 **Model Is Setup For Calculation of Average CONCentration Values.

  --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
```

**NO PARTICLE DEPOSITION Data Provided.
**Model Uses NO DRY DEPLETION. DRYDPLT = F
**Model Uses NO WET DEPLETION. WETDPLT = F

**Model Uses RURAL Dispersion Only.

**Model Allows User-Specified Options:
1. Stack-tip Downwash.
2. Model Assumes Receptors on FLAT Terrain.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.

**Other Options Specified:
ADJ_U* - Use ADJ_U* option for SBL in AERMET
CCVR_Sub - Meteorological data includes CCVR substitutions
TEMP_Sub - Meteorological data includes TEMP substitutions

**Model Assumes No FLAGPOLE Receptor Heights.

**The User Specified a Pollutant Type of: OTHER

**Model Calculates 1 Short Term Average(s) of: 1-HR
and Calculates PERIOD Averages

**This Run Includes: 816 Source(s); 19 Source Group(s); and 454 Receptor(s)

with: 6 POINT(s), including
0 POINTCAP(s) and 0 POINTHOR(s)
and: 810 VOLUME source(s)
and: 0 AREA type source(s)
and: 0 LINE source(s)
and: 0 RLINE/RLINEXT source(s)
and: 0 OPENPIT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 18081

**Output Options Selected:
Model Outputs Tables of PERIOD Averages by Receptor
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing Hours
b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 7.90 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ; Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 4.3 MB of RAM.

**Input Runstream File: aermod.inp
**Output Print File: aermod.out

**Detailed Error/Message File: Lathrop Singh.err
**File for Summary of Results: Lathrop Singh.sum

(Job #22-095)

INTRODUCTION

Project Location

The Project site is located in section 14 of Township 1 South, Range 6 East. It includes two distinct planning boundaries defined below.

Project Site *(or* ***Annexation Area)*** – totals 22.42 acres and includes the whole of the Project, including the proposed 19.63-acre Development Area, and 2.79 acres of land along Roth Road and Manthey Road.

Development Area – totals 19.63 acres and is intended for the development of a travel center and associated circulation and parking improvements over two phases.

The proposed Project site is located on Assessor's Parcel Numbers (APNs) 191-250-14 and 191250-06, located in the northern portion of the City of Lathrop. The proposed Project is located west of Interstate 5 (I-5) and is bordered by Manthey Road and the future extension of Roth Road (Figures 1 through 3).

Existing Site Uses

The Project site is comprised of flat land with ruderal grasses, fallow ground, a few trees (located primarily along the northern and eastern boundary of the Project site), an abandoned structure, and impervious area. The footprint of the abandoned structure is approximately 1,430 square feet (sf) and the impervious area is approximately 2,500 sf.

Existing Surrounding Uses

The Project site is bordered by San Joaquin County land to the north, west, and south, while the Project site borders land located within the current boundaries of the City of Lathrop to the east. The City of Stockton city limits are located approximately 1,000 feet to the northeast of the Project site. The Project site is primarily bounded by undeveloped and residential land to the south, undeveloped land to the west, and agricultural and residential land to the north. The Project site is currently located within San Joaquin County. The Project site is outside the Lathrop city limits, but within the City's Primary Sphere of Influence (SOI). The setting of the Project site is illustrated in an aerial view on Figure 4.

General Plan Land Use Designations

The Project site is currently designated Freeway Commercial (FC) by the City of Lathrop General Plan Land Use Map and Agriculture/General (A/G) by the San Joaquin County General Plan Land Use Map. The FC designation generally allows building densities of 1-2 stories and building intensity up to 60% site area coverage. This classification of commercial activity is somewhat of

a hybrid in that it caters to uses which serve the regional market for specialized sales and service activities as well as uses which cater more strictly to the needs of the highway traveler. Specialized activities might include factory store centers, discount centers for home furniture, appliances, home improvement and sports, and commercial recreation centers for such activities such as bowling, skating, tennis, racquetball, water-oriented amusements and miniature golf. Uses which cater to the highway traveler include motels, restaurants, auto and truck sales and service, fuel stations, auto repair, RV sales and service, boat sales and service, sports equipment, bank service, truck stops and terminals, bus stops and facilities for overnight camping and RV parking.

The A/G designation provides for large-scale agricultural production and associated processing, sales, and support uses. The A/G Designation generally applies to areas outside areas planned for urban development where soils are capable of producing a wide variety of crops and/or support grazing. Typical building types include low-intensity structures associated with farming and agricultural processing and sales. The A/G designation provides for the following commercial agricultural operations and associated support uses:

- Crop production, grazing, and livestock raising facilities
- Agricultural processing facilities (e.g., canning operations, stockyards, feedlots)
- Agricultural support and sales (e.g., feed/grain storage, crop spraying, sale yards)
- Single-family detached dwellings
- Farm-employee housing and farm labor camps
- Accessory second units and ancillary residential structures
- Compatible public, quasi-public, and special uses
- Natural open space areas

The proposed Project would require a General Plan Amendment to the City's Land Use Map to change land uses on the Project site. Changes to the Land Use Map would include changing the designation for APN 191-250-06 from A/G (County) to FC (City).

Surrounding General Plan Designations

Within San Joaquin County, lands to the west of the Project site are designated Agriculture/General (A/G). Lands to the north, east, and south of the Project site are designated as Freeway Commercial (FC) by the City of Lathrop General Plan Land Use Map.

The Project site is currently zoned for Freeway Service Commercial (C-FS) and Agricultural (AG40) uses by the San Joaquin County Zoning Code (Development Title). The C-FS zone provides for a wide range of manufacturing, distribution and storage uses which have moderate to high nuisance characteristics such as noise, heat, glare, odor, and vibration, and which require segregation from other land uses, and/or may require outside storage areas. New lots in this zone are a minimum of 10,000 sf. The AG-40 zone provides for the continuation of commercial agricultural enterprises.

Project Description

The principal objective of the proposed Project is the approval of the proposed Project that includes development of the 19.63-acre Development Area for regional travel serving uses. Implementation of the Project would involve the development of fueling facilities, traveler amenities, and parking facilities for passing motorists and commercial truck operators.

The proposed Project includes the following amenities:

- Fueling facilities offering 8 truck fuel islands and 8 car fuel islands;
- Fuel tanks for both trucks and auto will be above ground with chain link fencing with privacy slats around the tanks.
- 246 truck/trailer spaces, 351 passenger vehicle spaces, 4 fueling and gas/diesel spaces, 18 electric vehicle spaces; and 16 ADA spaces;
- A 13,875-sf full service 4 bay truck repair shop;
- A 16,499-sf building that will include the following:
    - Office space;
    - Restroom facilities, 8 showers;
    - Laundry facility with 12 sets of washer/dryer;
    - Retail convenience store that will offer everyday products from truck accessories, toiletry supplies and a number of products for quick shopping needs for traveling and commuter customer base;
    - Dog run area enclosed with a metal fence
    - Two (2) quick service restaurants, one with a drive-thru option.
    - Seating area for patrons to dine.

Phase I Development

Phase I of the Project will develop 18.61 acres out of the 19.63-acre Development Area. The Phase I area is designed on an interim basis until the future realignment of Manthey Road, future Roth Road, and interchange improvements for I-5 are determined. Phase I will account for the future right-of-way (ROW) dedication for these improvements. The 2.79-acre piece of property between Manthey Road and I-5 will not be part of the Phase I Project site is identified as future ROW for future interchange improvements. Figure 5 illustrates the Phase I project work.

Phase II Development

Phase II of the Project includes: (1) the realignment of Manthey Road from the existing configuration to run along the western boundary of the Project site with a new connection to Roth Road, (2) improvement of Roth Road to the north of the Project site, and (3) improvements of the interchange for I-5. No new buildings are proposed as part of the Phase II development. Portions of Phase I site and circulation-related improvements will be removed which will allow the future improvements to be constructed. Additional parking will also be added for the auto portion of the development to incorporate the abandonment of the old Manthey Road.

Other Considerations

The Project site is currently within San Joaquin County, and within the City of Lathrop's Primary Sphere of Influence (SOI). The proposed Project would result in the annexation of APN 191-25014 and 191-250-06 (which includes the Project site) into the City of Lathrop.

The Project site is currently zoned for Freeway Service Commercial (C-FS) and Agricultural (AG-40) uses by the County. The San Joaquin County Local Agency Formation Commission (LAFCO) will require the Project site to be pre-zoned by the City of Lathrop in conjunction with the proposed annexation. The City's pre-zoning will follow the land use designation intent of General Plan Land Use Map (Freeway Commercial), as such the site will be zoned Highway Commercial (CH). The pre-zoning would go into effect upon annexation into the City of Lathrop.

Travel Plaza or Truck Stop is listed as a Conditional Use Permit in the Highway Commercial (HC) Zoning District (Section 17.44.050). As such, the Project would require the approval of a Conditional Use Permit (CUP) prior to Project approval.

Pursuant to Chapter 17.100 of the City's Zoning Code, the Project would require a site review prior to Project approval.

Circulation

Planned and previously-approved development projects within San Joaquin County, the City of Manteca, and the City of Lathrop will cause the Roth Road / I-5 interchange to operate at an unacceptable level. To address this, the City of Lathrop is working with the California Department of Transportation (Caltrans) to improve the Roth Road / I-5 interchange and realign Manthey Road.

These planned interchange improvements are not a part of the proposed Project. The intent for the proposed Project is that the site would be developed in Phase I, including the buildings (i.e., convenience store, including tenant spaces and the truck repair building, restrooms, etc.) and that in Phase II, the site would be modified to accommodate the planned Manthey Road realignment. The buildings developed during Phase I would remain and will not be modified as part of Phase II. As discussed below. Phase II would include circulation improvements related to site access, off-street parking, etc. Ultimately, the Manthey Road realignment will be triggered at a future point and as determined by the City via the Transportation Monitoring Program (TMP).

In Phase I all vehicles will enter the site via the two driveways on Manthey Road. Passenger vehicles will exit on the north side of the property from a driveway located on the future Roth Road. Trucks will have two exits located at the southern driveway on Manthey Road and the driveway on future Roth Road. The truck exit on Manthey Road will reduce the number of trucks using the exit only on future Roth Road where the auto exit driveway will be located.

In Phase II all vehicles will entire the site via two driveways on the future Roth Road. The interim driveways included in Phase I will be abandoned. To minimize trucks/auto vehicle conflict, the

ingress/egress were placed on different streets. Trucks will access/exit the site from realigned Manthey Road, and autos will access/exit the site from Roth Road only.

Infrastructure

The construction of onsite and offsite infrastructure improvements would be required to accommodate development of the proposed Project, as described below.

Electricity, gas and telephone services are located immediately adjacent to the Project site along Manthey Road. Development of the proposed Project would not require the expansion of these facilities or any off-site improvements. Water and sewer connections would need to be extended onsite to serve the Project. Storm water service will be provided by a private storm water infiltration basin located within the Project boundaries.

Water services for the proposed Project would be extended to the Project site from existing services from the intersection of Harlan Road and Roth Road east of I-5. The water lines would need to be extended west under the overpass along Roth Road to the Project site.

A sewer would be extended from the Project site to the intersection of Harlan Road and Roth Road east of I-5. The sewer lines would need to be extended west under the overpass along Roth Road to the Project site. The sanitary sewer line would be constructed within the existing ROW and no additional off-site ROW would be required for Project implementation.

A 7.5-foot-deep private storm water retention basin would be located in the southern portion of the Project site. A landscape strip would surround the retention basin, along a 3:1 slope. Storm drain lines for the proposed Project would be extended throughout the Project site to the retention basin.

The general area where all of this work will take place is illustrated on Figure 6. This is based on the Lathrop 7.5' topographic map published by the USGS.

Requested Entitlements

The City of Lathrop

The City will be the Lead Agency for the proposed Project, pursuant to the State Guidelines for Implementation of CEQA, Section 15050. Actions that would be required from the City include, but are not limited to the following:

- Certification of the EIR;
- Adoption of the Mitigation Monitoring and Reporting Program;
- General Plan Amendment from A/G (County) to FC for APN 191-250-06;
- Annexation approval and the annexation of the subject parcels by the City of Lathrop and San Joaquin Local Agency Formation Commission;

- Zoning Amendments and Prezoning for annexation of the Project site;
- Approval of CUP;
- Approval of Site Plan Review;
- Approval of Improvement Plans;
- Approval of Grading Plans;
- Approval of Building Permits;
- Approval of Project Utility Plans.

Other Public Agencies

The following agencies may be required to issue permits or approve certain aspects of the proposed Project. Other governmental agencies that may require approval include, but are not limited to, the following:

- San Joaquin LAFCo - Annexation;
- San Joaquin Council of Governments (SJCOG) - Compliance with Airport Land Use Compatibility Plan (ALUCP) and San Joaquin County Multi-Species Habitat Conservation and Open Space Plan (SJMSCP)Compliance;
- San Joaquin Valley Air Pollution Control District (SJVAPCD) - Approval of construction related air quality permits. Additionally, as an industrial development, the Project may be subject to Indirect Source Review (ISR) by the SJVAPCD;
- Central Valley Regional Water Quality Control Board (CVRWQCB) - Storm Water Pollution Prevention Plan (SWPPP) approval prior to construction activities pursuant to the Clean Water Act and water quality certification pursuant to Section 401 of the Clean Water Act;
- Lathrop Manteca Fire District - Plan check of the site plan and roadway improvements for adequate emergency vehicle access and fire flow capabilities.

Cultural Resources

The project included a records search through the Central California Information Center of the California Historical Resources Information System, a complete field survey of the Project, and preparation of a site inventory form for the former site of a residence in the Project Area, and resource evaluation. The City of Lathrop also conducted Native American consultation for the project.

Melinda A. Peak, senior historian/archeologist with Peak & Associates, Inc. served as principal investigator for the study, with archeologist Michael Lawson completing the field surveys (resumes, Appendix 1).

C. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or

D. Has yielded, or may be likely to yield, information important in prehistory or history.

In addition, the CEQA Guidelines, Section 15064.5(a) (4) states:

The fact that a resource is not listed in, or determined to be eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to section 5020.1(k) of the Public Resources Code), or identified in an historical resources survey (meeting the criteria in section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code section 5020.1(j) or 5024.1.

California Health and Safety Code Sections 7050.5, 7051, and 7054

These sections collectively address the illegality of interference with human burial remains, as well as the disposition of Native American burials in archaeological sites. The law protects such remains from disturbance, vandalism, or inadvertent destruction, and establishes procedures to be implemented if Native American skeletal remains are discovered during construction of a project, including the treatment of remains prior to, during, and after evaluation, and reburial procedures.

California Public Resources Code Section 15064.5(e)

This law addresses the disposition of Native American burials in archaeological sites and protects such remains from disturbance, vandalism, or inadvertent destruction. The section establishes procedures to be implemented if Native American skeletal remains are discovered during construction of a project and establishes the Native American Heritage Commission as the entity responsible to resolve disputes regarding the disposition of such remains.

Assembly Bill 52

Assembly Bill (AB) 52 establishes a formal consultation process for California tribes as part of CEQA and equates significant impacts on tribal cultural resources with significant environmental impacts. AB 52 defines a "California Native American Tribe" as a Native American tribe located in California that is on the contact list maintained by the Native American Heritage Commission. AB 52 requires formal consultation with California Native American Tribes prior to determining the level of environmental document if a tribe has requested to be informed by the lead agency of proposed projects. AB 52 also requires that consultation address project alternatives, mitigation measures, for significant effects, if requested by the California Native American Tribe, and that consultation be considered concluded when either the parties agree to measures to mitigate or avoid a significant effect, or the agency concludes that mutual agreement cannot be reached. Under AB 52, such measures shall be recommended for inclusion in the environmental document and

adopted mitigation monitoring program if determined to avoid or lessen a significant impact on a tribal cultural resource.

CULTURAL SETTING

Prehistory

The Central Valley region was among the first in the state to attract intensive fieldwork, and research has continued to the present day. This has resulted in a substantial accumulation of data. In the early decades of the 1900s, E.J. Dawson explored numerous sites near Stockton and Lodi, later collaborating with W.E. Schenck (Schenck and Dawson 1929). By 1933, the focus of work was directed to the Cosumnes locality, where survey and excavation studies were conducted by the Sacramento Junior College (Lillard and Purves 1936). Excavation data, in particular from the stratified Windmiller site (CA-Sac-107), suggested two temporally distinct cultural traditions. Later work at other mounds by Sacramento Junior College and the University of California, Berkeley, enabled the investigators to identify a third cultural tradition, intermediate between the previously postulated Early and Late Horizons.

The three-horizon sequence, based on discrete changes in ornamental artifacts and mortuary practices, as well as on observed differences in soils within sites (Lillard, Heizer and Fenenga 1939), was later refined by Beardsley (1954). An expanded definition of artifacts diagnostic of each time period was developed, and its application extended to parts of the central California coast. Traits held in common allow the application of this system within certain limits of time and space to other areas of prehistoric central California.

The Windmiller Culture (Early Horizon) is characterized by ventrally-extended burials (some dorsal extensions are known), with westerly orientation of heads; a high percentage of burials with grave goods; frequent presence of red ocher in graves; large projectile points, of which 60 percent are of materials other than obsidian; rectangular *Haliotis* beads; *Olivella* shell beads (types A1a and L); rare use of bone; some use of baked clay objects; and well-fashioned charmstones, usually perforated.

The Cosumnes Culture (Middle Horizon) displays considerable changes from the preceding cultural expression. The burial mode is predominately flexed, with variable cardinal orientation and some cremations present. There are a lower percentage of burials with grave goods, and ocher staining is common in graves. *Olivella* beads of types C1, F and G predominate, and there is abundant use of green *Haliotis* sp. rather than red *Haliotis* sp. Other characteristic artifacts include perforated and canid teeth; asymmetrical and “fishtail” charmstones, usually unperforated; cobble mortars and evidence of wooden mortars; extensive use of bone for tools and ornaments; large projectile points, with considerable use of rock other than obsidian; and use of baked clay.

Hotchkiss Culture (Late Horizon) -- The burial pattern retains the use of the flexed mode, and there is wide spread evidence of cremation, lesser use of red ocher, heavy use of baked clay, *Olivella* beads of Types E and M, extensive use of *Haliotis* ornaments of many elaborate shapes and forms,

shaped mortars and cylindrical pestles, bird-bone tubes with elaborate geometric designs, clam shell disc beads, small projectile points indicative of the introduction of the bow and arrow, flanged tubular pipes of steatite and schist, and use of magnesite (Moratto 1984:181-183). The characteristics noted are not all-inclusive, but cover the more important traits.

