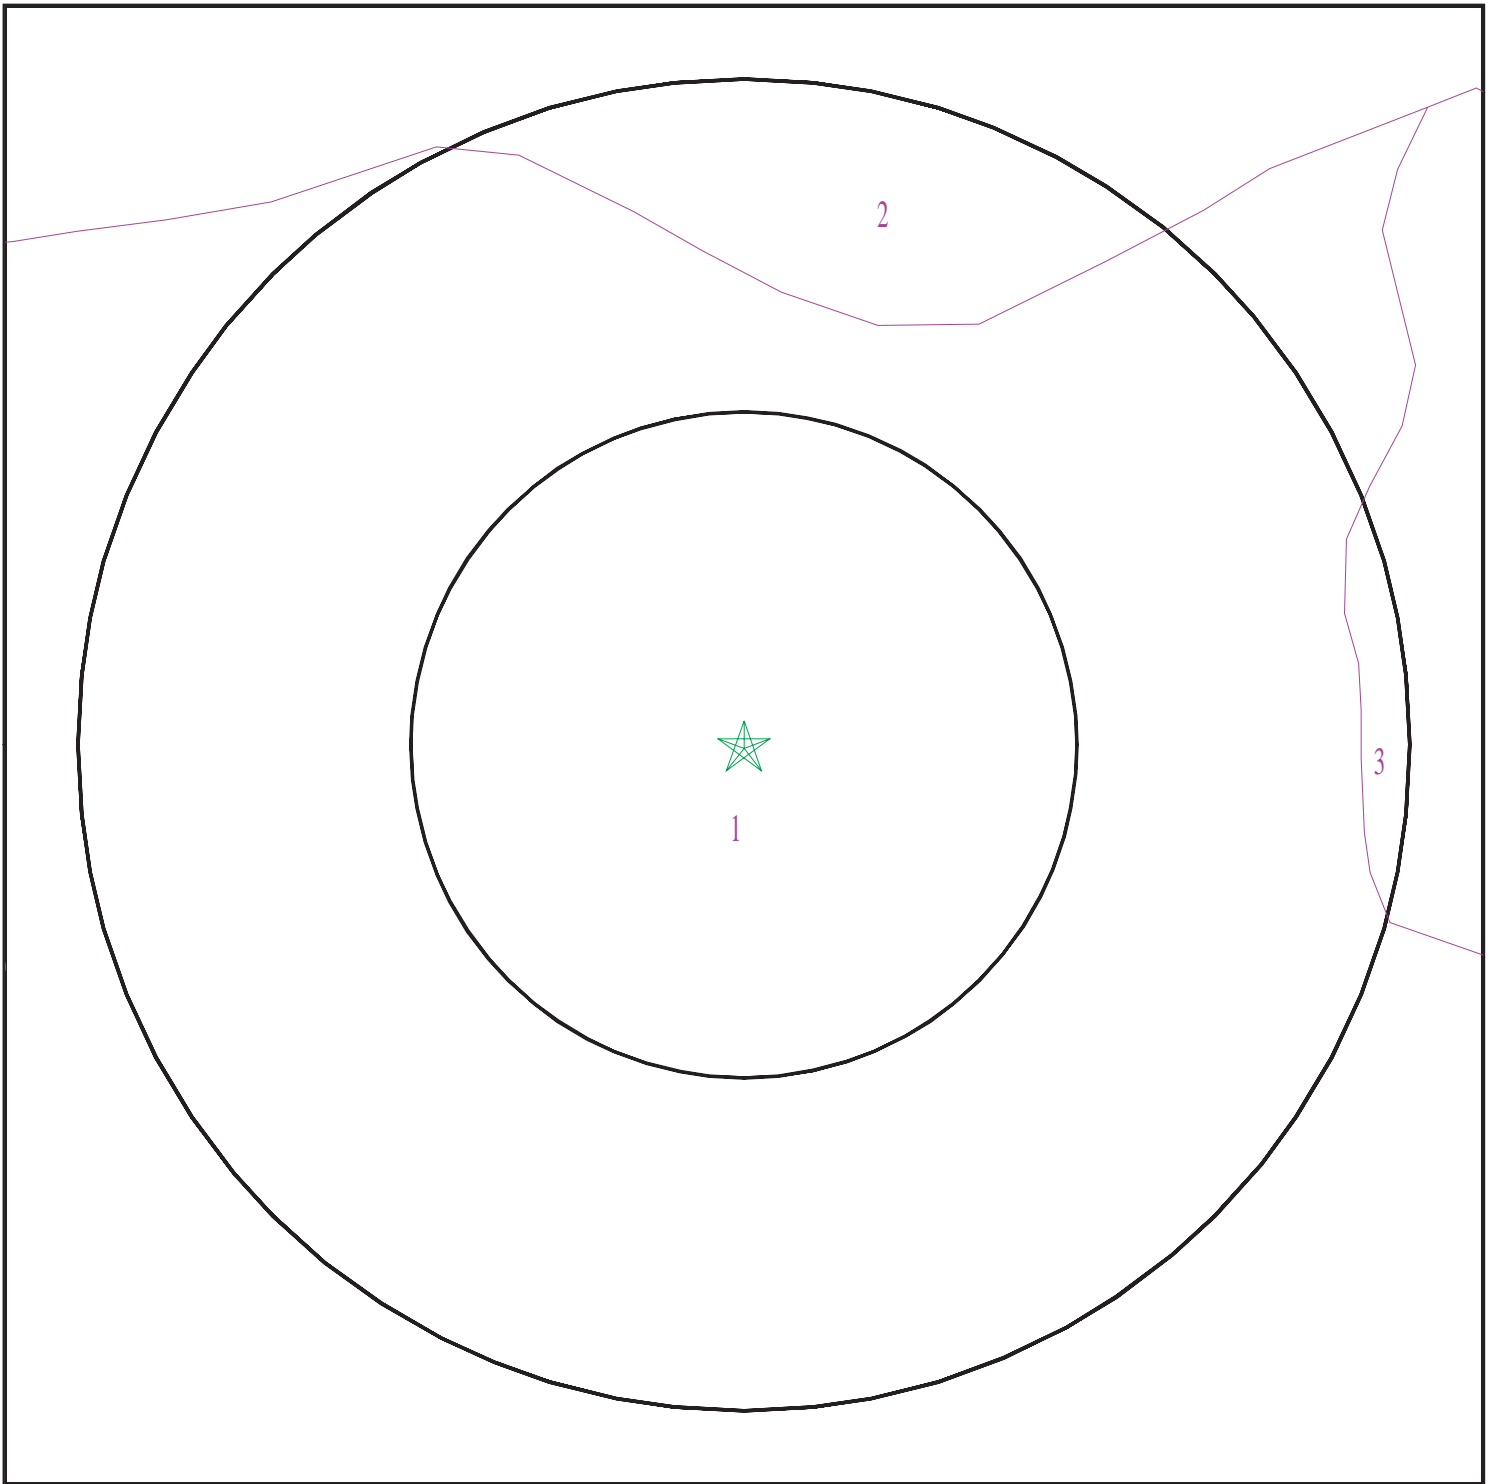

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: TINNIN

Soil Surface Texture: loamy coarse sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	27 inches	loamy coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 6.6
2	27 inches	53 inches	loamy coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 6.6
3	53 inches	74 inches	loamy coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: VERITAS

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	14 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.01 Min: 0	Max: Min:
2	14 inches	53 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.01 Min: 0	Max: Min:
3	53 inches	70 inches	cemented	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.01 Min: 0	Max: Min:

Soil Map ID: 3

Soil Component Name: TIMOR

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Moderately well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	14 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	Not reported	Max: 0 Min: 0	Max: Min:
2	14 inches	55 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	Not reported	Max: 0 Min: 0	Max: Min:
3	55 inches	59 inches	cemented	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	Not reported	Max: 0 Min: 0	Max: Min:

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX D: QUALIFICATIONS/INSURANCE

Education

BA, Environmental Studies, University of California at Santa Barbara
MBA, Finance and Marketing, Santa Clara University, Leavey School of Business, Santa Clara, CA

Registrations

AHERA Asbestos Building Inspection Certification, State of California

Highlights

24 years of experience in the environmental consulting/real estate due diligence industries
19 years performing Phase Environmental Site Assessments; Transaction Screen Assessments; Environmental Desktop Reports; Asbestos Surveys; HUD Phase I Environmental Site Assessments; Freddie Mac and Fannie Mae Phase I Environmental Site Assessments; and Radon Testing

Experience Summary

Beginning in the early 1990s, Mr. Olsen worked for various San Jose based environmental firms as a research analyst, gathering government agency, historical research and geologic information utilized in ESAs. In the late 1990s through early 2000s he managed the day-to-day operations of a team of research analyst and GIS related research and projects. From the early 2000s through the present, Mr. Olsen has been conducting and performing Phase I ESAs and subsurface investigations for various national environmental consulting firms.

Project Experience

Westfield Oakridge Shopping Mall. Mr. Olsen conducted a Phase I Environmental Site Assessments on a 1.2 million square foot Westfield Shoppingtown mall (Oakridge Mall, San Jose, California)

Humboldt Redwood Company. Mr. Olsen conducted a Phase I Environmental Site Assessments on a 660-acre Humboldt Redwood Company lumber mill, co-generation plant and maintenance facility, along with 207,000 acres of timberland (Scotia, California)

Talavera. Mr. Olsen conducted a Freddie Mac Phase I Environmental Site Assessments on a 350-unit multi-family residential apartment facility (Las Vegas, Nevada)

Automobile Dealership Portfolio. Mr. Olsen recently conducted seven (7) Phase I Environmental Site Assessments on automobile dealerships/service facilities (San Jose, Newark, Pleasanton, Colma and Hayward, California)

Greka Energy. Mr. Olsen conducted a Phase I Environmental Site Assessment on an asphalt and crude oil refinery (Santa Maria, California)

Education

Bachelor of Arts in Biological Sciences and Minor in Energy and Water Sustainability, Rice University, Houston, TX

Training

24 Hour Asbestos Training Course

Highlights

5+ years performing environmental due diligence assessments
Phase I Environmental Site Assessments
HUD Phase I Environmental Site Assessments
Transaction Screen Assessments
Environmental Desktop Reports
Limited Naturally Occurring Radioactive Material (NORM) Surveys

Experience Summary

Ms. Plymell currently holds the role of a Project Assessor and her responsibilities include thorough site assessment and technical report writing in line with the American Society of Testing and Materials (ASTM) standard and US Environmental Protection Agency's All Appropriate Inquiry (AAI), as well as customized client formats. In addition, Ms. Plymell performs limited asbestos surveys and radon testing as required per scope of work.

Ms. Plymell has worked on numerous large scope projects located throughout the Houston Area and surrounding cities with known historical environmental concerns. Ms. Plymell works closely with state and local regulatory agencies to obtain environmentally significant documents regarding current and former underground storage tanks, subsurface investigations performed onsite, current or former dry cleaning facilities, and more. Ms. Plymell is persistent, timely as well as client conscientious.

Ms. Plymell has worked on numerous sites occupied by machine shops, auto repair facilities, car dealerships, manufacturing plants, distribution facilities, and commercial strip centers. Her knowledge of the due diligence industry is a proven asset in identifying potential environmental hazards.

Ms. Plymell is Freddie Mac Qualified to do Phase I Environmental Site Assessments (ESA).

Project Experience

Ms. Plymell has over five years of experience performing due diligence assessments for a variety of property types including multi-family residences, commercial office buildings, retail shopping centers, machine shops, auto repair facilities, distribution facilities, and more. For each assessment she performs, she reviews the condition of the building structure and systems and develops a thorough report.

Two Business Parks, San Antonio, Texas. Ms. Plymell performed a Phase I Environmental Site Assessment on a 20-acre business park constructed on a landfill with a methane recovery system and onsite monitoring wells.

The Sam Houston Hotel, Houston, Texas. Ms. Plymell performed a Phase I Environmental Assessment on a full service hotel with 100 guest rooms located in the heart of historic Downtown Houston.

Steel Fabrication Facilities, Splendora, Texas and Elmendorf, Texas. Ms. Plymell performed Phase I Environmental Site Assessments on active industrial steel fabrication facilities.