Schulz (1981), in an extensive examination of the central California evidence for the use of acorns, used the terms Early, Middle and Late Complexes, but the traits attributed to them remain generally the same. While it is not altogether clear, Schulz seemingly uses the term "Complex" to refer to the particular archeological entities (above called "Horizons") as defined in this region. Ragir's (1972) cultures are the same as Schulz's complexes.

Bennyhoff and Hughes (1984) have presented alternative dating schemes for the Central California Archeological Sequence. The primary emphasis is a more elaborate division of the horizons to reflect what is seen as cultural/temporal changes within the three horizons and a compression of the temporal span.

There have been other chronologies proposed, including Fredrickson (1973), and since it is correlated with Bennyhoff's (1977) work, it does merit discussion. The particular archeological cultural entities Fredrickson has defined, based upon the work of Bennyhoff, are patterns, phases and aspects. Bennyhoff's (1977) work in the Plains Miwok area is the best definition of the Cosumnes District, which likely conforms to Fredrickson's pattern. Fredrickson also proposed periods of time associated heavily with economic modes, which provides a temporal term for comparing contemporary cultural entities. It corresponds with Willey and Phillips' (1958) earlier "tradition", although it is tied more specifically to the archeological record in California.

Ethnography

The Project Area lies within the northern portion of the ethnographic territory of the Yokuts people. The Yokuts were members of the Penutian language family which held all of the Central Valley, San Francisco Bay Area, and the Pacific Coast from Marin County to near Point Sur. The Yokuts differed from other ethnographic groups in California as they had true tribal divisions with group names (Kroeber 1925; Latta 1949). Each tribe spoke a particular dialect, common to its members, but similar enough to other Yokuts that they were mutually intelligible (Kroeber 1925).

The Yokuts held portions of the San Joaquin Valley from the Tehachapi mountains in the south to Stockton in the north. On the north they were bordered by the Plains Miwok, and on the west by the Saclan or Bay Miwok and Ohlone peoples. Although neighbors were often from distinct language families, differences between the people appear to have been more influenced by environmental factors as opposed to linguistic affinities. Thus, the Plains Miwok were more similar to the nearby Yokuts than to foothill members of their own language group. Similarities in cultural inventory co-varied with distance from other groups and proximity to culturally diverse people. The material culture of the southern San Joaquin Yokuts was therefore more closely related to that of their non-Yokuts neighbors than to that of Delta members of their own language group.

Trade was well developed, with mutually beneficial interchange of needed or desired goods. Obsidian, rare in the San Joaquin Valley, was obtained by trade with Paiute and Shoshoni groups on the eastern side of the Sierra Nevada, where numerous sources of this material are located, and to some extent from the Napa Valley to the north. Shell beads, obtained by the Yokuts from coastal people, and acorns, rare in the Great Basin, were among many items exported to the east by Yokuts traders (Davis 1961).

Economic subsistence was based on the acorn, with substantial dependency on gathering and processing of wild seeds and other vegetable foods. The rivers, streams, and sloughs that formed a maze within the valley provided abundant food resources such as fish, shellfish, and turtles. Game, wild fowl, and small mammals were trapped and hunted to provide protein augmentation of the diet. In general, the eastern portion of the San Joaquin Valley provided a lush environment of varied food resources, with the estimated large population centers reflecting this abundance (Cook 1955; Baumhoff 1963).

Settlements were oriented along the water ways, with their village sites normally placed adjacent to these features for their nearby water and food resources. House structures varied in size and shape (Latta 1949; Kroeber 1925), with most constructed from the readily available tules found in the extensive marshes of the low-lying valley areas. The housepit depressions for the structures ranged in diameter from 3 meters to 18 meters (Wallace 1978:470).

Historical Background

The northern section of the City of Lathrop lies on a portion of the Rancho Campo de los Franceses, the ranch named for the early camp first occupied by French-Canadian trappers employed by the Hudson's Bay Company in 1832. The site of the present-day location of French Camp was the terminus of the Oregon Trail used by the trappers between 1832 and 1845. In 1843, William Gulnac, likely one of the trappers who had become a Mexican citizen, with Charles Weber, later founder of Stockton, organized a company of 12 men for the purpose of forming a colony at French Camp. Gulnac filed for a land grant, and was awarded a large tract of land including French Camp and the later site of Stockton by the Mexican government.

Much of the remainder of the land is a portion of the El Pescadero land grant. The Mexican land grant of 35,546 acres, lying in portions of what is now San Joaquin and Alameda counties, was awarded in 1843 to Antonio Maria Pico. Pico sold one half of the property to Henry Morris Naglee in 1849. Pico sold one half of the remainder of the property in 1852 to John C. Frémont. After California became a state, a claim was filed for the grant in 1852 and rejected in 1854, but ultimately the land grant was patented to Pico and Naglee in 1865. The land grant was settled by numerous squatters, and Fremont sold his land to Charles McLaughlin in 1867.

Lathrop first was a station on the Central Pacific, established in 1869 when the last stretch of the transcontinental railroad was built from Sacramento through this region, crossing the San Joaquin River at Mossdale to reach the Bay Area.

The site of Lathrop was first known as Wilson's Station, and included a store and a schoolhouse on land belonging to Thomas A. Wilson. Due to conflicts in the City of Stockton that infuriated Leland Stanford, the Central Pacific Railroad switched many operations to Wilson's Station, later re-named for Charles Lathrop, brother-in-law of Leland Stanford. The town drew significant commerce away from the City of Stockton. The railroad's machine shops and roundhouse were built here, and the town became an important division point and major stop on the railroad line beginning in 1871. The Visalia Division of the Stockton Branch of the Southern Pacific Railroad was completed at that time, serving the San Joaquin Valley. Lathrop became an important shipping point for agricultural products.

The early major building in Lathrop was the 1871 Central Pacific Railroad restaurant, serving passengers from trains from the Bay Area to Sacramento, and passengers travelling to the San Joaquin Valley. After he physically struck United States Supreme Court Justice Stephen Field in 1889 in the Central Pacific restaurant, attorney David S. Terry was shot and killed by Field's bodyguard.

Lathrop remained important for the railroads, and in 1890, had about 500 residents. Daily, there were twelve passenger and 44 freight trains passing through. But that changed in the early 1890s with the growth of Tracy, and the transfer of the machine shop and roundhouse to that community. The completion of the Western Pacific railroad in 1909 did not affect the town, with the local station located about ¾ miles from the town.

In 1942, the Lathrop Holding and Reconsignment Point was established in the Lathrop vicinity on what had been a sheep ranch, holding supplies for shipment through Bay Area ports. As many as 450 railroad cars would be loaded and unloaded each day.

The facility has gone through many changes with the changing needs of the military during times of conflict. After the end of World War II, the depot went through administrative and supply mission changes, the government applied a new name in 1948: Sharpe General Depot. The conflict in Korea brought a demand for increased services as the staffing, shipments and missions doubled during the three years of the war. The Army curtailed supply operations, and the Sharpe site began providing medical supplies and subsistence items on a larger scale. In 1962, the facility became the Sharpe Army Depot.

In 1965, with the escalation of the war in Vietnam, Sharpe became the major conduit for supplies moving to Southeast Asia. The Sharpe facility has continued to operate with a large part of the staffing switched to the Tracy facility beginning in 1999.

In the 1950s, several industrial plants were built in the Lathrop area, providing additional employment in the region. Beginning in the 1980s, improvements to community infrastructure and the attractive pricing of homes brought even more growth. The pattern of rapid growth continues to this day, with industrial and commercial development in the area, as well as many residents commuting daily to the Bay Area. The City of Lathrop incorporated in 1989.

Site Specific History

The Project area is open land in 1915, with no buildings present, and located west of a major roadway (Lathrop USGS topographic map 1915). In 1952, the Project Area is again vacant, and the roadway has been identified as Highway 99 (Lathrop USGS topographic map 1952). The 1952 topographic map was revised in 1968, and the house had been added to the Project Area by that date, with the roadway then identified as Highway 50. By 1976, the roadway was officially Interstate 5.

CCIC RESEARCH

A record search was conducted for the current APE and a 0.25-mile radius at the Central California Information Center of the California Historical Resources Information System on September 9, 2020 (Record Search File No.: 11495L; Appendix 2).

The Project site has never been surveyed in the past. There are no cultural resources recorded in or near the Project site or search radius. One survey has been completed within the survey area radius by Peter Jensen in 2002 for the Lathrop Storm Drainage System (# SJ-4824). Peak & Associates surveyed about half of the current Project area.

NATIVE AMERICAN CONSULTATION

Peak & Associates contacted the Native American Heritage Commission (NAHC) for a check of the Sacred Lands files. On October 19, 2020, the NAHC provided a reply with positive results. All correspondence related to the consultation effort are presented in Appendix 3.

The City of Lathrop sent a letter to the Northern Valley Yokuts tribe on January 22, 2021 including questions about the identified Sacred site and for information and evidence to support the presence of a Sacred site. On February 5, 2021, the City received letter from the Northern Valley Yokuts Tribe requesting Consultation per PRC Section 21080.3.2(a). The City confirms the receipt of the consultation request on February 19, 2021, and sets a meeting with Ms. Perez for February 26, 2021. Ms. Perez does not attend the meeting.

Further follow-up contacts with Ms. Perez resulted in a meeting scheduled for April 9, 2021. This meeting with Mark Meissner (Community Development Director, City of Lathrop) Steve McMurtry, De Novo Planning Group) David Niskanen (J.B. Anderson Land Use Planning) and Katherine Perez (Northern Valley Yokuts) is held on April 9, 2021. Ms. Perez was informed that a survey had been conducted and nothing related to the prehistoric people found at the site. Ms. Perez stated that there was a nearby site considered to be a Sacred Land, but that the tribe had no information on the site in the Project area. She recommended the archeologist contact the NAHC for further information. If the NAHC would not provide specifics regarding Sacred Lands, then the archeologists could do an excavation with their group acting as monitors for the test effort.

On April 9, 2021, the NAHC was contacted by Peak & Associates, and they responded they would not provide any further information on a Sacred Land except to the tribe that registers the site. No further information was forthcoming from with the NAHC or the North Valley Yokuts tribe. Since archeological testing is not a normal action with no indication of a site or with the project area containing the appropriate setting for a site, the City of Lathrop decided to close out the consultation effort.

The NAHC sent their standard letter on December 29,2022 after their receipt of the Notice of Preparation for the project.

FIELD ASSESSMENT

Michael Lawson (resume, Appendix 1) completed a field survey of a portion of the Project site on September 14, 2020 (Figure 7).

The landform appears naturally flat, but possibly leveled for farming. Although no farming features were observed, adjacent parcels show evidence of agricultural use in the form of tractors and implements, as well as crops. No observable natural water drainages, ditches or canals were present.

The vegetation included native and introduced grasses and brush, a mature mulberry tree, and several unidentified introduced species. Soil throughout the parcel was consistent in type and coloration, composed of sandy loam with some silt, light tan in color with very few pebbles.

Survey strategy included parallel transects no greater than ten meters apart, with closer spacing in areas of exceptional ground visibility, such as animal trails or rodent excavations.

Ground visibility was good to fair due to heavy dried grasses that are disintegrating and thinning in the late summer. Some scraping with a hoe was required to achieve acceptable soil observation.

Michael Lawson completed a second survey covering the remainder of the Project area on January 22, 2023, again using full coverage. No prehistoric or historic resources were found in the new survey area.

SURVEY RESULTS

No prehistoric period resources were found within the boundaries of the Project area. One historic site remnant was found and recorded as ML-20-06 in 2021 field survey effort (Appendix 3).

The property is the site of a former farm headquarters venture adjacent on the west to Manthey Road just west of Interstate 5 south of Roth Road (extended). All that remains is a small area of concrete

and timber foundations and pavements covering an area of about 72 feet north-south by 70 feet east -west. As recently as 2017, there was a standing structure at this location (Google Earth aerial). In addition to the foundations there is construction rubble present consisting of bricks (including a section of fallen brick wall), planks of various sizes and various pieces of hardware consistent with a date in the 1950s or 1960s. The foundation consists of poured concrete around the perimeter with pier blocks in the center. An uncompleted room on the west side has wooden forms with rebar, as well as pier-pits ready for concrete.

The building was constructed after 1952 but before 1968, per publication date of the Lathrop 7.5' USGS maps. The house appears on the revision but not the original map. The building may have burned down, since there is evidence of fire near an incomplete room on the west side. However, this could be the result of a fire after the house was abandoned.

EVALUATION OF RESOURCE: ML-20-06

For a property to be eligible for the California Register of Historical Resources, a property must meet one of the following criteria:

a. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

b. Is associated with the lives of persons important in our past;

c. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or

d. Has yielded, or may be likely to yield, information important in prehistory or history.

Although it appears to be relatively evident for a remnant of a residence built sometime between 1952-1968, each of the criteria can be addressed as follows:

There are no known significant events in the Lathrop area in the 1950s-1980s related to this residence. Similarly, no association with important individuals can be found.

The building was removed in 2017; the remnant that still exists does not embody of a particular style, type, or method of construction; no specific important architect can be identified for the property.

There are no particular archeological values for a property that undoubtedly participated in normal waste disposal practices, and there would be no value to any items remaining at the site.

In conclusion, the building remnant has been recorded, and is not eligible for the California Register of Historical Resources, and there are no significant cultural resources with the Project Area.

RECOMMENDATIONS

Although no prehistoric sites were found during the survey, there is a slight possibility that a site may exist and be totally obscured by vegetation, fill, or other historic activities, leaving no surface evidence. Should artifacts or unusual amounts of stone, bone, or shell be uncovered during construction activities, work in that part of the Project area shall be halted, and an archeologist should be consulted for on-the-spot evaluation of the finding.

Discovery of Human Remains

In the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance of the site or any nearby area suspected to overlie adjacent remains until the San Joaquin County Coroner has determined that the remains are not subject to any provisions of law concerning investigation of the circumstances, manner and cause of death, and the recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation, or to his or her authorized representative. The coroner shall make his or her determination within two working days from the time the person responsible for the excavation, or his or her authorized representative, notifies the coroner of the discovery or recognition of the human remains.

If the San Joaquin County Coroner determines that the remains are not subject to his or her authority and if the Coroner recognizes the human remains to be those of a Native American or has reason to believe that they are those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission (NAHC).

After notification, the NAHC will follow the procedures outlined in Public Resources Code Section 5097.98, that include notification of most likely descendants (MLDs), and recommendations for treatment of the remains. The MLDs will have 24 hours after notification by the NAHC to make their recommendations (PRC Section 5097.98).

Resumes

PEAK & ASSOCIATES, INC.
RESUME

MELINDA A. PEAK **January 2023**
Senior Historian/Archeologist
3941 Park Drive, Suite 20 #329
El Dorado Hills, CA 95762
(916) 939-2405

PROFESSIONAL EXPERIENCE

Ms. Peak has served as the principal investigator on a wide range of prehistoric and historic excavations throughout California. She has directed laboratory analyses of archeological materials, including the historic period. She has also conducted a wide variety of cultural resource assessments in California, including documentary research, field survey, Native American consultation and report preparation.

In addition, Ms. Peak has developed a second field of expertise in applied history, specializing in site-specific research for historic period resources. She is a registered professional historian and has completed a number of historical research projects for a wide variety of site types.

Through her education and experience, Ms. Peak meets the Secretary of Interior Standards for historian, architectural historian, prehistoric archeologist and historic archeologist.

EDUCATION

M.A. - History - California State University, Sacramento, 1989
Thesis: *The Bellevue Mine: A Historical Resources Management Site Study in Plumas and Sierra Counties, California*
B.A. - Anthropology - University of California, Berkeley

PROJECTS

In recent years, Ms. Peak has led the team completing the cultural resource sections for General Plan and General Plan Updates, for a number of cities/neighborhoods including Campbell, Milpitas, Yountville, Manteca, The Springs, Sebastopol, Martinez, Brentwood, Colusa County and Foster City. Older General Plan efforts include Wheatland, Rocklin, Sheridan, Granite Bay and South Sutter County.

In recent months, Ms. Peak has completed a number of determinations of eligibility and effect documents in coordination with the Corps of Engineers for projects requiring federal permits, assessing the eligibility of a number of sites for the National Register of Historic Places.

She has also completed historical research and historic site evaluation projects on a wide variety of topics for a number of projects including the development of a winery in a ranch in Folsom,

commercial buildings in the City of Davis, a lumber mill in Clovis, levees, warehouses, older farmhouses dating to the 1860s, an early roadhouse, bridges, canals, a former small-town site, and a section of an electric railway line.

In recent years, Ms. Peak has prepared a number of cultural resource overviews and predictive models for blocks of land proposed for future development for general and specific plans. She has been able to direct a number of surveys of these areas, allowing the model to be tested.

Ms. Peak completed the cultural resource research and contributed to the text prepared for the DeSabla-Centerville PAD for the initial stage of the FERC relicensing. She also served cultural resource project manager for the FERC relicensing of the Beardsley-Donnells Project. For the South Feather Power Project and the Woodleaf-Palermo and Sly Creek Transmission Lines, her team completing the technical work for the project.

She served as principal investigator for the multi-phase Twelve Bridges Golf Club project in Placer County. She served as liaison with the various agencies, helped prepare the historic properties treatment plan, managed the various phases of test and data recovery excavations, and completed the final report on the analysis of the test phase excavations of a number of prehistoric sites.

Ms. Peak has served as project manager for a number of major survey and excavation projects in recent years, including the many surveys and site definition excavations for the 172-mile-long Pacific Pipeline proposed for construction in Santa Barbara, Ventura and Los Angeles counties. She also completed an archival study in the City of Los Angeles for the project, and served as principal investigator for a major coaxial cable removal project for AT&T.

Additionally, she completed a number of small surveys, served as a construction monitor at several urban sites, and conducted emergency recovery excavations for sites found during monitoring. She has directed the excavations of several historic complexes in Sacramento, Placer and El Dorado Counties.

Ms. Peak is the author of a chapter and two sections of a published history (1999) of Sacramento County, *Sacramento: Gold Rush Legacy, Metropolitan Destiny*. She served as the consultant for a children's book on California, published by Capstone Press in 2003 in the Land of Liberty series.

PEAK & ASSOCIATES, INC.
RESUME

MICHAEL LAWSON **January 2023**
Archeological Specialist
3941 Park Drive, Suite 20-329
El Dorado Hills, CA 95672
(916) 939-2405

PROFESSIONAL EXPERIENCE

Mr. Lawson has compiled an excellent record of supervision of excavation and survey projects for both the public and private sectors over the past twenty-six years. He has conducted a number of surveys throughout northern and central California, as well as serving as an archeological technician and crew chief for a number of excavation projects.

EDUCATION

B.A. - Anthropology - California State University, Sacramento

Special Course: Comparative Osteology. University of Tennessee, Knoxville. Forensic Anthropology Center. January 2018.

Intensive lab and outdoor study with human example from outdoor research facility, including typical and non-metric examples, compared with fifty non-human species most commonly confused with human remains. Outdoor research facility "The Body Farm" study included survey, photography, collection and identification of faunal and human bone fragments, with a Power Point presentation discussing finds.

EXPERIENCE

- Extensive monitoring of open space, streets and project development areas for prehistoric period and historic period resources. Areas monitored include Sutter Street in Folsom; Mud Creek Archeological District in Chico; Camp Roberts, San Luis Obispo County; Avila Beach, San Luis Obispo County; Edgewood Golf Course, South Lake Tahoe; Davis Water Project, Davis; Star Bend levee section, Sutter County; Feather River levees, Sutter County; Bodega Bay, Sonoma County; San Jose BART line extension, Santa Clara County; and numerous sites for PG&E in San Francisco.
- Over twenty years of experience working in CRM, volunteer, and academic settings in California historic, proto-historic, and prehistoric archaeology.
- Expertise in pedestrian survey, excavation, feature (including burial) exposure, laboratory techniques, research. Field positions include crew chief and lead technician.

Re: Singh Petroleum, San Joaquin County

Dear Mr. Gerry:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were positive. Please contact the North Valley Yokuts Tribe on the attached list for more information. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Nancy.Gonzalez-Lopez@nahc.ca.gov.

Sincerely,

Nancy Gonzalez-Lopez
Cultural Resources Analyst

J.B. Anderson Land Use Planning
David Niskanen, Associate Planner

MEETING SUMMARY

The following are the summary notes from the Assembly Bill 52 (AB 52) Consultation Meeting with Ms. Katherine Perez, Chairperson of the Northern Valley Yokuts tribe.

David provided introductions and a description of the Singh Petroleum TA Travel Plaza Project, its location and status of the Environmental Impact Report (EIR). David also provided background on the correspondence with the Northern Valley Yokuts tribe and the Native American Heritage Commission (NAHC). The archeologist, Peak & Associates, Inc., received a letter from the NAHC on October 19, 2020 stating that a record search of the NAHC Sacred Lands File (SLF) was completed and the results were positive for the site. David stated that the letter sent to the Northern Valley Yokuts tribe on January 22, 201 included questions related to the Sacred Lands determination, such as asking for additional information and evidence on file to support that the subject property is Sacred Land.

Steve added that the as part of the EIR, an archeologist with Peak & Associates, Inc. did a surface survey/search of the property and did not find any evidence of cultural and/or archaeological findings. Steve also asked if there is evidence of the Sacred Land determination from the tribe or additional information that the tribe can share with the City.

Katherine stated that it is possible that the there is a site nearby that is considered Sacred Land. Katherine added that the tribe does not have information regarding Sacred Land and suggested that the archaeologist contact NAHC to obtain additional information. With regards to the surface survey/search, it is possible that the archeologist did not find any evidence on the surface but evidence could be found sub-surface. Katherine added that it is important for the tribe to be involved in ground disturbances.

Steve asked if there is a radius around the Sacred Land site and that burial sites are typically found near the San Joaquin River and the project site is a 1 ½ miles to the east of the river. Steve also referenced the burial sites located in Mossdale Landing. Katherine added that water sources meander over time. Steve asked what would the tribe like regarding this project – monitor during ground disturbance?

Katherine suggested that if the NAHC is unwilling to provide specifics regarding Sacred Land then the archaeologist can do sub-surface testing with monitors on-site. This would provide a green-lite for the project (if no evidence is found). Examples of testing include trenching, auguring, geotechnical testing, and potholes. Steve stated the Bear Creek Project in Stockton did trenching of 100 ft. or so at a 4 – 5 ft. depth.

Katherine recommended trenching instead of auguring and that she would want to be on-site. Katherine added that this level of inspection can satisfy everyone at the same time and reduce potential impacts to burial sites during construction and it would cost less to complete it now.

Steve asked if Katherine would like to review the Cultural Report before it goes public, and he would have to discuss with the City regarding the timing of testing. Katherine stated that she would like to review the Cultural Report. David added no activity is occurring on the site at this time.

Steve stated that he will discuss with the City regarding testing options. The City will also keep Katherine up to date on the status of the project.

Hi Melinda,

The tribe indicated in the SLF Yes letter should be the tribe that registered the site. If there is no tribe indicated on the letter, it means the site was registered by an individual. We are required to notify lead agencies of there being a SLF site hit, however, we no longer give out information concerning these individuals. In these cases, reaching out to the tribes indicated on the contact list we provide for more information is sufficient.

Subject: Singh Petroleum, San Joaquin County, positive SLF letter 10-19-20

Nancy,

This is a slow moving project. Six months after your letter, my client contacted Kathy Perez for consultation today, and Kathy did not know why this area was listed as positive. Kathy suggested we contact you and ask if there anything you can tell me about what is there, and who filed information with you? There are some major sites about a mile away.

Thanks for any help you can give me.

Re: 2022120596, Singh Petroleum Investments Project, San Joaquin County

Dear Ms. Caguiat:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements**. If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- **a.** A brief description of the project.
- **b.** The lead agency contact information.
- **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

- **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- **a.** Alternatives to the project.
- **b.** Recommended mitigation measures.
- **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

- **a.** Type of environmental review necessary.
- **b.** Significance of the tribal cultural resources.
- **c.** Significance of the project's impacts on tribal cultural resources.
- **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
- **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).

2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.

3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).

4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:

- **a.** The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
- **b.** Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (https://ohp.parks.ca.gov/?page_id=30331) for an archaeological records search. The records search will determine:

- **a.** If part or all of the APE has been previously surveyed for cultural resources.
- **b.** If any known cultural resources have already been recorded on or adjacent to the APE.
- **c.** If the probability is low, moderate, or high that cultural resources are located in the APE.
- **d.** If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.

- **a.** The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
- **b.** The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:

a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.

b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.

a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.

b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.

c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Pricilla.Torres-Fuentes@nahc.ca.gov.

Sincerely,

Pricilla Torres-Fuentes

EXECUTIVE SUMMARY

Site Description

Undeveloped, relatively flat lot

Project Description

Design and construction of truck stop.

Geological Hazards

Violent shaking from earthquake generated ground motion waves.

Grading Requirements

Scarify foundation and pavement areas 12 inches, scarify 12 inches, moisture condition, and recompact

Location	Material	Moisture	Compaction
Foundation Bearing	Native	Optimum	90%
Foundation Bearing	Import Fill	Optimum	90%
Pavement Areas	Native	Optimum	95%
Pavement Areas	Import Fill	Optimum	95%

Foundation Design

Type	Bearing Capacity	Minimum Width	Minimum Embedment
Spread	3000 psf	24 inches	24 inches
Continuous	3000 psf	12 inches	24 inches

Lateral Load Parameters

Lateral Resistance		Equivalent Fluid Pressure		
Parameter	Value	Wall Type	Level Backfill	Sloped 2H:1V
Friction Coefficient	0.3	Cantilever	40 pcf	60 pcf
Passive Resistance	250 psf/ft (1250 psfmax)	Restrained	60 pcf	80 pcf

Seismic Design Parameters

Parameter	Value
Risk Category	II
Site Class	D
S_{DS}	0.638g
S_{D1}	0.402g
SDC	D

Pavement Design

Traffic Area	TI	R-Value	Asphalt Pavements		PCC Pavements,	
			AC (in)	Class II AB (in)	PCC (in)	Class II AB (in)
Parking Aisles	5.0	10	3.0	9	4	4
Auto Drive and Parking Areas	6.0	10	4.0	11	5	4
Pavement Truck and Bus Loading & Drive New Pavement Areas	7.0	10	4.0	15	6	4
Heavy Pavement Truck and Bus Loading & Drive New Pavement Areas	8.0	10	5.0	16	7	4

The results and recommendations presented in this Executive Summary should not be used for design or construction outside the context of the full report. The document should be evaluated and all recommendations should be taken in context.

Subject: Geotechnical Engineering Investigation
Singh Petroleum Investments Percolation
11293 S. Manthey Rd
Lathrop, CA 95330

Dear Gurbinder Singh,

In accordance with your request and authorization of CTE Cal Inc. (CTE) proposal, CTE has completed a geotechnical investigation at the above referenced project site. The attached report contains the results of our subsurface investigation, laboratory testing program, and engineering evaluation of the geotechnical and geological elements of the project site. Specifically, the report provides geotechnical engineering design parameters and construction recommendations for the design and development of the proposed project structures and site improvements.

Based on CTE's subsurface investigations, site materials testing, and our geotechnical and engineering evaluation, the project is considered feasible from a geotechnical standpoint provided the recommendations contained in the attached report are incorporated into the project design and construction. The recommendations contained are based on the assumption that CTE Cal will perform the required observations and construction services. CTE Cal's experience has found that there are considerable cost savings and reduction of risk by retaining the Geotechnical Engineer of Record for construction services.

If you have any questions regarding our findings or recommendations, please do not hesitate to contact this office. The opportunity to be of service is appreciated.

Respectfully submitted,

CTE Cal, INC.

Mike Kennedy, PE 88971
Project Engineer

Selena Gray, EIT
Staff Engineer

TABLE OF CONTENTS

FIGURES

APPENDICES

1.0 INTRODUCTION AND SCOPE OF SERVICES

1.1 Introduction

The proposed development consists of designing and constructing a new full service travel plaza located at 11293 S. Manthey Road in Lathrop, California.

This report presents the results of the Geotechnical Engineering Investigation, performed by CTE Cal, Inc. (CTE). The report provides conclusions and recommendations regarding the geotechnical design parameters and construction recommendations for the proposed development.

The investigation contained herein included surface and subsurface field explorations, laboratory testing of site soil deposits, geologic and seismic hazard evaluation of the project site, and engineering evaluation and analysis of the proposed project site and improvements. Based on the results of the investigation and analysis performed by CTE the project is considered feasible if the recommendations contained herein are incorporated into the design and construction of the project. References utilized in the investigation and analyses cited are presented in Appendix A.

1.2 Scope of Services

The scope of services provided for this investigation included:

- Review of readily available geologic reports and documents pertinent to the site area.
- Explorations to determine subsurface conditions to the depths influenced by the proposed construction.
- Laboratory testing of representative soil samples to provide data to evaluate the geotechnical design characteristics of the site foundation soils.
- Determination of the general geology and evaluation of potential geologic seismic hazards at the site.
- Preparation of this report describing the investigations performed and providing opinions/conclusions and geotechnical engineering recommendations for design and construction.

2.0 SITE AND PROJECT DESCRIPTION

The new travel plaza is to consist of design and construction of an 8 auto fuel island, 8 truck fuel island, a 4 bay shop, 16,499 SF building, parking lot, 2 retention ponds and associated site improvements. The proposed project consists of two parcels (APN 191-250-14 & 191-250-06), totaling approximately 21.7± acres is to be constructed at 11293 S. Manthey Road in Lathrop, California. The project is currently bound by Manthey Road to the East, agricultural and residential properties to the North and South, and undeveloped land the West,

At the time of our investigation, the project site consisted of an empty relatively flat lot. Upon reviewing Google Earth Historical Satellite Imagery, the site previously had a residential house on the West side of the property. The house appears to have been demolished and removed in 2017.

Figure 1, Site Index Map, at the end of this report, shows the general location of the sites. Figure 2, Exploration Map, shows the configuration of the proposed project.

3.0 FIELD AND LABORATORY INVESTIGATIONS

3.1 Field Investigations

The field exploration program included performing a site reconnaissance and excavating 4 exploratory borings and 2 percolation borings to determine the geometry and geotechnical characteristics of subsurface geologic deposits at the site areas proposed for new construction. Representative samples of the subsurface soil deposits were obtained from the soil boring for use in laboratory testing to determine the engineering properties and geotechnical parameters recommended for design. The borings (designated B-1 through B-4 and P-1 through P-2) were excavated using a truck-mounted drill rig using the auger diameter and depth specified in Appendix B.

The field subsurface exploration program included performing Standard Penetration Tests (SPT) using a standard split barrel sampler (1.4-inch inside diameter, 2-inch outside diameter) which was operated in accordance with ASTM D-1586. The drive sampler was utilized to

obtain samples of the subsurface soils at the depth intervals stated on the boring logs (see Appendix B) by driving the sampler into the bottom of the borehole with successive blows of a 140-pound auto hammer free-falling 30 inches. The number of blows required to drive the sampler three, six-inch intervals (18-inches total of sampler penetration) at each sampling location was recorded and the raw results of the drive sampler testing are shown on the boring logs (contained in Appendix B) in the column "Blows/6 inches". The standard penetration blow counts (N) were collected and used during the geotechnical engineering evaluation and analysis to correlate soil strength and structure bearing characteristics.

Soils were logged in the field by a CTE Field Geologist and were classified based on the Unified Soil Classification System (ASTM D2487), sampler drive resistance, field testing, and visual observations. Exploration logs prepared for each of the borings provide soil descriptions, and blow count data. The boring logs are included in Appendix B which also contains the Boring Log Legend and Definition of Soil Terminology as shown on Plates BL1 and BL2, respectively. The location of the test boring is shown on Figure 2 at the end of this report.

Relatively undisturbed soil samples were obtained from the drive sampler during exploration activities. The samples were collected in capped, stainless steel sample tubes or placed in zip lock plastic bags. Bulk soil samples, if applicable, were recovered directly from drill cuttings or were obtained from surface deposits and placed in sample bags.

Soil samples were then transported to CTE's laboratory for further testing. Field descriptions within the boring logs have been modified, where appropriate, to reflect laboratory test results. Upon completion of drilling, the borings were backfilled from final boring depth to original ground surface. Details of the soils encountered are shown on the Boring Logs which are presented in Appendix B.

3.1.1 Percolation Testing

Our subsurface geotechnical investigation included conducting a site storm water disposal soil suitability evaluation via percolation testing. The evaluation included the drilling and

testing of two percolation test holes drilled at the locations shown on Figure-2. The percolation test holes were drilled from existing lot grade to depths of 7 and 8-ft.

Groundwater was not encountered within the percolation test holes; however, it was encountered in boring B-1 at a depth of 30.5 ft BGS. These observations represent groundwater conditions at time of the field exploration and may not be indicative of other times, or at other locations. Groundwater conditions can vary with seasonal changes, local weather conditions, and, other factors.

3.1.2 Percolation Testing Procedure

Upon completion of the percolation hole drilling, the sides of the hole were scored to remove any smeared soil surfaces, loose material was removed, and 2 inches of a coarse sand were added the bottom of percolation hole. A 3-inch diameter open-ended slotted drain pipe was then installed to control potential sidewall caving of the test hole. Pre-saturation of the soils to be tested was accomplished by filling each test hole with water to a level of 6 inches above the sand 24 hours prior to test. During the testing a six-inch (minimum) column of water "dissipated" from each of the percolation test holes within 30 minutes or less. Percolation testing was then performed by adding water to a level of approximately 6± inches above the top of the 2 inches of sand placed at the base of each test hole. Recordings were made of the change (drop) in water level at regular time intervals and water level was refilled after each interval. Specific details are included on the attached percolation test data sheets located in Appendix-B.

3.1.3 Percolation and Infiltration Rates

The soil percolation rate is defined by the average time in minutes for a 1-inch column of water to "seep" into the soil. Percolation rate was calculated (in minutes per inch) by dividing the time (in minutes) by the change (drop) in water level (in inches). No correction factor was used in the calculation for boring diameter. Percolation test results are shown below in Table 3.1.3 Owing to variations in material type and depth, percolation rates would typically be expected

to fluctuate somewhat across a site and are also dependent upon actual construction, depth, size, location and workmanship of the drainage element.

The soils encountered were described as silty fine sand (SM). In general, the percolation rate is considered consistent with the soil types encountered at the site and the site location. Based on percolation test results, the soil conditions at the testing depths are not considered suitable for a storm water disposal system at the site. Owing to variations in material type and depth, percolation rates would typically be expected to fluctuate somewhat across a site and are also dependent upon actual construction, depth, size, location and workmanship of the drainage element.

The percolation test measures the length of time required for a quantity of water to infiltrate into the soil and is commonly referred to as the "percolation rate". It should be noted that the percolation rate is related to, but not equal to, the infiltration rate. An infiltration rate is a measure of the speed at which water progresses downward into the soil, the percolation rate measures not only the downward progression but the lateral progression through the soil as well. This reflects the fact that the surface area for infiltration testing would include only the horizontal surface while the percolation test includes both the bottom surface area and the sidewalls of the test hole.

The calculated conversion from percolation rate to infiltration rate is located in Appendix B. The resulting percolation rate in min/inch and Infiltration rates in gal/sf/day are listed in Table 3.1.3 below. The observed infiltration rates listed below do not include a safety factor.

TABLE 3.1.3 PERCOLATION RATES				
TEST NUMBER	DEPTH (ft)	MATERIAL TYPE	PERCOLATION RATE (Min/In)	OBSERVED INFILITRATION RATE (Gal/ft^2/day)
P-1	7	Silty Fine Sand (SM)	4.4	34.4

TABLE 3.1.3 PERCOLATION RATES				
TEST NUMBER	DEPTH (ft)	MATERIAL TYPE	PERCOLATION RATE (Min/In)	OBSERVED INFILITRATION RATE (Gal/ft²/day)
P-2	8	Silty Fine Sand (SM)	5.0	29.9

Based on percolation test results, as described above, the soil conditions at the site are considered suitable for a storm water disposal system in the vicinity of the proposed stormwater management basin.