Crude Transloading, Rail Car Storage, and Frac Sand Storage, New Town, North Dakota. Ms. Plymell performed Phase I Environmental Site Assessment on a 200-acre site with crude oil transloading (18-wheeler and pipeline to rail), clean fracturing (frac) sand transloading (rail to 18-wheeler), and rail car storage on railroad spurs.

RV Resort, etc., Elmendorf, Texas. Ms. Plymell performed a Phase I Environmental Site Assessment on a 50+ acre site which consisted of a RV Resort with associated buildings, community center, small business park, event space, and RV and Boat Storage.

Pipe Yard, Bryan, Texas. Ms. Plymell performed a client-specific environmental site assessment called an Exit Audit and limited NORM survey on an active pipe yard.

Multi-Family Apartment Complexes, Houston, Texas. Ms. Plymell performed Environmental Site Assessments on two 1,000+ unit apartment complexes.

Formerly Single-Family Residential, Houston, Texas. Ms. Plymell performed a HUD Phase I Environmental Site Assessment on lot with a vacant single-family residence.

Over 11 years in the environmental and engineering consulting industry

Principal of Partner Engineering and Science, Inc. (Partner)

Client Manager at Partner Engineering and Science, Inc. (Partner)

Experience Summary

Mr. Chang currently serves as a Client Manager for Partner providing solutions to clients' due diligence and engineering needs. He is responsible for account development and management and for ensuring consistency, quality, and on-time delivery of due diligence and engineering services provided by Partner. Mr. Chang has extensive experience managing all aspects of due diligence, specializing in environmental and engineering due diligence, for nationwide and local clients such as:

- Residential Developers
- Commercial Developers
- Mortgage Brokers
- Real Estate Brokers
- Individual Property Owners and Buyers
- Institutional Investors
- REITS
- Financial Institutions including:
 - Portfolio Lenders
 - SBA Lenders
 - HUD Lenders
 - Fannie Mae Lenders
 - Freddie Mac Lenders
 - Private Equity Funds
 - Insurance Lenders

Mr. Chang has been personally involved in the details of over 5,000 real estate transactions for various client types and therefore understands the specific needs and scopes of work required for the different parties involved in the transaction. Mr. Chang has served as an environmental scientist, project manager, senior author, or client manager for projects associated with thousands of real estate transactions. Mr. Chang is familiar with the due diligence requirements of a varied number of reporting standards, including the current standard ASTM E1527-13, EPA's All Appropriate Inquiry (AAI). Mr. Chang has extensive knowledge of the specialized requirements of Fannie Mae and Freddie Mac. He also has experience with fulfilling and designing numerous customized client scopes of work including institutional level assessments.

Mr. Chang's due diligence resume includes experience at all levels, advising lenders and real estate investors through the following product types:

- Phase I Environmental Site Assessments
- Phase II Subsurface Investigations
- Phase III Site Characterizations
- Remedial Cost Estimates
- Remediation Design and Implementation
- Environmental Transaction Screens
- Property Condition Assessments
- Probable Maximum Loss Assessments
- Property Condition Evaluations
- Industrial Hygiene Evaluations

Specifically, Mr. Chang has performed Phase I Environmental Site Assessments, Environmental Transaction Screens, Phase II and III Subsurface Investigations, Underground Storage Tank Removals, Property Condition Assessments (PCAs), Small Loan PCAs, Regulatory Compliance Assessments, Asbestos Surveys, Lead-based Paint Surveys, Radon Studies, Mold Assessments and Lead-in-water sampling and analysis.

Project Experience

Confidential Investor, Various Locations, South Eastern United States. Client Manager for Phase I ESAs and Property Condition Assessments for the acquisition of a 62-building office portfolio that included 6.9 MM square feet for over \$1 Billion.

Confidential Auto Repair Client, Various Locations, United States. Project Manager and Senior Reviewer for Phase I ESAs of an acquisition of 66 automotive repair facilities across the United States.

Plum Creek Timberland, Eastern North Carolina. Conducted site reconnaissance, aerial photograph review, regulatory agency database review, meeting with owner's representatives, historical research, and report preparation for approximately 55,000 acres of timberland located throughout eastern North Carolina using the ASTM E 2247-02 Standard.