3.1.4 Drainage Basin Side Slope Inclination

As is stated in Appendix D Standard Grading Recommendations Section 6.2 Cut Slopes "permanent cut slopes should not be steeper than 2:1 (Horizontal: Vertical) and Section 7.3 Fill Slopes "permanent fill slopes should not be steeper than 2:1 (Horizontal: Vertical). These recommendations are consistent and appropriate with regard to overall stability of drainage basin side slopes containing the silty fine sands (SM) to a depth of 7 feet BGS. With regard to the long-term geotechnical engineering performance of the site cut and fill slopes CTE Cal takes no exception to the construction of 3:1 (Horizontal: Vertical) drainage basin side slopes at the subject site.

3.2 Laboratory Testing Program

Laboratory tests were conducted on representative soil samples for classification purposes and to evaluate physical properties and engineering characteristics. Laboratory tests were conducted on representative soil samples collected from the borings. Geotechnical laboratory testing may include in situ moisture content, dry density, sieve analysis, relative fines content, Atterberg Limits, Expansion Index, R-Value testing and Consolidation testing, see Appendix C for specific tests performed. Test method descriptions and laboratory test results are presented in Appendix C.

4.0 GEOLOGY

4.1 General Geologic Setting

The site is located in the central San Joaquin Valley. The San Joaquin Valley is bounded by the Sacramento Valley to the North, the Sierra Nevada Mountain Range to the East, the San Emigdio and Tehachapi Mountains to the South, and the Coastal Ranges to the West. The floor of the San Joaquin valley consists of layered marine and nonmarine sedimentary rock deposits. These deposits are predominantly Pleistocene-Holoscene (2.6 million years ago to present) sedimentary rocks.

Based on geologic reconaissance and observations made within the test borings, materials encountered during the investigation were considered to be consistent with Modest formation (Qm) as shown on published regional geologic mapping "Geologic Map of the San Francisco-San Jose Quadrangle, California" (CDMG Regional Geologic Map 5A, Scale 1:250,000, 1991).

4.2 Generalized Soil Conditions

Soil materials encountered in our site explorations are consistent with the above referenced published geologic mapping. Soil materials encountered on site generally consisted of medium dense silty sand (SM) from the surface to approximately 7.5 feet BGS. The sands were underlain by interbedded layers of very stiff to hard low plastic silts (ML) and clays (CL) to the maximum explored depth of 30.5 ft BGS.

Since the earth material profile described above is generalized, the reader is advised to consult the Test Boring Log contained in Appendix B, if determination of the earth material conditions at a specific depth and location are desired. The boring logs contain a more detailed earth material description regarding color, earth material type, and Unified Soil Classification System (USCS) symbol. It should be noted that earth material conditions cannot be fully determined by test borings and earth material sampling and testing. Hence, unexpected earth material conditions might be encountered during construction. If soil deposits encountered during construction vary substantially from materials encountered during the investigation, appropriate recommendations will be made during construction.

Please contact CTE Cal if soil deposits encountered during construction vary substantially from materials encountered during the investigation

4.3 Groundwater Conditions

Observations of groundwater conditions were made in the test borings at the time of field exploration. Groundwater was encountered in the boring locations at an approximate depth of 30.5 feet BGS. Based on information contained on the California SGMA Data Viewer site (https://sgma.water.ca.gov/webgis/?appid=SGMADataViewer#gwlevels), ground water levels measured as groundwater contour lines near the site are typically between 20 to 40 feet BGS in the fall and spring seasons.

Groundwater levels can fluctuate on a seasonal basis due to changes in precipitation, irrigation, pumping, etc., and might increase above the levels. With proper drainage groundwater is not expected to affect the proposed development. However, excavations below groundwater level will be impacted by seepage; therefore, we recommend grading and utility excavations be performed during dry-season when ground water levels are lowest.

If construction is undertaken during wet-season/heavy-rains, saturated soils will not be expected to be acceptable for grading or compaction and could hamper progress due to limited equipment mobility and/or inability to achieve appropriate moisture content to achieve required soil compaction. Saturated soils resulting from significant precipitation events may need to be dried by aeration or an additive, such as lime, cement, or kiln dust added to stabilize the working surface and allow for proper soil compaction. Moisture conditioning (drying or wetting) of the engineered fill will likely be needed for the project. Appropriate erosion control and permanent site surface drainage elements per the latest California Building Code should be designed and implemented as per the project civil engineer.

4.4 Geologic Hazards

Based on the investigation it appears that geologic hazards at the site are primarily limited to those caused by violent shaking from earthquake generated ground motion waves. The

subject site is not located within a seismic hazard zone for susceptibility to liquefaction or landslides. The subject site is not in an Alquist-Priolo special studies zone.

The underlying undisturbed soils encountered are considered adequate for support of moderately loaded structures with conventional shallow foundations. The soil conditions, groundwater level, and relatively short distances to several faults are significant geotechnical concerns that also control the selection of suitable foundation support for the proposed improvements. Design and construction recommendations presented herein have been developed based on the noted site conditions.

4.5 General Geologic Hazards Observation

Based on the site reconnaissance and review of the referenced literature, the site is not within a State of California-designated Alquist-Priolo Earthquake Fault Studies Zone (http://maps.conservation.ca.gov/cgs/fam/), and no known active fault traces shown on published hazard mapping underlie or project toward the site. According to the California Division of Mines and Geology, a fault is active if it displays evidence of activity in the last 11,000 years (Hart and Bryant, revised 2007). Therefore, the potential for surface rupture from displacement or fault movement directly beneath the proposed improvements is considered low.

4.6 Local and Regional Faulting

The California Geological Survey (CGS) and the United States Geological Survey (USGS) broadly group faults as “Class A” or “Class B”. Class A faults are identified based upon relatively well-defined paleoseismic activity, and a fault-slip rate of more than 5 millimeters per year (mm/yr). In contrast, Class B faults have comparatively less defined paleoseismic activity and typically have a fault-slip rate less than 5 mm/yr. The nearest faults are listed in Table 4.6. (U.S. Geological Survey (CGS), 2006, Quaternary fault and fold database for the United States, accessed 8/31/2022 USGS website (https://earthquake.usgs.gov/cfusion/hazfaults_2008_search/query_results.cfm)

TABLE 4.6 NEAR SITE FAULT PARAMETERS			
FAULT NAME	DISTANCE FROM SITE (MILES)	MAXIMUM EARTHQUAKE MAGNITUDE	SLIP RATE (MM/YR)
Great Valley 7	15.10	6.90	1.5

Great Valley 8	29.84	6.80	1.5
Mount Diablo Thrust	30.71	6.70	2
Great Valley 5, Pittsburg Kirby Hills	32.58	6.70	1
Calaveras;CN	36.96	6.87	6

4.7 Liquefaction and Seismic Settlement Evaluation

Liquefaction occurs when saturated fine-grained sands and/or silts lose their physical strength temporarily during earthquake induced shaking and behave as a liquid. This is due to loss of point-to-point grain contact and transfer of normal stress to the pore water. Liquefaction potential varies with water level, soil type, material gradation, relative density, and probable intensity and duration of ground shaking.

The California Geological Survey (CGS) has designated certain areas within California as potential liquefaction hazard zones. These mapped areas are considered at risk of liquefaction-related ground failure during a seismic event based upon mapped surficial deposits. The project site is not currently mapped for potential liquefaction hazard by the CGS (refer to CGS website: (http://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=regulatorymaps). Based on readily available published geologic information, there is no historical record of liquefaction occurring at the site.

Based on our explorations the near surface soil deposits at the site consist of approximately 7.5 ft of medium dense silty sand followed by interbedded layers of very stiff to hard low plastic silts and clays (ML and CL) to the maximum explored depth of 31.5. Groundwater was

encountered at a depth of 30.5 ft BGS. Based on the site location, the relatively low intensity of ground shaking expected, the relatively deep ground water and the consistency of the subsurface materials, the possibility of large differential settlements due to seismic dry sand settlement or liquefaction is considered low. Therefore, the potential for catastrophic building collapse due to a seismic liquefaction event are considered not significant.

4.8 Earthquake Induced Landsliding

Based on information available on the California Geological Survey (CGS) website (http://maps.conservation.ca.gov/cgs/lsi/) the subject site is not currently mapped within a State of California Seismic Hazard Zone for seismically induced landsliding. The project site is relatively flat lying, therefore the seismically induced landsliding hazard is considered low.

4.9 Tsunamis and Seiche Evaluation

Based on site location, elevation, and tsunami hazard mapping from the CGS website (http://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=tsunami) the site is not in a tsunami inundation hazard zone. In addition, oscillatory waves (seiches) are considered unlikely due to the absence of large confined bodies of water in the site area.

4.10 Compressible and Expansive Soils

Earth materials encountered at the site within the zone of influence of the proposed foundation system are described as hard and medium dense. These soils are not considered subject to significant compression under anticipated loads.

The near surface soils encountered during our investigation are also classified as low plastic and with low expansion potential and therefore would be expected to exhibit low volume change upon wetting or drying.

4.11 Soil Corrosion Potential

Assessment for potential of soil corrosion on construction materials was not included as part of this investigation. We recommend your corrosion engineer determine the potential

corrosive characteristics of the on-site soils with respect to contact with the various underground materials that will be used for project construction.

4.12 Flooding Hazard Potential

Based on FEMA flood zone maps for City of Lathrop, California, Map No. 06077C0610F, (200+) to assess the potential for flooding of the site. Based on a review of the noted map, the site is in a designated zone, "AREA WITH REDUCED FLOOD RISK DUE TO LEVEE - Zone X", areas protected by levees from 1% annual chance flood.

5.0 CONCLUSIONS AND RECOMMENDATIONS

We conclude that the proposed construction is feasible from a geotechnical standpoint, provided the recommendations in this report are incorporated into the design of the project. Recommendations for the design and construction of the proposed structures and associated improvements are included below.

5.1 Site Preparation

Project site stripping should include the demolition, removal and disposal of all asphalt and concrete debris, vegetation and other organic material in all proposed building pad, and improvement areas. Loose, wet or otherwise unstable soil in the proposed improvement area should be excavated and evaluated by CTE for possible re-use as engineered fill or disposed of offsite. Utilities that extend into the construction area and are scheduled to be abandoned should be properly capped at the perimeter of the construction zone or moved as directed in the plans. CTE personnel shall observe and confirm that all asphalt and concrete debris, vegetation, and other organic material has been adequately removed in all proposed improvement areas.

5.2 Grading and Earthwork

Based on the current proposed development and the subsurface soils encountered during our excavations CTE recommends that proposed structure areas should be overexcavated to the

depth stated in Table 5.2. The building pad overexcavation should extend to a minimum distance of at least 5 feet outside of all proposed structure areas if possible.

The exposed over excavated surface should then be scarified to a depth of approximately 12 inches, moisture conditioned and recompacted to the moisture and relative compaction required in Table 5.2. Moisture density relationship shall be established in accordance with ASTM D1557. The compaction percent listed in Table 5.2 shall be based on percent relative compaction when compared to the maximum dry density determined in accordance with ASTM D1557. Additional engineered fill, if required, shall then be placed in 8 inch loose lifts, moisture conditioned and compacted in accordance with Table 5.2.

After stripping in pavement improvement areas is conducted, the stripped areas should be overexcavated to 12 inches below the proposed pavement subgrade. The excavated surface should then be scarified to a minimum depth of 12 inches, moisture conditioned and recompacted to the moisture and relative compaction required in Table 5.2. Moisture-density relationship shall be established in accordance with ASTM D1557. Proof rolling with heavy equipment shall be performed with CTE Cal present to confirm that subgrade is compacted, stable and does not deflect under heavy equipment loads. Additional engineered fill, if required, shall then be placed in 8-inch loose lifts, moisture conditioned and compacted in accordance with Table 5.2.

Soils generated from the site are expected to be acceptable for engineered fill provided the debris and organic materials are removed from the soils. The moisture content of the soil may be significantly higher or lower than the moisture range required for compaction. Import soils proposed for engineered fill should consist of soil deposits having an Expansion Index EI < 20 or liquid limit less than 30 (LL<30) and a plasticity index less than 12 (PI< 12), with no particles greater than 3 inches and 20 to 80% of the soil particles passing the #200 sieve. Imported fill meeting these requirements should be placed in 8 inch loose lifts, moisture conditioned and compacted to the moisture content and percent relative compaction stated

in table 5.2. A CTE representative should approve all imported soils prior to delivery to the site.

If unanticipated, unsuitable or unstable materials are encountered at the surface improvement subgrade or structure over-excavation such that proper compacted and stable materials cannot be obtained, over-excavations to remove such materials may be required. CTE shall inspect and approve all structure over-excavations, pavement and surface improvement subgrade areas to confirm that adequate soil conditions have been reached. CTE shall also observe and approve the scarification, moisture conditioning and recompaction of the excavated surfaces and the placement of all engineered fill.

TABLE 5.2
GRADING AND EARTHWORK

GRADING SCOPE	RECOMMENDATION
Overexcavation	Scarify foundation and pavement areas 12 inches, scarify 12 inches, moisture condition, and recompact
Compaction and Moisture Requirements	**Location** / **Material** / **Moisture** / **Compaction** Foundation Bearing / Native / Optimum / 90% Foundation Bearing / Import Fill / Optimum / 90% Pavement Areas / Native / Optimum / 95% Pavement Areas / Import Fill / Optimum / 95%
Testing Frequency	**Location** / **Frequency*** Building Pad / 1 per 2500 square ft Utility Trenches / 1 per 150 linear ft Pavement Areas / 1 per 2500 square ft *Minimum one test per lift and one per day.

5.3 Structure Foundation Recommendations

CTE anticipates it will be feasible to utilize reinforced continuous and isolated spread footing foundations to support the proposed structures as the subject site.. It is recommended that these structure foundations be supported upon properly compacted engineered fill per the requirements stated in Section 5.2. Foundation dimensions and reinforcement should be based on the allowable soil bearing values stated in Table 5.3. Footing widths should be at least the widths stated in Table 5.3 or as determined by the project structural engineer. The

footings should penetrate into and be embedded below building pad subgrade to the depth stated in Table 5.3.

Continuous perimeter spread footings should extend around the entire perimeter of the buildings including all door openings. The allowable foundation bearing pressures apply to dead loads plus design live load conditions. The design bearing pressure may be increased by one-third when considering total loads that include short duration wind or seismic conditions. The weight of the foundation concrete below grade may be neglected in dead load computations. The weight of the footing should be neglected in the above downward capacity calculations.

We recommend that all footings be reinforced as required by the structural engineer to provide structural continuity, to permit strong spanning of local irregularities, and to be rigid enough to accommodate potential differential static movements estimated at about one-half inch over 20 linear feet. CTE recommends that at a minimum footing reinforcement should consist of at least code required minimum reinforcement with proper cover. Isolated spread footings should be reinforced in accordance with the requirements of the structural engineer.

Based on soil conditions observed at the site, the total static structure settlement is expected to be controlled by either static compression or consolidation. Dynamic settlement due to an earthquake event is in addition to the static settlement. See Table 5.3 for expected structure settlements.

The foundation excavations should be clean (i.e., free of all loose slough) and wetted prior to placing steel and concrete. Foundation excavations should be moisture conditioned to the moisture condition stated in Table 5.2 and verified by CTE no longer than 24 hours prior to foundation concrete placement and the placement of vapor barriers. The concrete for the foundation should not be placed against a dry excavation surface. Concrete should be pumped or placed by means of a tremie or elephant's trunk to avoid aggregate segregation and earth contamination. The concrete should be properly vibrated to mitigate formation of

voids and to promote bonding of the concrete to steel reinforcing. These recommendations are predicated upon CTE's representative observing the bearing materials as well as the manner of concrete placement.

CTE's geotechnical engineer or his representative should observe soil conditions exposed in foundation excavations and shall test the foundation excavations to assure the proper moisture content has been achieved prior to footing placement. If the soil conditions encountered differ significantly from those presented in this report, then supplemental recommendations from CTE will be required.

TABLE 5.3
STRUCTURE FOUNDATION RECOMMENDATIONS

SYSTEM PARAMETERS

Type	Bearing Capacity	Minimum Width	Minimum Embedment
Spread	3000 psf	24 inches	24 inches
Continuous	3000 psf	12 inches	24 inches

SETTLEMENT

Settlement Type	Settlement	Differential Settlement
Consolidation	N/A	N/A
Static Compression	½ inch	¼ inch
Dynamic	½ inch	¼ inch
Total	1 inch	½ inch

5.4 Lateral Load Resistance

Shallow footings may be designed to resist lateral loads using the coefficient of friction stated in Table 5.4 (total frictional resistance equals the coefficient of friction times the dead load). The design passive resistance value stated in Table 5.4 may be used. The allowable lateral resistance can be taken as the sum of the frictional resistance and the passive resistance, provided the passive resistance does not exceed two-thirds of the total allowable resistance.

TABLE 5.4 LATERAL LOAD RESISTANCE	
Parameter	**Value**
Coefficient of Friction	0.3
Design Passive Resistance	250 psf/ft
Maximum Design Passive Resistance	1250 psf

5.5 Retaining Walls

Free draining retaining walls backfilled using select permeable onsite soils or import fill per the preceding section of this report, may be designed using the equivalent fluid weights given in the table below. These values are also considered suitable for permanent shoring, if proposed.

TABLE 5.5 EQUIVALENT FLUID UNIT WEIGHTS (pounds per cubic foot)		
WALL TYPE	LEVEL BACKFILL	SLOPE BACKFILL 2:1 (HORIZONTAL: VERTICAL)
Cantilevered Wall	40	60
Restrained Wall	60	80

Traffic surcharges on retaining walls should generally be equal to 1/3 of the vertical load of the traffic located within ten lateral feet of wall. Lateral pressures on cantilever retaining walls (yielding walls) due to earthquake motions may be calculated based on work by Seed and Whitman (1970). The total lateral thrust against a properly drained and backfilled cantilever retaining wall above the groundwater level can be expressed as:

$$P_{AE} = P_A + \Delta P_{AE}$$

For non-yielding (or "restrained") walls, the total lateral thrust may be similarly calculated based on work by Wood (1973):

$$P_{KE} = P_K + \Delta P_{KE}$$

Where P_A = Static Active Thrust (given in previous Table)

P_K = Static Restrained Wall Thrust (given in previous Table)

ΔP_{AE} = Dynamic Active Thrust Increment = (3/8) $k_h \gamma H^2$

ΔP_{KE} = Dynamic Restrained Thrust Increment = $k_h \gamma H^2$

k_h = ½ Peak Ground Acceleration = ½ (S_{DS}/2.5)

H = Total Height of the Wall

γ = Total Unit Weight of Soil ≈ 125 pounds per cubic foot

The increment of dynamic thrust in both cases should be based on a trapezoidal distribution (essentially an inverted triangle), with a line of action located at 0.6H above the bottom of the wall. The values above assume non-expansive backfill and free-draining conditions. Additional information for dynamic and static loading conditions for specific retaining structures can be provided on request from CTE. Measures should be taken to prevent moisture buildup behind all retaining walls. Drainage measures should include free-draining backfill materials and sloped, perforated drains. These drains should discharge to an appropriate off-site location. Waterproofing should be as specified by the project architect.