Confidential Client, Marion, North Carolina. Project Manager and site assessor for a Phase I ESA and Compliance Audit for an approximately 70,000 square foot metal plating facility.

Equity Office Portfolio, Various Locations, United States. Site assessor for equity-level PCAs of 13 office buildings in Colorado and California ranging from four- to 16-stories and associated parking garages. The buildings contained a total of approximately 2.9 million square feet of office and support space. The assessments included the use of specialists including mechanical and electrical engineers.

Genworth Financial, Various Locations, United States. Site assessor for numerous commercial properties including: office buildings, apartments, shopping centers, restaurants, and warehouses ranging in-size from 3,000 square feet to greater than 100,000 square feet.

Dry-Cleaning Solvent Clean-up Act Program, North Carolina. Project manager for DENR enforced assessment of VOC-affected groundwater beneath Dry Cleaning sites within the state of North Carolina.

Projects have involved both soil and groundwater assessment activities to define onsite soil source areas and onsite/offsite groundwater plumes. Activities are currently ongoing.

Asbestos Surveys, Various Locations. Conducted bulk sample collection, report preparation and abatement oversight for private and municipal clients in North Carolina and South Carolina.

SPCC Plans, Various Locations. Conducted site reconnaissance and report preparation of multiple spill prevention control and countermeasure (SPCC) plans for government and industrial clients. Additionally, prepared and conducted initial training session for SPCC plans.

Environmental Compliance, Various Locations. Conducted environmental compliance audits, prepared waste stream determination profiles, and updated environmental compliance manuals with federal, state and local regulations for terminal trucking facilities throughout the east coast. Managed Environmental, Health and Safety audits at facilities throughout the US. Managed the preparation of SWPPPs, submittal of NOIs, and certificate of no exposures throughout the southeast.

Petroleum Impacted Sites, Various Locations. Remedial activities on petroleum impacted sites including refineries, bulk storage plants, and retail stations. Activities include; remediation system installation and O&M, monitor well installation, underground storage tank removal, and other tasks.

Subject: Shallow Soil Investigation Report
APNs 192-020-140-000, 192-020-590-000, and 192-020-600-000
Lathrop, California 95330
Partner Project Number: 21-308862.2

Dear Mr. Asmus:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the assessment performed at the above-referenced property. The following report describes the field activities, methods, and findings of the Shallow Soil Investigation conducted at the above-referenced property.

This assessment was performed consistent with acceptable industry standards. The independent conclusions represent Partner's best professional judgment based upon existing conditions and the information and data available to us during the course of this assignment.

We appreciate the opportunity to provide these services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact Michael Chang at (704) 994-8423.

Sincerely,

Partner Engineering and Science, Inc.

Appendix	A. Laboratory Analytical Report

1.0 INTRODUCTION

1.1 Purpose

The purpose of the investigation was to evaluate the potential impact of organochlorine pesticides (OCPs), arsenic, and/or lead to shallow soil as a consequence of a release or releases from historical on-site agricultural-related uses. HMC Construction, Inc. provided project authorization of Partner Proposal Number P21-308862.2.

1.2 Limitations

This report presents a summary of work conducted by Partner. The work includes observations of site conditions encountered and the analytical results provided by an independent third-party laboratory of samples collected during the course of the project. The number and location of samples were selected to provide the required information. It cannot be assumed that the limited available data are representative of subsurface conditions in areas not sampled.

Conclusions and/or recommendations are based on the observations, laboratory analyses, and the governing regulations. Conclusions and/or recommendations beyond those stated and reported herein should not be inferred from this document.

Partner warrants that the environmental consulting services contained herein were accomplished in accordance with generally accepted practices in the environmental engineering, geology, and hydrogeology fields that existed at the time and location of work. No other warranties are implied or expressed.

1.3 User Reliance

Partner was engaged by HMC Construction, Inc. (the Addressee), or their authorized representative, to perform this investigation. The engagement agreement specifically states the scope and purpose of the investigation, as well as the contractual obligations and limitations of both parties. This report and the information therein, are for the exclusive use of the Addressee. This report has no other purpose and may not be relied upon, or used, by any other person or entity without the written consent of Partner. Third parties that obtain this report, or the information therein, shall have no rights of recourse or recovery against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, the Addressee and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such use. Unauthorized use of this report shall constitute acceptance of, and commitment to, these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted Partner's standard Terms and Conditions, a copy of which can be found at <http://www.partneresi.com/terms-and-conditions.php>.

2.0 SITE BACKGROUND

2.1 Site Description

The subject property consists of three parcels of land comprising 126.29 acres located on the north side of Spartan Way, east and west sides of Golden Valley Parkway, west side of Manthey Road, and north and south sides of Don Reis Road within a mixed residential, commercial, and agricultural area of Lathrop, San Joaquin County, California. The subject property is currently vacant land with no on-site operations and no permanent structures. Soil piles, wood piles, and agricultural equipment exists on the subject property.

The subject property is bound by agricultural properties to the north, commercial properties to the east across South Manthey Road and Highway 5, residential and agricultural properties to the south across Spartan Way, and commercial and agricultural properties to the west. Refer to Figure 1 for a site vicinity map showing site features and surrounding properties.

2.2 Site History

Partner completed a *Draft Phase I Environmental Site Assessment Report* (Phase I) for the subject property, dated March 8, 2021, on behalf of Hodgdon Group Realty, Inc. According to the reviewed historical sources, the subject property was formerly developed with a residential-type building, outbuildings, and agricultural land from at least 1915 to 1968; agricultural land from at least 1975 to 1993; agricultural land and vacant cleared land *circa* 2006; and vacant land since at least 2009.

The subject property has been used for agricultural purposes from at least 1915 until 2006. Since portions of the subject property parcel were historically used for agricultural purposes, there is a potential that agricultural related chemicals including pesticides, herbicides, and fertilizers may have been used and stored on-site.

2.3 Geology

Review of the United States Geological Survey (USGS) *Lathrop, California* Quadrangle topographic map, indicates the subject property is situated at elevations ranging from approximately 24 to 12 feet above mean sea level, and the local topography is sloping gently to the south-southwest. Refer to Figure 2 for a topographic map of the site vicinity.

The subject property is situated within the Central Valley physiographic province of the State of California. The uppermost geologic formation underlying the soils at the subject property is the Pleistocene and Holocene Age San Joaquin Valley formation. The San Joaquin Valley formation comprises the underlying stratigraphy and consists mostly of igneous, metamorphic and unconsolidated marine sediment deposits.

Based on shallow soil samples collected during this investigation, the underlying subsurface consists predominantly of gravelly silty sand from the ground surface to approximately one foot below ground surface (bgs).

3.0 FIELD ACTIVITIES

The Shallow Soil Investigation scope included the collection of 120 shallow soil samples (SS-1 through SS-120) throughout the subject property parcels which were also composited into 30 samples as determined using the Department of Toxic Substances Control (DTSC) 2008 *Interim Guidance for Sampling Agricultural Properties (Third Revision)*. Refer to Table 1 for a summary of the soil samples, sampling schedule, and laboratory analyses for this investigation.

3.1 Preparatory Activities

Prior to the initiation of fieldwork, Partner completed the following activities.

3.1.1 Health and Safety Plan

Partner prepared a site-specific Health and Safety Plan, which was reviewed with on-site personnel involved in the project prior to the commencement of sampling activities.

3.2 Sampling Equipment

On May 12, 2021, Partner collected shallow soil samples at the subject property using a hand trowel and shovel. Sampling equipment was decontaminated between sample locations to prevent cross-contamination.

3.3 Sample Locations

Shallow soil samples SS-1 through SS-120 were collected from representative and equally distributed locations throughout the subject property parcels. Discrete soil samples were composited based on relative proximity to one another.

Refer to Figure 3 for a map indicating sample locations.

3.4 Soil Sampling

The subject property was divided into evenly-sized subareas and discrete representative soil samples were collected from within each subarea. Each soil sample was collected from a depth of six inches below ground surface (bgs) and transferred into a laboratory-provided eight-ounce, wide-mouthed, unpreserved glass jar, which was sealed with a threaded, Teflon-lined lid. The jars were labeled for identification and stored in an iced cooler.

Following the collection of the 120 discrete soil samples, 30 representative composite samples were compiled at the laboratory from the available soil samples.