5.6 Foundation Setback

The bottoms of all utility trenches placed along the perimeter of the foundations should be above an imaginary plane that projects at a 45-degree angle down from the lowest outermost edge of the foundation. Where trenches pass through the plane, the trench should be installed perpendicular to the face of the foundation for a distance of at least the depth of the foundation. Deepening of affected foundation is considered an effective means of attaining the prescribed setbacks.

Foundations should be offset from slopes by at least one-third the slope height. The offset from slopes steeper than 1H:1V should be increased by the projection of a 45° plane from the slope toe. The offset distance should be measured to the nearest edge of the foundation base. Deepening the footing is considered a valid way to achieve the required slope offset.

5.7 Concrete Slabs-On-Grade

Lightly loaded concrete slabs-on-ground placed beneath the structures should be designed for the anticipated loadings, but measure at least 4 inches in thickness. Concrete slabs exposed to vehicular traffic should measure at least 5 inches in thickness. Slab-on-grade reinforcement should consist of at least the minimum reinforcement required by ACI, placed at or above mid-slab height, but with proper cover. Control joints at appropriate spacing i.e. 12 feet each way should be saw-cut into the slab after concrete placement in accordance with ACI Design Manual, Section 302.1R-37 8.3.12 (tooled control joints are not recommended).

All interior slab on grade areas shall be underlain by a capillary moisture break consisting of a 4" layer of ¾" minus crushed rock or Class 2 base. Prior to the installation of the capillary moisture barrier the existing subgrade shall be wetted to at least 3% above optimum moisture content as verified by a CTE representative no longer the 24 hours prior to concrete slab placement. All interior slab on grade located in moisture sensitive areas should be directly underlain by a minimum 15-mil thickness vapor retarder meeting the requirements of ASTM E1745 - Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs, with all laps or penetrations sealed or taped. The vapor retarder should be installed above the capillary moisture break which in turn overlies the compacted building pad. The use of sand above the vapor retarder is not recommended. The concrete to be placed into the slab on grade shall have a water to cement ratio w/c $\leq$ 0.45 and be placed at a maximum slump of 4".

CTE Cal does not practice in the field of moisture vapor transmission evaluation and mitigation. Therefore, we recommend that a qualified firm be engaged with to evaluate the general and specific moisture vapor transmission paths and any impact on the proposed construction. This firm should provide recommendations for mitigation of potential adverse impact of moisture vapor transmission on various components of the structure as deemed appropriate.

5.8 Seismic Design Criteria

Soils that underlie the site are considered to be consistent with Site Class D materials. Site ground motion with 10% probability of exceedance in 50 years is presented in Table 5.8, below. The table is based on the United States Geological Survey's (USGS) Probabilistic Seismic Design Maps through the third party interface ATC Hazards by Location Tool website (https://hazards.atcouncil.org/#/seismic?) for the site coordinates 37.8555319° latitude and -121.284538° longitude. The referenced USGS design maps are based on the design code reference document, ASCE 7-16 Standard with the 2019 California Building Code.

TABLE 5.8
SEISMIC GROUND MOTION VALUES

PARAMETER	VALUE	REFERENCE
Risk Category[1]	II	CBC (2019) Table 1604.5
Site Class[2]	D	ASCE 7-16, Chapter 20
Mapped Spectral Response Acceleration Parameter, S_S	0.797g	ASCE 7-16 Figure 22-1
Mapped Spectral Response Acceleration Parameter, S_1	0.302g	ASCE 7-16 Figure 22-2
Seismic Coefficient, F_a	1.200	CBC (2019) Table 1613.2.3 (1)
Seismic Coefficient, F_v[3]	1.998	CBC (2019) Table 1613.2.3 (2) ASCE 7-16 Section 11.4.8

Seismic Design Category	D	ASCE 7-16, Chapter 11

TABLE 5.8 SEISMIC GROUND MOTION VALUES		
PARAMETER	VALUE	REFERENCE

[1] Risk Category is based on an assumed nature of occupancy based on CTE Cal's understanding of project scope. Seismic design values may change based on actual occupancy type of the proposed construction.
[2] The 2019 CBC requires a site soil profile determination extending to a depth of 100 feet for seismic site classification. Borings for this study extended to a maximum depth of 31.5± feet, and this seismic site class definition considers soils below this depth to be consistent with the soils encountered at shallower depths.
[3] F_v is calculated in accordance with ASCE 7-16 Table 11.4-2 assuming that the exception for Site Class D with S_1 greater than or equal to 0.2 will be applied.
[4] S_{M1} is calculated in accordance with ASCE 7-16 Section 11.4.4
[5] S_{D1} is calculated in accordance with ASCE 7-16 Section 11.4.5

Per ASCE 7-16 Section 11.4.8, a site-specific ground motion procedure would be required for the structure since the site falls under Class D, and the S_1 parameter is greater than or equal to 0.2. However, Exception (2) permits the use of the Code-Based ground motion values if the seismic response coefficient C_s is amplified by 1.5 times for the period range $T \geq 1.5T_s$ using equations 12.8-3 and 12.8-4 in ASCE 7-16. If the proposed developments have a period in the range exceeding $1.5T_s$, then the base shear coefficient must be increased as required by ASCE 7-16.

5.9 Pavement Section Alternatives

It is understood asphaltic or concrete pavement is proposed for the site. The subgrade beneath all pavements should be moisture conditioned and compacted in accordance with Table 5.2 as per ASTM D1557. Pavements should be designed and constructed according to California Department of Transportation (Caltrans) standards.

The pavement design sections listed below are based on Caltrans Highway Design Manual, using the recommended R-Value for subgrade soils as listed in Table 5.9, and on anticipated traffic indices as indicated below. If these assumptions are incorrect, then this office should be contacted to obtain further pavement recommendations.

TABLE 5.9
RECOMMENDED PAVEMENT SECTIONS

Traffic Area	Assumed Traffic Index	Subgrade "R"-Value	Asphalt Pavements		Portland Cement Concrete Pavements**	
			AC Thickness (inches)	Class II AB* Thickness (inches)	PCC Thickness (inches)	Class II AB* Thickness (inches)
Parking Aisles	5.0	10	3.0	9	4	4
Auto Drive and Parking Areas	6.0	10	4.0	11	5	4
Pavement Truck and Bus Loading & Drive New Pavement Areas	7.0	10	4.0	15	6	4
Heavy Pavement Truck and Bus Loading & Drive New Pavement Areas	8.0	10	5.0	16	7	4

* Caltrans class 2 aggregate base, ** Concrete should have a modulus of rupture of at least 600 psi

To significantly reduce concrete shrinkage cracking concrete pavements should be reinforced with code required minimum reinforcement placed at above mid-slab height, but with proper concrete cover, or as designed by the structural designer. Concrete pavements not supporting heavy traffic could be unreinforced provided they are constructed with expansion/contraction and/or construction joints spaced no greater than 24 times the pavement thickness, both ways, in nearly square patterns, and are detailed in general accordance with ACI Guidelines. Doweling of concrete pavements at critical pathways is also recommended.

Asphalt concrete paved areas should be designed, constructed, and maintained in accordance with, for example, the recommendations of the Asphalt Institute, or other widely recognized authority. Concrete paved areas should be designed and constructed in accordance with the recommendations of the American Concrete Institute or other widely recognized authority, particularly with regard to thickened edges, joints, and drainage. The Standard Specifications for Public Works construction ("Greenbook") or Caltrans Standard Specifications may be referenced for pavement materials specifications.

5.10 Drainage

Foundation and concrete-slab-on grade performance depends greatly on how well the runoff waters drain from the site. This is true both during construction and over the entire life of the structure. The ground surface around structures should be graded so that water flows rapidly away from the structures without ponding. The surface gradient needed to do this depends on the landscaping type.

Should excessive irrigation, waterline breaks, or unusually high rainfall occur, saturated zones and groundwater may develop. Consequently, the site should be graded so that water drains away readily without saturating the foundation or landscaped areas or cascading over slope faces. A potential source of water, such as water pipes, drains, and the like should be frequently examined for signs of leakage or damage. Any such leakage or damage should be repaired promptly. The project Civil Engineers should thoroughly evaluate the on-site drainage and make provisions as necessary to keep surface waters from affecting the site.

5.11 Construction Observation

The recommendations provided in this report are based on limited subsurface information observed, at locations, and within, exploratory borings performed for this project and preliminary concept design proposed construction as of the date of publication. The interpolated subsurface conditions, on which this report relies, should be checked in the field during construction to verify conditions described herein are as anticipated. Any changes which occur to preliminary information provided to this office as of the date of this publication, this office should be notified and afforded an opportunity to update information provided in this report.

Recommendations provided in this report are based on the understanding and assumption that CTE will provide the observation and testing services for the project. All earthworks should be observed and tested to verify that grading activity has been performed according to the recommendations contained within this report. The project engineer should evaluate all footing excavations before reinforcing steel placement. To assure that the recommendations

contained within this report are adhered to the following minimum inspection and testing services should be performed with regard to the geotechnical design of the project.

1. Continuous observation and testing during mass grading.
2. Footing excavation inspection.
3. Periodic Utility trench backfill testing for moisture and relative compaction.
4. Slab subgrade inspection and testing prior to the placement of capillary moisture break materials for moisture and relative compaction.
5. Pavement Class 2 Base inspection and testing prior to the placement of asphalt or concrete pavement.
6. Asphalt relative compaction testing during pavement placement. (Optional)

5.12 Plan Review

CTE should review project grading and foundation plans before the start of earthworks to identify potential conflicts and to verify that the recommendations contained in the report are to be implemented.

6.0 LIMITATIONS OF INVESTIGATION

As indicated, the recommendations presented herein are based on the field exploration, laboratory testing and our geologic and engineering analysis. Following initiation of field testing, these recommendations will be confirmed and or modified, if necessary, based on the materials exposed and re-worked during grading.

The field evaluation, laboratory testing and geotechnical analysis presented in this report have been conducted according to current engineering practice and the standard of care exercised by reputable geotechnical consultants performing similar tasks in this area. No other warranty, expressed or implied, is made regarding the conclusions, recommendations and opinions expressed in this report.

Variations may exist and conditions not observed or described in this report may be encountered during construction. Our conclusions and recommendations are based on an analysis of the observed conditions. If conditions different from those described in this report are encountered, our office should be notified and additional recommendations, if required, will be provided upon request.

We appreciate the opportunity to be of service on this project. Should you have any questions or need further information please do not hesitate to contact this office.

Respectfully submitted,

CTE Cal, INC.

Mike Kennedy, PE 88971
Project Engineer

Selena Gray, EIT
Staff Engineer

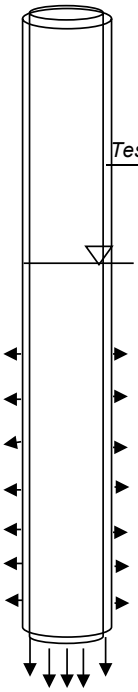
CTE CAL,INC. 4230 Kiernan Ave., Ste. 150 | Modesto, CA 95356 | Ph: (209) 543 - 1799 | Fax: (209) 543-1775

CTE# 25-1278G

INFILTRATION RATE PER PORCHET METHOD

Reference: "Riverside County-Low Impact Development BMP Design Handbook" (Page 20)



Percolation Data at the Final Interval

Test No.	*Radius*	*Time Interval (Δt)*	*Initial Depth of Water in inches (D_o)*	*Final Depth of Water in inches (D_f)*	*Change in Height of Water in inches (ΔH)*	*Average Head Over Time Interval in inches (H_{avg})*
P-1:	2.0	10.00	6.00	3.75	2.25	4.88
P-2:	2.0	10.00	6.00	4.00	2.00	5.00

Infiltration Rate $It=(\Delta H\ 60\ r)/\Delta t(r+2H_{avg})$

P-1: It = (2.25 in)(60 min/hr)(2 in) / (10 min) (2 in + 2(4.88 in))= 2.30 in/hr

P-2: It = (2.00 in)(60 min/hr)(2 in) / (10 min) (2 in + 2(5.00 in))= 2.00 in/hr

Infiltration Rate in gal/sf/day = (It in/hr)(24 hr/day)(7.48 gal / cf)(ft/12 in)

P-1= ((2.30)(24)(7.48))/12= 34.4 gal/sf/day

P-1= ((2.00)(24)(7.48))/12= 29.9 gal/sf/day

APPENDIX C

LABORATORY METHODS AND RESULTS

Laboratory tests were performed on representative soil samples to detect their relative engineering properties. Tests were performed following test methods of the American Society for Testing Materials or other accepted standards. The following presents a brief description of the various test methods used. The result of the laboratory tests is presented on the test boring logs or following this Appendix section.

Natural Moisture Content

The procedure of ASTM D2216 was used to measure the moisture content of representative samples.

Classification

Soils were classified visually according to the Unified Soil Classification System. Visual classifications were supplemented by laboratory testing of selected samples according to ASTM D2487.

Atterberg Limits

The procedure of ASTM D4318 was used to measure the liquid limit, plastic limit and plasticity index of representative samples.

Material Finer than No. 200 Sieve

Particle-size analyses were performed on selected representative samples according to ASTM D1140.

APPENDIX D

STANDARD SPECIFICATIONS FOR GRADING

Section 1 - General

CTE, Cal, Inc. (CTE) presents the following standard recommendations for grading and other associated operations on construction projects. These guidelines should be considered a portion of the project specifications. Recommendations contained in the body of the previously presented soils report shall supersede the recommendations and or requirements as specified herein. The project geotechnical consultant shall interpret disputes arising out of interpretation of the recommendations contained in the soils report or specifications contained herein.

Section 2 - Responsibilities of Project Personnel

The geotechnical consultant should provide observation and testing services sufficient to general conformance with project specifications and standard grading practices. The geotechnical consultant should report any deviations to the client or his authorized representative.

The Client should be chiefly responsible for all aspects of the project. He or his authorized representative has the responsibility of reviewing the findings and recommendations of the geotechnical consultant. He shall authorize or cause to have authorized the Contractor and/or other consultants to perform work and/or provide services. During grading the Client or his authorized representative should remain on-site or should remain reasonably accessible to all concerned parties in order to make decisions necessary to maintain the flow of the project.

The Contractor is responsible for the safety of the project and satisfactory completion of all grading and other associated operations on construction projects, including, but not limited to, earth work in accordance with the project plans, specifications and controlling agency requirements.

Section 3 - Preconstruction Meeting

A preconstruction site meeting should be arranged by the owner and/or client and should include the grading contractor, design engineer, geotechnical consultant, owner's representative and representatives of the appropriate governing authorities.

Section 4 - Site Preparation

The client or contractor should obtain the required approvals from the controlling authorities for the project prior, during and/or after demolition, site preparation and removals, etc. The appropriate approvals should be obtained prior to proceeding with grading operations.

Clearing and grubbing should consist of the removal of vegetation such as brush, grass, woods, stumps, trees, root of trees and otherwise deleterious natural materials from the areas to be graded. Clearing and grubbing should extend to the outside of all proposed excavation and fill areas.

Demolition should include removal of buildings, structures, foundations, reservoirs, utilities (including underground pipelines, septic tanks, leach fields, seepage pits, cisterns, mining shafts, tunnels, etc.) and other man-made surface and subsurface improvements from the areas to be graded. Demolition of utilities should include proper capping and/or rerouting pipelines at the project perimeter and cutoff and capping of wells in accordance with the requirements of the governing authorities and the recommendations of the geotechnical consultant at the time of demolition.

Trees, plants or man-made improvements not planned to be removed or demolished should be protected by the contractor from damage or injury.

Debris generated during clearing, grubbing and/or demolition operations should be wasted from areas to be graded and disposed off-site. Clearing, grubbing and demolition operations should be performed under the observation of the geotechnical consultant.

Section 5 - Site Protection

Protection of the site during the period of grading should be the responsibility of the contractor. Unless other provisions are made in writing and agreed upon among the concerned parties, completion of a portion of the project should not be considered to preclude that portion or adjacent areas from the requirements for site protection until such time as the entire project is complete as identified by the geotechnical consultant, the client and the regulating agencies.

Precautions should be taken during the performance of site clearing, excavations and grading to protect the work site from flooding, ponding or inundation by poor or improper surface drainage. Temporary provisions should be made during the rainy season to adequately direct surface drainage away from and off the work site. Where low areas cannot be avoided, pumps should be kept on hand to continually remove water during periods of rainfall.

Rain related damage should be considered to include, but may not be limited to, erosion, silting, saturation, swelling, structural distress and other adverse conditions as determined by the geotechnical consultant. Soil adversely affected should be classified as unsuitable materials and should be subject to overexcavation and replacement with compacted fill or other remedial grading as recommended by the geotechnical consultant.

The contractor should be responsible for the stability of all temporary excavations. Recommendations by the geotechnical consultant pertaining to temporary excavations (e.g., backcuts) are made in consideration of stability of the completed project and, therefore, should not be considered to preclude the responsibilities of the contractor. Recommendations by the geotechnical consultant should not be considered to preclude requirements that are more restrictive by the regulating agencies. The contractor should provide during periods of extensive rainfall plastic sheeting to prevent unprotected slopes from becoming saturated and unstable. When deemed appropriate by the geotechnical consultant or governing agencies the contractor shall install checkdams, desilting basins, sand bags or other drainage control measures.

In relatively level areas and/or slope areas, where saturated soil and/or erosion gullies exist to depths of greater than 1.0 foot; they should be overexcavated and replaced as compacted fill in accordance with the applicable specifications. Where affected materials exist to depths of 1.0 foot or less below proposed finished grade, remedial grading by moisture conditioning in-place, followed by thorough recompaction in accordance with the applicable grading guidelines herein may be attempted. If the desired results are not achieved, all affected materials should be overexcavated and replaced as compacted fill in accordance with the slope repair recommendations herein. If field conditions dictate, the geotechnical consultant may recommend other slope repair procedures.