3.5 Post-Sampling Activities

No significant amounts of derived wastes were generated during this investigation.

4.0 DATA ANALYSIS

4.1 Laboratory Analysis

Partner collected 120 shallow soil samples on May 12, 2021, which were transported in an iced cooler under chain-of-custody protocol to SunStar Laboratories Inc., a state-certified laboratory [California Department of Public Health Environmental Laboratory Accreditation Program certificate number 2250] in the City of Lake Forest, California, for analysis. A total of 30 composite samples were analyzed for OCPs via Environmental Protection Agency (EPA) Method 8081. Additionally, 30 discrete soil samples were analyzed for arsenic and lead via EPA Method 6010B.

Laboratory analytical results are included in Appendix A and discussed below.

4.2 Regulatory Agency Comparison Criteria

Environmental Screening Levels – 2019

The San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) has established Environmental Screening Levels (ESLs) as an initial screening level evaluation. ESLs aid in assessing the potential threats to human health, terrestrial/aquatic habitats, and/or drinking water resources due to contaminants in soil, soil gas, and/or groundwater. Under most circumstances, the presence of contamination below applicable ESLs can be assumed to not pose a significant, chronic (i.e., long-term) adverse risk to the applicable receptor of concern. Conversely, sites that exceed ESLs generally require further evaluation and/or remediation. Please note that the ESLs were developed using default assumptions (e.g., standard exposure factors) and, consequently, are only meant for screening level assessments. The ESLs should not be considered enforceable regulatory standards. Cleanup levels ultimately dependent on site-specific factors and are established by the regulatory agencies on a case-by-case basis.

4.3 Soil Sample Data Analysis

None of the analyzed composite soil samples contained detectable concentrations of OCPs above respective laboratory reporting limits (RLs), and the RLs are below applicable ESLs.

None of the analyzed discrete soil samples contained detectable concentrations of arsenic above the laboratory RL, and the RL is below the applicable ESL and/or background concentration.

Lead was detected in discrete soil samples SS-7 and SS-20 at concentrations of 4.89 and 4.38 milligrams per kilogram (mg/kg), respectively. However, both of these detections are below the residential ESL of 80 mg/kg and commercial ESL of 320 mg/kg and are likely representative of background conditions. None of the other analyzed discrete soil samples contained concentrations of lead above the laboratory RL.

Refer to Table 2 for a summary of the soil sample lead laboratory analysis results.

4.4 Discussion

Based on the results, low concentrations of lead were detected in localized areas of the northern parcel (APN 192-020-140). Lead was detected in two discrete soil samples; however, the detections do not exceed residential or commercial screening criteria and are likely representative of background conditions. As such,

the identified lead impacts in soil do not represent a significant risk to human health or the environment at this time.

5.0 SUMMARY AND CONCLUSIONS

Partner conducted a Shallow Soil Investigation at the subject property to evaluate the potential impact of OCPs, arsenic, and/or lead to shallow soil as a consequence of a release or releases from historical on-site agricultural-related uses. The scope of the Shallow Soil Investigation included the collection of 120 discrete soil samples. A total of 30 composite soil samples were analyzed for OCPs and 30 discrete soil samples were analyzed for arsenic and lead.

Subsurface lithology encountered in the upper one foot consisted predominately of gravelly silty sand.

None of the analyzed soil samples contained detectable concentrations of OCPs, lead, or arsenic above residential and/or commercial screening criteria and/or background levels.

Based on the results of the Shallow Soil Investigation, low concentrations of lead were detected in localized areas of the northern parcel (APN 192-020-140). Lead was detected in two discrete soil samples; however, the detections do not exceed residential or commercial screening criteria and are likely representative of background conditions. As such, the identified lead impacts in soil do not represent a significant risk to human health or the environment.

Partner recommends no further investigation with respect to the historical on-site agricultural-related uses at this time.

Project: APN 191-220-14, 191-220-59 + 191-220-60

Project Number: 21-308862.2

Project Manager: Joe Mangine

Reported:

05/21/21 14:25

Notes and Definitions

- S-11 The surrogate recovery was above acceptance criteria in the sample. The sample is ND for the analytes of interest. The surrogate recovery was within acceptance criteria in the method blank and LCS.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