Section 6 - Excavations

6.1 Unsuitable Materials

Materials that are unsuitable should be excavated under observation and recommendations of the geotechnical consultant. Unsuitable materials include, but may not be limited to, dry, loose, soft, wet, organic compressible natural soils and fractured, weathered, soft bedrock and nonengineered or otherwise deleterious fill materials.

Material identified by the geotechnical consultant as unsatisfactory due to its moisture conditions should be overexcavated; moisture conditioned as needed, to a uniform at or above optimum moisture condition before placement as compacted fill.

If during the course of grading adverse geotechnical conditions are exposed which were not anticipated in the preliminary soil report as determined by the geotechnical consultant additional exploration, analysis, and treatment of these problems may be recommended.

6.2 Cut Slopes

Unless otherwise recommended by the geotechnical consultant and approved by the regulating agencies, permanent cut slopes should not be steeper than 2:1 (horizontal: vertical).

The geotechnical consultant should observe cut slope excavation and if these excavations expose loose cohesionless, significantly fractured or otherwise unsuitable material, the materials should be overexcavated and replaced with a compacted stabilization fill. If encountered specific cross section details should be obtained from the Geotechnical Consultant.

When extensive cut slopes are excavated or these cut slopes are made in the direction of the prevailing drainage, a non-erodible diversion swale (brow ditch) should be provided at the top of the slope.

6.3 Pad Areas

All lot pad areas, including side yard terrace containing both cut and fill materials, transitions, located less than 3 feet deep should be overexcavated to a depth of 3 feet and replaced with a uniform compacted fill blanket of 3 feet. Actual depth of overexcavation may vary and should be delineated by the geotechnical consultant during grading, especially where deep or drastic transitions are present.

For pad areas created above cut or natural slopes, positive drainage should be established away from the top-of-slope. This may be accomplished utilizing a berm drainage swale and/or an appropriate pad gradient. A gradient in soil areas away from the top-of-slopes of 2 percent or greater is recommended.

Section 7 - Compacted Fill

All fill materials should have fill quality, placement, conditioning and compaction as specified below or as approved by the geotechnical consultant.

7.1 Fill Material Quality

Excavated on-site or import materials which are acceptable to the geotechnical consultant may be utilized as compacted fill, provided trash, vegetation and other deleterious materials are removed prior to placement. All import materials anticipated for use on-site should be sampled tested and approved prior to and placement is in conformance with the requirements outlined.

Rocks 12 inches in maximum and smaller may be utilized within compacted fill provided sufficient fill material is placed and thoroughly compacted over and around all rock to effectively fill rock voids. The amount of rock should not exceed 40 percent by dry weight passing the 3/4-inch sieve. The geotechnical consultant may vary those requirements as field conditions dictate.

Where rocks greater than 12 inches but less than four feet of maximum dimension are generated during grading, or otherwise desired to be placed within an engineered fill, special handling in accordance with the recommendations below. Rocks greater than four feet should be broken down or disposed off-site.

7.2 Placement of Fill

Prior to placement of fill material, the geotechnical consultant should observe and approve the area to receive fill. After observation and approval, the exposed ground surface should be scarified to a depth of 6 to 8 inches. The scarified material should be conditioned (i.e. moisture added or air dried by continued discing) to achieve a moisture content at or slightly above optimum moisture conditions and compacted to a minimum of 90 percent of the maximum density or as otherwise recommended in the soils report or by appropriate government agencies.

Compacted fill should then be placed in thin horizontal lifts not exceeding eight inches in loose thickness prior to compaction. Each lift should be moisture conditioned as needed, thoroughly blended to achieve a consistent moisture content at or slightly above optimum and thoroughly compacted by mechanical methods to a minimum of 90 percent of laboratory maximum dry density. Each lift should be treated in a like manner until the desired finished grades are achieved.

The contractor should have suitable and sufficient mechanical compaction equipment and watering apparatus on the job site to handle the amount of fill being placed in consideration of moisture retention properties of the materials and weather conditions.

When placing fill in horizontal lifts adjacent to areas sloping steeper than 5:1 (horizontal: vertical), horizontal keys and vertical benches should be excavated into the adjacent slope area. Keying and benching should be sufficient to provide at least six-foot wide benches and a minimum of four feet of vertical bench height within the firm natural ground, firm bedrock or engineered compacted fill. No compacted fill should be placed in an area after keying and benching until the geotechnical consultant has reviewed the area. Material generated by the benching operation should be moved sufficiently away from

the bench area to allow for the recommended review of the horizontal bench prior to placement of fill.

Within a single fill area where grading procedures dictate two or more separate fills, temporary slopes (false slopes) may be created. When placing fill adjacent to a false slope, benching should be conducted in the same manner as above described. At least a 3-foot vertical bench should be established within the firm core of adjacent approved compacted fill prior to placement of additional fill. Benching should proceed in at least 3-foot vertical increments until the desired finished grades are achieved.

Prior to placement of additional compacted fill following an overnight or other grading delay, the exposed surface or previously compacted fill should be processed by scarification, moisture conditioning as needed to at or slightly above optimum moisture content, thoroughly blended and recompacted to a minimum of 90 percent of laboratory maximum dry density. Where unsuitable materials exist to depths of greater than one foot, the unsuitable materials should be over-excavated.

Following a period of flooding, rainfall or overwatering by other means, no additional fill should be placed until damage assessments have been made and remedial grading performed as described herein.

Rocks 12 inch in maximum dimension and smaller may be utilized in the compacted fill provided the fill is placed and thoroughly compacted over and around all rock. No oversize material should be used within 3 feet of finished pad grade and within 1 foot of other compacted fill areas. Rocks 12 inches up to four feet maximum dimension should be placed below the upper 10 feet of any fill and should not be closer than 15 feet to any slope face. These recommendations could vary as locations of improvements dictate. Where practical, oversized material should not be placed below areas where structures or deep utilities are proposed. Oversized material should be placed in windrows on a clean, overexcavated or unyielding compacted fill or firm natural ground surface. Select native or imported granular soil (S.E. 30 or higher) should be placed and thoroughly flooded over and around all windrowed rock, such that voids are filled. Windrows of oversized material should be staggered so those successive strata of oversized material are not in the same vertical plane.

It may be possible to dispose of individual larger rock as field conditions dictate and as recommended by the geotechnical consultant at the time of placement.

The contractor should assist the geotechnical consultant and/or his representative by digging test pits for removal determinations and/or for testing compacted fill. The contractor should provide this work at no additional cost to the owner or contractor's client.

Fill should be tested by the geotechnical consultant for compliance with the recommended relative compaction and moisture conditions. Field density testing should conform to ASTM Method of Test D 1556-00, D 2922-04. Tests should be conducted at a minimum of approximately two vertical feet or approximately 1,000 to 2,000 cubic yards of fill placed. Actual test intervals may vary as field conditions dictate. Fill found not to be in conformance with the grading recommendations should be removed or otherwise handled as recommended by the geotechnical consultant.

7.3 Fill Slopes

Unless otherwise recommended by the geotechnical consultant and approved by the regulating agencies, permanent fill slopes should not be steeper than 2:1 (horizontal: vertical).

Except as specifically recommended in these grading guidelines compacted fill slopes should be over-built two to five feet and cut back to grade, exposing the firm, compacted fill inner core. The actual amount of overbuilding may vary as field conditions dictate. If the desired results are not achieved, the existing slopes should be overexcavated and reconstructed under the guidelines of the geotechnical consultant. The degree of overbuilding shall be increased until the desired compacted slope surface condition is achieved. Care should be taken by the contractor to provide thorough mechanical compaction to the outer edge of the overbuilt slope surface.

At the discretion of the geotechnical consultant, slope face compaction may be attempted by conventional construction procedures including backrolling. The procedure must create a firmly compacted material throughout the entire depth of the slope face to the surface of the previously compacted firm fill intercore.

During grading operations, care should be taken to extend compactive effort to the outer edge of the slope. Each lift should extend horizontally to the desired finished slope surface or more as needed to ultimately established desired grades. Grade during construction should not be allowed to roll off at the edge of the slope. It may be helpful to elevate slightly the outer edge of the slope. Slough resulting from the placement of individual lifts should not be allowed to drift down over previous lifts. At intervals not

exceeding four feet in vertical slope height or the capability of available equipment, whichever is less, fill slopes should be thoroughly dozer trackrolled.

For pad areas above fill slopes, positive drainage should be established away from the top-of-slope. This may be accomplished using a berm and pad gradient of at least two percent.

Section 8 - Trench Backfill

Utility and/or other excavation of trench backfill should, unless otherwise recommended, be compacted by mechanical means. Unless otherwise recommended, the degree of compaction should be a minimum of 90 percent of the laboratory maximum density.

Within slab areas, but outside the influence of foundations, trenches up to one foot wide and two feet deep may be backfilled with sand and consolidated by jetting, flooding or by mechanical means. If on-site materials are utilized, they should be wheel-rolled, tamped or otherwise compacted to a firm condition. For minor interior trenches, density testing may be deleted or spot testing may be elected if deemed necessary, based on review of backfill operations during construction.

If utility contractors indicate that it is undesirable to use compaction equipment in close proximity to a buried conduit, the contractor may elect the utilization of light weight mechanical compaction equipment and/or shading of the conduit with clean, granular material, which should be thoroughly jetted in-place above the conduit, prior to initiating mechanical compaction procedures. Other methods of utility trench compaction may also be appropriate, upon review of the geotechnical consultant at the time of construction.

In cases where clean granular materials are proposed for use in lieu of native materials or where flooding or jetting is proposed, the procedures should be considered subject to review by the geotechnical consultant. Clean granular backfill and/or bedding are not recommended in slope areas.

Section 9 - Drainage

Where deemed appropriate by the geotechnical consultant, canyon subdrain systems should be installed in accordance with CTE's recommendations during grading.

Typical subdrains for compacted fill buttresses, slope stabilization or sidehill masses, should be installed in accordance with the specifications.

Roof, pad and slope drainage should be directed away from slopes and areas of structures to suitable disposal areas via non-erodible devices (i.e., gutters, downspouts, and concrete swales).

For drainage in extensively landscaped areas near structures, (i.e., within four feet) a minimum of 5 percent gradient away from the structure should be maintained. Pad drainage of at least 2 percent should be maintained over the remainder of the site.

Drainage patterns established at the time of fine grading should be maintained throughout the life of the project. Property owners should be made aware that altering drainage patterns could be detrimental to slope stability and foundation performance.

Section 10 - Slope Maintenance

10.1 - Landscape Plants

To enhance surficial slope stability, slope planting should be accomplished at the completion of grading. Slope planting should consist of deep-rooting vegetation requiring little watering. Plants native to the southern California area and plants relative to native plants are generally desirable. Plants native to other semi-arid and arid areas may also be appropriate. A Landscape Architect should be the best party to consult regarding actual types of plants and planting configuration.

10.2 - Irrigation

Irrigation pipes should be anchored to slope faces, not placed in trenches excavated into slope faces.

Slope irrigation should be minimized. If automatic timing devices are utilized on irrigation systems, provisions should be made for interrupting normal irrigation during periods of rainfall.

10.3 - Repair

As a precautionary measure, plastic sheeting should be readily available, or kept on hand, to protect all slope areas from saturation by periods of heavy or prolonged rainfall. This measure is strongly recommended, beginning with the period prior to landscape planting.

If slope failures occur, the geotechnical consultant should be contacted for a field review of site conditions and development of recommendations for evaluation and repair.

If slope failures occur as a result of exposure to period of heavy rainfall, the failure areas and currently unaffected areas should be covered with plastic sheeting to protect against additional saturation.

In the accompanying Standard Details, appropriate repair procedures are illustrated for superficial slope failures (i.e., occurring typically within the outer one foot to three feet of a slope face).

Site Class: D-default

Map data ©2022 Imagery ©2022 , CNES / Airbus, Maxar Technologies, U.S. Geological Survey, USDA/FPAC/GEO

Basic Parameters

Name	Value	Description
S_S	0.797	MCE_R ground motion (period=0.2s)
S_1	0.302	MCE_R ground motion (period=1.0s)
S_{MS}	0.957	Site-modified spectral acceleration value
S_{M1}	* null	Site-modified spectral acceleration value
S_{DS}	0.638	Numeric seismic design value at 0.2s SA
S_{D1}	* null	Numeric seismic design value at 1.0s SA

* See Section 11.4.8

Additional Information

Name	Value	Description
SDC	* null	Seismic design category
F_a	1.2	Site amplification factor at 0.2s
F_v	* null	Site amplification factor at 1.0s
CR_S	0.946	Coefficient of risk (0.2s)
CR_1	0.951	Coefficient of risk (1.0s)
PGA	0.332	MCE_G peak ground acceleration

F_{PGA}	1.268	Site amplification factor at PGA
PGA_M	0.421	Site modified peak ground acceleration
T_L	8	Long-period transition period (s)
SsRT	0.797	Probabilistic risk-targeted ground motion (0.2s)
SsUH	0.842	Factored uniform-hazard spectral acceleration (2% probability of exceedance in 50 years)
SsD	1.5	Factored deterministic acceleration value (0.2s)
S1RT	0.302	Probabilistic risk-targeted ground motion (1.0s)
S1UH	0.317	Factored uniform-hazard spectral acceleration (2% probability of exceedance in 50 years)
S1D	0.6	Factored deterministic acceleration value (1.0s)
PGAd	0.5	Factored deterministic acceleration value (PGA)

* See Section 11.4.8

Phase I Environmental Site Assessment
Singh Petroleum and Bacay Properties
11293 South Manthey Road and 169 Manila Road, Lathrop, California

EXECUTIVE SUMMARY

AdvancedGeo, Inc. (AGI) conducted this Phase I Environmental Site Assessment for the properties located at 11293 South Manthey Road and 169 Manila Road Drive, Lathrop, San Joaquin County, California (subject property or property) in conformance with the scope and limitations of ASTM Standard Practice E1527-21 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries 'AAI' (40 CFR Part 312).

PROPERTY USE

The subject property comprises two adjoining parcels, totaling 21.7 acres, situated along South Manthey Road, within an agricultural area of unincorporated San Joaquin County. The subject property is currently vacant, except for the remnants of a demolished single-family dwelling and an abandoned well. Additionally, several stockpiles of aggregate and road base are stored throughout the property.

Based on a review of historical documents, the subject property has been utilized agriculturally since the late 1930s. In the mid-1950s, a single-family residence was built on the southwest corner of the subject property. Between the mid-1960s to early-1970s, an additional residence was constructed on the eastern portion of the subject property. Manthey Road was developed through the eastern portion of the subject property in the early to mid-1970s. By the early-1980s, the residence located previously on the southwest corner of the subject property had been demolished. By the late-2010s, the remaining residence located on the eastern portion of the subject property had been demolished.

FINDINGS

Based on the standards set by ASTM Standard Practice E1527-21, a recognized environmental condition (REC) is defined as: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. Conditions that are determined to be *de minimis*, which generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies, are not recognized environmental conditions. Conditions that are considered Business Environmental Risk include the presence of asbestos-containing materials, lead-based paint, mold or moisture conditions, or non-hazardous regulated materials.

The standard further identifies historical RECs and controlled RECs. An historical REC (HREC) is a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (ie. activity and use limitations or other property use limitations). A controlled REC (CREC) is a REC that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (activity and use limitations or other property use limitations).

The following findings are differentiated below as Business Environmental Risks and *de minimis* conditions unlikely to be subject to government enforcement, HRECs, CRECs, RECs and potential non-ASTM environmental issues (issues that fall outside the definition of RECs).

BUSINESS ENVIRONMENTAL RISK

This assessment has revealed no evidence of potential Business Environmental Risks in connection with the subject property with the exception of the abandoned water well. If the well will not be rehabilitated for future use, the well should be destroyed under permit.

DE MINIMIS CONDITIONS

This assessment revealed no evidence of potential or *de minimis* conditions in connection with the subject property.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

This assessment has revealed no evidence of HRECs in connection with the subject property.

CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

This assessment has revealed no evidence of CRECs in connection with the subject property.

RECOGNIZED ENVIRONMENTAL CONDITIONS

This assessment has revealed no evidence of RECs in connection with the subject property.

OTHER POTENTIAL ENVIRONMENTAL ISSUES

This assessment has revealed no evidence of other non-ASTM-defined environmental issues in connection with the subject property except for the petroleum-containing waste observed on the eastern portion of the subject property during the initial property inspection on 15 March 2023. Several drums and other containers containing waste oil, oil, used oil filters, paint and other wastes were illegally dumped near the former driveway entrance onto the eastern subject parcel. Several of the drums and containers were open and spilling petroleum contents onto bare soil.

In March 2023, the property owner contracted with Clean Harbors to remove the waste materials and cleanup the petroleum-impacted soils. Response activities began on 18 March 2023. Clean-up activities included the removal of all waste materials and contaminated construction waste. Additionally, approximately 5.1 cubic yards of impacted soil were excavated and placed in covered bins for disposal. Representatives for Clean Harbors reportedly utilized visual observations to determine that all impacted soils were removed.

On 05 April 2023, AGI conducted a follow-up inspection of the subject property. No obvious petroleum staining or odors were observed in soils remaining within the excavation area. Any residual petroleum contamination (if any) will likely be minimal and not of significant concern to the subject property. Confirmation soil-sampling was not conducted by Clean Harbors during the March 2023 clean-up; however, confirmation soil samples should be considered to validate that the impacted soil has been successfully removed.

CONCLUSIONS AND OPINION

AdvancedGeo, Inc. (AGI) has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 and the US-EPA AAI for the property located at 11293 South Manthey Road and 169 Manila Road Drive, Lathrop, San Joaquin County, California.

It is the opinion of the environmental professionals that the findings and conclusions presented in this report are reasonable and prudent, given the evidence as presented. AGI did not identify any RECs on the subject property during the course of the Phase I.

However, several drums of waste oil, oil, oil filters and paint were dumped and impacted the soil on the eastern portion of the property in early March 2023. In mid-March 2023, 5.1 cubic yards of soil were excavated for disposal. Only visual observations were utilized to determine the extent of the excavation. While the soil visually appears clean, confirmation soil samples should be considered to validate the successful removal of the impacted soil.

CRITICAL DATES

Report Issuance Date	11 April 2023
Date of Interview of Past and Present Owners and Occupants Identified in Section 10 of ASTM 1527-21	15 March 2023
Date of Recorded Environmental Cleanup Lien Search	N/A
Date of Visual Inspection of Subject and Adjoining Properties	15 March 2023 05 April 2023
Earliest Date of Interviews, Lien Search, Record Reviews, and Inspections	08 March 2023
Report Viability Date	08 October 2023
Report Shelf Life (Requires update after 180 days)	11 April 2024

The Phase I Environmental Site Assessment report cannot be older than 180 days prior to closing to be valid for a property transfer. In accordance with 40 CFR 312.20 for All Appropriate Inquiries, the following components of the Phase I report must be updated, if more than 180 days has lapsed from the issuance date:

- Interviews with past and present owners, operators, and occupants (40 CFR 312.23)
- Searches for recorded environmental cleanup liens (40 CFR 312.25)
- Reviews of federal, tribal, state, and local government records (40 CFR 312.26)
- Visual inspections of the facility and adjoining properties (40 CFR 312.27)
- The declaration by the Environmental Professional (40 CFR 312.21)

The shelf life of the Phase I Environmental Assessment report, and corresponding update, is one year, or 360 days from the original report issuance date. If more than one year has lapsed from the report date prior to closing, a new Phase I report must be obtained to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on CERCLA liability.

Phase I Environmental Site Assessment
Singh Petroleum and Bacay Properties
11293 South Manthey Road and 169 Manila Road, Lathrop, California

1.0. INTRODUCTION

AdvancedGeo, Inc. (AGI) has been retained by Valley Real Estate Center to perform a Phase I Environmental Site Assessment (Phase I) of the properties located at 11293 South Manthey Road and 169 Manila Road Drive, Lathrop, San Joaquin County, California (hereafter referred to as subject property or property). The Phase I was performed in conformance with the scope and limitations of ASTM Standard Practice E1527-21 and the United States Environmental Protection Agency (USEPA) Standards and Practices for 'All Appropriate Inquiries (AAI)' (40 CFR Part 312). The Phase I is designed to provide the Client (user) with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

1.1. PURPOSE

The purpose of the Phase I is to identify and assess environmental characteristics of the subject property that could lead to liability in the event of ownership, that could have a potential impact on property value or that could impact the present or future use of the subject property.

The purpose of ASTM Standard Practice E1527-21 and USEPA AAI is to define good commercial and customary practice for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the *Comprehensive Environmental Response Compensation and Liability Act* (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses of the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35)(B). An evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that identified in this practice (based on ASTM Practice E1527-21).

The goal of ASTM Standard Practice E1527-21 is to identify *recognized environmental conditions* (RECs) in connection with the subject property. A REC is defined as: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. Conditions that are determined to be de minimis, which generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate

governmental agencies, are not recognized environmental conditions. Conditions that are considered Business Environmental Risk include the presence of asbestos-containing materials, lead-based paint, mold or moisture conditions, or non-hazardous regulated materials.

The standard further identifies historical RECs and controlled RECs. An historical REC (HREC) is a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (ie. activity and use limitations or other property use limitations). A controlled REC (CREC) is a REC that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (activity and use limitations or other property use limitations).

1.2. SITE DESCRIPTION

The subject property comprises two adjoining parcels, totaling 21.7 acres, situated along South Manthey Road, within an agricultural area of unincorporated San Joaquin County. The subject property is currently vacant, except for the remnants of a demolished single-family dwelling and an abandoned well. Additionally, several stockpiles of aggregate and road base are stored throughout the property. Further property location descriptions, characteristics, improvements, and site vicinity characteristics are discussed below.

1.2.1. Location and Legal Description

The subject property location can be identified as the following:

Site Addresses	1) 11293 South Manthey Road, Lathrop, California 95330-9728 2) 169 Manila Road, Lathrop, California 95330-8709
Assessor's Parcel Numbers (APNs)	1) 191-250-140-000 2) 191-250-060-000
Legal Description	None listed
Property Owner	1) SINGH PETROLEUM INVESTMENTS INC 2) BACAY ANTONIO A TR ETAL
Land Use Type	1) Vacant 2) Agriculture
Size of Property	1) 11.400 Acre 2) 10.300 Acres TOTAL: 21.700 Acres

The parcel map and owner information were obtained from the County Assessor's Office or independent parcel search company. Copies of the parcel map and the owner information are provided in Appendix B.

1.2.2. Site and Vicinity General Characteristics

The subject property is located within an agricultural area of unincorporated San Joaquin County, north of the City of Lathrop, California. Figure 1 shows the setting of the subject property (7.5 Minute United States Geological Survey [USGS] Topographic Series, Lathrop, CA Quadrangle, Colorado). Figure 2 shows the vicinity surrounding the subject property. Figure 3 shows the site and immediate surrounding area. Photographs of the subject property are provided in Appendix A.

1.2.3. Current Use of Property

The property is currently vacant rural grassland with no buildings or structures on the property except for remnants of a former residence and an abandoned water well.

1.2.4. Proposed Use of Property

AGI has been informed that the subject property is intended to be developed as a truck stop and restaurant.

1.2.5. Property Utilities

Potable Water Source	None
Sanitary Sewer Utility	None; decommissioned septic system
Storm Drain Utility	None
Electric Utility	None
Natural Gas Utility	None

1.3. DETAILED SCOPE-OF-SERVICES

Except where identified in Section 8.1., the scope of work for this Phase I conforms to ASTM Standard Practice E1527-21 and the USEPA AAI (40 CFR Part 312). Any additional User requested scope of services are discussed in Section 7.0.

1.4. SIGNIFICANT ASSUMPTIONS

Our professional services were performed using that degree of care and skill ordinarily exercised by environmental consultants practicing in this or similar fields. Findings were based mainly upon examination of historical records, maps, aerial photographs and government agency lists, on a site reconnaissance visit, and on information obtained during personal interviews with persons of long-term familiarity with the subject property

as specified in ASTM E1527-21 and the USEPA AAI. Hazardous waste site lists presented in this report represents only a search of specific government records as listed below. AGI is aware additional government records may exist. It should be noted that government agencies often do not list all sites with environmental contamination or that the list could be inaccurate and/or incomplete.

Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites, are assumed based on geologic interpretations from available sources. AGI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.5. LIMITATIONS AND EXCEPTIONS

Property conditions, as well as local, state, tribal and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AGI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

Considerations identified as beyond the scope of an ASTM Phase I that may affect business environmental risks at a property include the following: asbestos-containing materials (ACMs); biological agents; cultural and historic resources; ecological resources; endangered species; health and safety; indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment; industrial hygiene; lead-based paint (LBP); lead in drinking water; mold; radon; regulatory compliance; and wetlands. These environmental issues may warrant assessment based on the type of property or transaction; however, they are considered non-scope issues under ASTM Practice E1527-21. Many of these considerations are required as part of the Fannie Mae Environmental Due Diligence Requirements, Form 4251. Any addition of non-scope items must be agreed upon between the user and AGI prior to initiation of the Phase I.

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of investigation into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and

information provided, and observations and conditions that existed on the date and time of the property visit.

1.6. SPECIAL TERMS AND CONDITIONS

There were no special terms or conditions agreed upon by the environmental professional, beyond the initial agreed upon scope of work, used in preparation of this report.

1.7. USER RELIANCE

Conclusions and recommendations in this report are based on findings regarding historical use of the site, and on features noted during the site reconnaissance. The absence of any potential gross contamination sources, historic or present, does not necessarily imply that the site is free of any contamination. This report only represents a 'due diligence' effort as to the current environmental status of the site. No other warranty, expressed or implied, is made as to the professional recommendations contained in this report.

2.0. USER PROVIDED INFORMATION

According to the ASTM Standard E1527-21 and the USEPA AAI, in order to qualify for one of the Landowner Liability Protections (LLPs) to CERCLA liability offered by the *Small Business Liability Relief and Brownfields Revitalization Act of 2001*, the client (user) must provide to the environmental professional the following information (if available) in relation to the subject property:

Title Records	A review of Title Records was not requested by the user.
Environmental Liens or Activity and Use Limitations	An environmental lien or AUL's (activity and usage limitations) search was not requested by the user.
Specialized Knowledge	AGI was not provided any specialized knowledge by the user and does have not any specialized knowledge of this property outside of what is contained in this report. The property ownership and tenants as well as all individuals who were interviewed as part of this investigation, have not reported any specialized knowledge of this property outside of what is contained in this report.
Commonly Known or Reasonably Ascertainable Information	The user provided no commonly known or reasonably ascertainable information available within the local community about the subject property that is material to recognized environmental conditions in connection with the property.
Valuation Reduction for Environmental Issues	No property valuation reduction related to environmental issues or concerns was reported by the user.

Owner, Property Manager, and Occupant Information	No written or verbal communication with the property owner, manager and/or occupant revealed any information which suggested that there are currently or historically any recognized environmental conditions associated with the subject property not noted in this assessment.
Reason for Performing Phase I	Potential property transaction
Other	No modifications to the ASTM E1527-21 standard scope-of-services were requested by the user for special circumstances that might be encountered at the subject property. Any additional user requested scope of services are discussed in Section 7.0.

Failure to provide the above information could result in a determination that 'all appropriate inquiries' are not complete. Additional items should be collected, if available, and provided to AGI.

3.0. RECORDS REVIEW

The purpose of obtaining and reviewing subject property and site vicinity historical, physical setting, and regulatory records is to help identify *recognized environmental conditions* in connection with the subject property.

3.1. HISTORICAL USE INFORMATION

The objective of consulting historical sources for a Phase I is to develop a history of previous uses of the property and surrounding area to help identify the likelihood of past uses having led to recognized environmental conditions with respect to the property. All obvious uses shall be identified from the present to the property's first obvious developed use, or back to 1940, whichever is earlier. Review of standard sources at less than five-year intervals is not required.

3.1.1. Historical Use Information on Subject Property

Subject property history was researched by reviewing historical Sanborn Fire Insurance aps (no coverage), aerial photographs, topographic maps, telephone directory formation, the San Joaquin Community Development Building Department records, and the San Joaquin County Assessor's Office records.

Representative historical records are provided within Appendix B.

3.1.1.1. Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas but are now utilized as a valuable source of historical and environmental risk information. EDR owns the largest collection of Sanborn Fire Insurance Maps. AGI requested EDR to provide any Sanborn Fire Insurance Maps that might cover the subject property. Sanborn Fire Insurance Map coverage is not available for the subject property.

3.1.1.2. Aerial Photographs

AGI reviewed aerial photographs of the subject property and surrounding area that were provided by EDR as well reviewed online (Google Earth) for the years 1937, 1940, 1957, 1963, 1968, 1975, 1982, 1993, 2006, 2009, 2012, 2016 and 2022. The following is a summary of our review of the aerial photographs:

Year(s)	Subject Property	Surrounding Area
1937, 1940	The subject property is an agricultural field.	The adjacent properties to the north, south, east, and west are utilized for agriculture. Rural residences are visible to the adjacent northeast and east. California Interstate 5 is visible to the east as a one-lane highway. Residential development is visible along Interstate 5 to the east and southeast. Manila Road is visible to the south.
1957, 1963	A single residence is visible on the southwestern corner of the subject property while the remainder of the property is an agricultural field.	Unchanged except for a large residence located adjacent to the east of the subject property along Interstate 5.
1968	A residence is located in the center portion of the subject property consistent with the current building footprint. The remainder of the property is an agricultural field.	Unchanged with the exception of residential development present immediately south of the subject property.
1975	Unchanged from previous images.	The current extent and layout of Interstate 5 is visible with on-off ramps to the east of the subject property Manthey Road is visible bisecting the subject property from north to south.
1982, 1993, 2006, 2009, 2012, 2016	The residence previously located in the southwestern corner of the subject property has been removed. By 2006, the agricultural field appears to be fallow.	Commercial and residential development is visible to the east following California Interstate 5. By 2006, a large warehouse is visible to the southeast along South Harlan Road.
2022	The residence located on the center portion of the subject property along Manthey Road has been removed. The	Unchanged from previous images.

Year(s)	Subject Property	Surrounding Area
	foundations of the structure and driveway are visible. Numerous piles of soil can be observed on the central portion of the subject property near the former residence.	

A review of historical aerial photographs did not reveal any items of environmental concern in connection with the subject property.

3.1.1.3. Historical Topographic Maps

AGI reviewed historical topographic maps of the subject property and surrounding area that were supplied by EDR for the years 1915, 1952, 1968, 1976, 1987, 1994, 1996 and 2012.The following is a summary of our review of the topographic maps:

Year(s)	Subject Property	Surrounding Area
1915	The subject property is vacant land with no buildings or structures on the property.	The surrounding adjacent properties are also vacant undeveloped land. Manila Road is mapped as a dirt road to the south.
1952	A residence is mapped in the southwestern corner of the subject property. A water well is located centrally on the west boundary of the property.	The surrounding area remains vacant land. To the south and east of the subject property, multiple residences have been constructed. The Sharpe General Depot is mapped to the distant southeast.
1968	An additional residence is mapped on the central portion of the subject property.	Unchanged with the exception of commercial and residential development to the east and northeast along California Interstate 5. An unnamed reservoir is mapped to the distant southwest.
1976, 1987, 1994, 1996	Unchanged from previous maps.	Manthey Road is mapped bisecting the eastern portion of the subject property. California Interstate 5 has been expanded to its current extent with the addition of on-off ramps.
2012	These topographic series only show elevation contours, roadways and waterways. The subject property is mapped in a rural agricultural area.	These topographic series only show elevation contours, roadways and waterways.

A review of historical topographic maps did not reveal any items of environmental concern in connection with the subject property.

3.1.1.4. Street Directories

AGI requested that EDR provide a review of city and street directories to determine the occupancy history of the subject property and adjacent properties. EDR provided a review that ranged from 1974 to 2020 at 5-year or less intervals. The following is a summary of the city directory search:

Address	Location	Occupant Summary
11293 South Manthey	Subject property	2000: Chastian, Gina M. 2005: Kelley, Kanwarjit S 2010: Kelley, Kanwar S. 2014 - 2017: Kelley, Gurdip
169 Manila Road	Subject property	1974: Caridad, Aquino
11199 South Manthey Road	Adjacent North	1974 - 2017: Residential occupancy
11401 South Manthey Road	Adjacent South	1974 - 1920: Residential occupancy
11591 South Manthey Road	Adjacent South	1974 - 2014: Residential occupancy
175 Manila Road	Adjacent West	1974: Residential occupancy

A review of historical telephone directory listings of the subject property address did not reveal any items of environmental concern.

3.1.1.5. Building Department Records

The San Joaquin County Community Development Department maintains records pertaining to the construction and demolition of structures within unincorporated San Joaquin County. A review of Community Development Department records is summarized in the following table:

Year(s)	Summary
1995	Permit to tear off, re-sheath, and re-roof with composite roofing.
2006	Merger Application for APN:191-250-08 and 191-50-11 into one parcel. Location: On the west side of Manthey Road, approximately 740-feet north of Manila Road (Lathrop).
2009	Use Permit Application and associated documents to establish a truck stop, hotel, convenience store with automobile fuel island and full-service restaurant to be built in three phases.
2016	Withdrawn Permit to repair fire damaged single-family residence. Rebuild roof with new trusses, rebuild den and attached garage.

3.1.1.6. Assessor's Records

Records available at the San Joaquin County Assessor's office included a single *Residential Building Record* for subject parcel 191-250-140-000, formerly identified as

APN 191-250-080. In 1968, a single permit (BP 60785) was issued to the property located at 11293 South Highway 50 (present day 11293 South Manthey Road) for construction of a 1,337-square foot single-story, two-bedroom dwelling, with a 440-square foot attached garage and a 600-sqaure foot equipment shed.

A review of the historical Assessor's records for the subject property did not reveal any items of environmental concern.

3.1.1.7. Previous Phase I and II Environmental Site Assessments

AGI reviewed the following previous environmental site assessments:

- Advanced GeoEnvironmental, Inc (AGE)-prepared *Phase I Environmental Site Assessment,* 26 March 2019: In March 2019, AGE (predecessor to AGI) completed a Phase I for the property identified by address 11293 South Manthey Road (APN 191-250-140-000). The subject property comprised a single 11.4-acre parcel, located south of Roth Road. Manthey Road crossed through the eastern portion of the property parcel. At the time of the 2019 Phase I, the property was largely undeveloped land, with several remnants of a former residence remaining, including a well pump and electric meter. AGE did not identify any HRECs, CRECs or RECs in regard to the subject property.
- AGI-prepared *Phase I Environmental Site Assessment,* 26 April 2021: In April 2021, AGI completed a Phase I for the property identified by address 169 Manilla Road (APN 191-250-060-000). The subject property comprised a single 10.3-acre parcel, located to the north of Manila Road. At the time of the 2021 Phase I, the property was undeveloped, vacant rural grassland with no improvements or structures, except for an abandoned water well. AGE did not identify any HRECs, CRECs or RECs in regard to the subject property.

Copies of the previous environmental site assessments are included in Appendix B.

3.1.2. Historical Use Information on Adjoining Properties

Historical use of immediately adjoining properties has been agricultural land and homesteads since the late-1930s. California Interstate 5 was developed to the west in the early-1970s. Between the late 1960s to mid-1970s, Manthey Road was developed. through the eastern portion of the subject property.

Historical uses of adjoining properties do not appear to be of environmental concern to the subject property.

3.2. PHYSICAL SETTING

Geology	The subject property is situated within the Great Valley Geomorphic Province of California, an elongate, northwest trending structural trough running 400 miles through Central California. The Great Valley is bound to the north by the Klamath Mountains, the south by the Tehachapi Mountains, the east by the Sierra Nevada Mountains, and the west by the Coast Ranges. Approximately 32,000 feet of marine and continental sediment have been deposited almost continuously since the Jurassic. The northern and southern regions of the Great Valley are designated the Sacramento and San Joaquin Valleys, respectively. The subject property is located within the San Joaquin Valley.
Hydrology	The subject property and surrounding area lie within the San Joaquin Valley Groundwater Basin, Eastern San Joaquin Subbasin (5-22.01). The subbasin is bound on the south, southwest and west by the Modesto, Delta-Mendota, and Tracy Subbasins, respectively, and on the northwest and north by the Solano, South American, and Cosumnes Subbasins. The Solano and South American are subbasins of the Sacramento Valley Groundwater Basin. The Eastern San Joaquin Subbasin is drained by the San Joaquin River and several of its major tributaries namely, the Stanislaus, and Calaveras, and Mokelumne Rivers. The San Joaquin River flows northward into the Sacramento and San Joaquin Delta and discharged into the San Francisco Bay. Annual precipitation within the subbasin ranges from about 11 inches in the southwest to about 25 inches in the northeast. Groundwater information collected from the State of California Geotracker database at a site located approximately 0.3-mile northeast of the property indicates that groundwater is found at an approximate depth between 3 and 12 feet below surface grade and flows to the northwest.
Topography	The property is located at an elevation of approximately 16 feet above mean sea level (MSL), in an area of low topographic relief. Regional slope of the area is toward the general east northeast.
Surface Soils	EDR provides a report listing dominant soil composition in the general area of the subject property based on information from the United States Department of Agriculture's Soil Conservation Service STATSGO (State Soil Geographic Database) soil maps. Soil surface texture at the subject property consists of soil identified as Veritas, a fine sandy loam in the Class B Hydrogeologic Group which includes moderate infiltration rates. Corrosion potential of this soil for uncoated steel is high.
Surface Water Features	There are no surface water features on the subject property. The nearest surface water feature in the vicinity of the subject property is the San Joaquin River, located approximately 1-mile west of the subject property.
Flood Zone	The EDR database report shows that the subject property is not located within either a Special Flood Zone Hazard Area (1%) or a 0.2% Annual Chance Flood Zone. This data, available in select counties across the country, was obtained by EDR from the Federal Emergency Management Agency (FEMA) which has maps depicting FEMA-defined flood zones.
Wetlands	The EDR database report shows that the subject property is not located within the National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR from the U.S. Fish and Wildlife Service.

3.3. STANDARD ENVIRONMENTAL RECORD SOURCES

A computer search of federal, state and regional regulatory agency databases was performed by Environmental Data Resources Inc. (EDR), a data retrieval company, to provide current regulatory database information compiled by a variety of federal and state regulatory agencies. A complete list and description of databases investigated, in compliance with ASTM E1527-21 and USEPA AAI, is included in EDR Report provided in Appendix C.

3.3.1. Subject Property Database Search

The property address 11293 South Manthey Road, Lathrop, California is listed on the following governmental databases in the EDR Report under the name GURDIP KELLY

Database	Summary
HAZNET	A single hazardous waste manifest on file from 2015. The waste manifest depicts approximately 0.46-tons of asbestos containing waste removed from the subject property.
HWTS	Listed with an EPA ID of CAC002806664 with a creation date of 03/10/2015 and an inactive date of 06/09/2015. The facility is depicted as an inactive and temporary state facility with no other information on file.

3.3.2. Site Vicinity Database Search

Sites with recognized environmental conditions surrounding the subject property are typically of concern to the subject property when they are located in an up-gradient direction from the property with respect to the ground water flow direction. Typically, groundwater would represent the migration medium for contaminants over significant distances. Sites located in equi-gradient or down-gradient directions from the subject property are less likely to impact the subject property.

AGI retained EDR to provide current regulatory database information compiled by a variety of federal and state regulatory agencies. A copy of the complete database is included in Appendix C. The following information was obtained:

Type	Regulatory Agency Database	AMSD	Number of Sites within the AMSD
Federal	National Priority List Sites: **NPL, Proposed NPL, NPL LIENS**	1mile	1
Federal	Delisted National Priority List Sites: **Delisted NPL**	½-mile	0
Federal	Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Sites: **FEDERAL FACILITY, SEMS**	½-mile	1

Type	Regulatory Agency Database	AMSD	Number of Sites within the AMSD
Federal	CERCLIS No Further Remediation Action Planned (NFRAP) Sites: **SEMS-ARCHIVE**	½-mile	0
Federal	Resource Conservation and Recovery Act (RCRA) Corrective Action Report Sites: **CORRACTS**	1 mile	**1**
Federal	RCRA Non-CORRACTS Treatment, Storage, or Disposal (TSD) Sites: **RCRA-TSDF**	½- mile	1
Federal	RCRA Generator Sites: **RCRA-LQG, RCRA-SQG, RCRA – CESQG, RCRA NonGen/NLR**	¼-mile	2
Federal	Institutional Control/Engineering Control Registry Sites: **LUCIS, US ENG CONTROLS, US INST CONTROL**	½-mile	0
Federal	Environmental Response and Notification System Sites: **ERNS**	<1/8-mile	0
State & Tribal	Solid Waste Disposal Facilities and/or Landfill Sites: **SHWF**	½-mile	0
State & Tribal	Leaking Storage Tank Sites: **LTANKS, LUST, LUST TRUST**	½-mile	**2**
State & Tribal	Registered Storage Tank Sites: **UST, AST**	¼-mile	**13**
State & Tribal	Voluntary Cleanup Sites: **INDIAN VCP, VCP**	½-mile	0
State, Tribal and Local	Brownfield Sites: **BROWNFIELDS, US BROWNFIELDS**	½-mile	0
Local	Dry Cleaning Facility Sites: **DRYCLEANERS**	¼-mile	0
Either	Unmappable Database Listings: **orphan sites**	Database dependent	**6**

AMSD: Appropriate Minimum Search Distance

AGI's review of the referenced databases also considered the potential or likelihood of contamination from adjoining and nearby sites. To evaluate which of the adjoining and nearby sites identified in the regulatory database report present an environmental risk to the subject property, AGI considered the following:

- The type of database on which the site is identified;
- The topographic position of the identified site relative to the subject property;
- The direction and distance of the identified site from the subject property;
- Local soil conditions in the subject property area;

- The known or inferred groundwater flow direction in the subject property area;
- The status of the respective regulatory agency-required investigation(s) of the identified site (if any); and
- Surface and subsurface obstructions and diversions (e.g., buildings, roads, sewer systems, utility service lines, rivers, lakes and ditches located between the identified site and the subject property.

Only those sites that are judged to present a potential environmental risk to the subject property and/or warrant additional clarification are further evaluated. Using the referenced criteria and based on a review of readily available information contained within the regulatory database report, AGI did not identify adjacent or nearby sites (e.g. within ¼-mile radius) listed on the regulatory database report that were judged to present a potential environmental risk to the subject property with the exception of the following:

Site	Distance & Direction[1]	Database(s) & Summary	Environmental Concern[2]
MOORMAN MFG 250 E Roth Dr	830 feet E Equi-gradient	RCRA NON-GEN, SWEEPS UST, HIST UST, CERS HAZ WASTE, CERS, UST, EMI: Verified as a current non-generator and chemical storage facility with handler activities. No violations or evaluations on file. A total of two underground storage tanks on file containing 10,000-gallons each of gasoline and diesel fuel.	No indication - based on the non-generator status and distance to the SP.
BENETO TANK LINE 10998 S Harlan Rd	872 feet ENE Equi-gradient	LUST, CORTESE, CERS: Leaking underground storage tank with diesel. Case closed in 2007 and issued a closure no further action letter.	No indication - based on the regulatory status and distance to the SP.
SHARPE ARMY DEPOT 700 E Roth Rd	1,916 feet E Equi-gradient	NPL, SEMS, CORRACTS, RCRA, US ENG CONTROLS, US INST CONTOLS, HIST UST, RCRA NON-GEN, ROD: The site operated as an Army Depot in the 1980's. US Army maintenance facility produced waste products that affected groundwater conditions.	No indication - based on the regulatory status and distance to the SP.
Notes: 1: distance and direction from subject property 2: environmental concern based on the EDR report SP: subject property		N: north S: south E: east W: west	NE: northeast SE: southeast NW: northwest SW: southwest

3.4. ADDITIONAL ENVIRONMENTAL AGENCY RECORD SOURCES

In addition to the EDR computer search of federal, state and regional regulatory agency databases, AGI contacted appropriate regulatory agencies to review records regarding the property and surrounding sites identified as having recognized environmental conditions that have the potential to impact the subject property based on groundwater

flow direction, distance from the subject property and nature of the releases causing the environmental condition.

Additional agency searches include the following:

- San Joaquin County Environmental Health Department (SJCEHD) and the Central Valley Regional Water Quality Control Board (Regional Board) maintain records of industrial violations for this area and are the lead agencies for the enforcement of the State Underground Storage Tank and Hazardous Waste Laws for San Joaquin County. AGI requested to review any files that were available.
- The Regional Board also maintains an online computer database, GeoTracker, that provides listings of closed and active sites related to unauthorized releases of hydrocarbons as well as solvents, metals, and other materials. For listed sites, online reports are commonly available. AGI reviewed the GeoTracker database for information that may be available for the subject property or surrounding sites.
- The California Department of Toxic Substances Control (DTSC) is the State of California agency responsible for oversight of hazardous waste regulations, cleanup of existing contamination, pollution prevention and reduction in hazardous waste and toxic materials and identification of potential new pollutants. The DTSC maintains the EnviroStor Data Management System (ENVIROSTOR) which allows for the search for information on investigation, cleanup, permitting and/or corrective actions that are planned, being conducted or have been completed under DTSC oversight. AGI reviewed the ENVIROSTOR database for any information that may be available.
- The United States Environmental Protection Agency (USEPA) provides an online computer database, ENVIROFACTS, providing lists of sites listed on multiple USEPA databases. AGI reviewed the ENVIROFACTS database for any information that may be available.
- The San Joaquin Valley Air Pollution Control District (SJVAPCD) is the air district for the counties of San Joaquin, Stanislaus, Merced, Fresno, Kings, Tulare and Lathrop. AGI contacted the SJVAPCD for any information available.
- The California Geologic Energy Management Division's (CalGEM) online Well Finder application presents California's oil and gas industry information from the geographic perspective. AGI reviewed the CalGEM Well Finder database for information that may be available for the subject property or surrounding sites.

3.4.1. Additional Subject Property Record Sources

The subject property address was searched on the following record sources:

SOURCE	SUMMARY
Regional Board & GeoTracker database	The subject property is not listed on the GeoTracker database, and the Regional Board does not have any records on-file.

SOURCE	SUMMARY
DTSC & ENVIROSTOR database	The subject property is not listed on the ENVIROSTOR database and the DTSC does not have any records on-file.
USEPA ENVIROFACTS	The subject property is not listed on the ENVIROFACTS database.
SJVAPCD	The SJVAPCD does not have records on-file for the subject property.
SJCEHD	SCCEHD records for the subject property pertain to the construction of a 150-foot-deep irrigation well and installation of a 10hp well pump.
CalGEM	According to the CalGEM Well Finder, no oil and/or gas wells are located in the vicinity of the subject property.

3.4.2. Additional Site Vicinity Record Sources

The SJCEHD and Regional Board maintain records for, and are responsible for, enforcement of state UST and hazardous waste laws. AGI commonly reviews files for up-gradient sites under active environmental regulation to ascertain the current site status and its potential to impact the subject property. No sites, under active or past environmental regulation, were identified by the database search within the required search radius of potential concern to the property.

3.5. PROVIDED SUBJECT PROPERTY RECORDS

No records were provided to AGI by the user and/or property owner during the course of this Phase I.

3.6. VAPOR ENCROACHMENT CONDITION

The encroachment of hydrocarbon and volatile organic compound (VOC) vapors into soil pore space occurs when organic chemicals migrate from contaminated groundwater or soil into the airspace between soil particles. Some typical organics involved are petroleum based or chlorinated solvents (e.g, BTEX and dry-cleaning chemicals). They may have leaked into the groundwater and/or soil from underground storage tanks, or buried waste, or from disposal in septic systems.

In compliance with ASTM Standard E2600-15 (Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions), AGI evaluated the potential for a Vapor Encroachment Condition (VEC) at the subject property. Based on a VEC screening, it was determined that ‘a VEC does not exist’ at the property. A copy of the AGI-generated Tier 1 VEC screening form is provided within Appendix E.

4.0. SITE RECONNAISSANCE

Subject property site reconnaissance was conducted by AGI representatives on 15 March

2023 and 05 April 2023. At the time of the site visits the weather was clear and cold. Primary features of the property are shown in a site plan provided. Photographs of selected features of the subject site are included in Appendix A.

4.1. METHODOLOGY AND LIMITING CONDITIONS

The property was fully accessible during the site reconnaissance. No limiting conditions were noted.

4.2. GENERAL SITE SETTING

The subject property comprises two adjoining parcels, totaling 21.7 acres, situated along South Manthey Road, within an agricultural area of unincorporated San Joaquin County. At the time of the site reconnaissance, the property was vacant, except for the remnants of a demolished single-family dwelling and an abandoned well. Additionally, several stockpiles of aggregate and road base were stored throughout the property.

During the initial inspection on 15 March 2023, AGI noted an apparent illegal dump site with petroleum containing waste, in the driveway entrance for the former residence on the eastern portion of the property. The dump site encompassed an area of approximately 25-square feet, with numerous 55-gallon drums and several smaller containers filled petroleum products, paints, and coolants. Several of the containers were open, and leaking contents onto bare soil. Oil-stained soil, concrete and waste construction materials were also noted near the apparent dump site.

It is AGI's understanding that the property owner contracted with Clean Harbors to remove the waste materials and cleanup the petroleum impacted soil. Clean-up activities included the removal of all waste materials and contaminated construction waste. Additionally, approximately 5.1 cubic yards of impacted soil were excavated and placed in covered bins for disposal. Representatives for Clean Harbors reportedly utilized visual observations to determine that all impacted soil was removed.

On 05 April 2023, AGI conducted a follow-up inspection of the subject property. No obvious petroleum staining or odors were observed in soils remaining within the excavation area (former apparent dump area).

The following is a description of the property improvements:

Structures	Building footprint and subfloor of a single-family residence was observed on the eastern subject parcel (191-250-140-000).
Adjoining / Access / Egress Roads	The property is accessible via Manthey Road. A portion of an asphalt driveway is located west of Manthey Road.
Surface Types	The property is covered with grass and bare soil. A portion of an asphalt driveway is located west of Manthey Road.

Additional Features	Large amounts of road base aggregate were stockpiled for planned development of the property. An abandoned irrigation well was observed northwest of the former residence.
Surface Water	None.

At the time of the site reconnaissance, current uses of adjacent properties included the following:

North	Agricultural land and residence (11199 South Manthey Road)
South	Agricultural land and residence (11401 South Manthey Road)
East	South Manthey Road followed by California Interstate 5
West	Agricultural land

Current uses of the adjoining properties do not appear to be of potential environmental concern to the subject property.

4.3. EXTERIOR AND INTERIOR OBSERVATIONS

The following was observed at the time of the property reconnaissance:

YES	NO	CONDITION OBSERVED ON/AT SUBJECT PROPERTY
	X	**Pits, ponds or lagoons with respect to waste treatment or disposal**
X		**Stained soil or pavement, patched pavement** *Approximately 30 square feet of petroleum-stained soil and concrete was observed at an apparent illegal dump site on the eastern portion of the subject property.* *Subsequent clean-up activities performed after initial AGI's inspection included excavation and removal of approximately 5.1 cubic yards of petroleum impacted soil and concrete. During a follow-up inspection conducted in April 2023, AGI did not observe any obvious petroleum staining or odors in the soils remaining within the excavation area.*
	X	**Stressed vegetation (from causes other than insufficient water)**
	X	**Fill dirt from unknown source, or contaminated source**
	X	**Solid waste (mounds or depressions suggesting waste disposal)**
	X	**Wastewater / storm water discharged into a drain, ditch or stream**
X		**Wells (abandoned, irrigation, domestic, monitoring or oil and gas)** *An abandoned irrigation well was observed on the central portion of the subject property, northeast of the former dwelling.*
	X	**Dry wells**

YES	NO	CONDITION OBSERVED ON/AT SUBJECT PROPERTY
	X	**Septic systems or cesspools**
	X	**Movement of hazardous materials to adjacent properties**
X		**Hazardous substances and/or petroleum products** *Numerous petroleum containing products were observed on the subject property at an apparent illegal dump site on the eastern portion of the subject property. Substances include discarded used oil filters and other small containers of used motor oil.* *Subsequent clean-up activities performed after AGI's initial inspection have since removed and disposed of the waste petroleum products.*
	X	**Above-ground storage tanks (ASTs) for storage of petroleum products and/or hazardous substances**
	X	**Underground storage tanks (USTs) for storage of petroleum products and/or hazardous substances**
	X	**Strong, pungent or noxious odors**
X		**Pools of liquid (other than water)** *An apparent illegal dump site with several open containers of various waste automotive fluids and petroleum products was noted in the driveway area for the former dwelling on the eastern portion of the property. Pooled oil and coolant was observed on the bare soil in the immediate vicinity of the apparent dump site.* *Subsequent clean-up activities performed after AGI's initial inspection included removal of all waste materials and excavation of approximately 5.1 cubic yards of impacted soil. During a follow-up inspection conducted in April 2023, AGI did not observe any obvious petroleum staining or pooled liquids within the excavation area.*
X		**55-gallon drum or large sack storage** *An apparent illegal dump site was noted in the driveway entrance for the former dwelling on the eastern portion of the property. Three 55-gallon drums containing petroleum products and waste were noted within the dump area.* *Subsequent clean-up activities performed after AGI's initial inspection included removal of all drums and waste materials. During a follow-up inspection conducted in April 2023, AGI did not observe any drums or containers on the property.*
	X	**Unidentified substance containers**
	X	**Stains and/or corrosion on floors, walls or ceiling (except water)**
	X	**Drains and sumps**
	X	**Oil-water separator/clarifier**
	X	**Electrical or hydraulic equipment known to contain PCBs**
	X	**Obvious signs of possible ACMs**
	X	**Obvious signs of mold**
	X	**Other areas of environmental concern**

5.0. MATERIAL STORAGE

At least three 55-gallon drums and several smaller containers filled with petroleum products were observed in an illegal dump site located on the eastern portion of the subject property. Subsequent clean-up activities have since removed all petroleum products from the subject property.

No other current or historic containers, storage vessels, and containment systems (e.g., clarifiers, oil/water separators, vaults, frac ponds, tanks, drums, storage lockers, silos) of 55 gallons or more for individual containers, or 100 gallons in aggregate for smaller containers, were observed on the subject property or have been historically utilized on the property.

6.0. INTERVIEWS

Interviews performed during the course of this Phase I are described below.

Interviewee	Interview Summary
Property Owner	Mr. Gurbinder Singh, current property owner, was interviewed by AGI personnel on 15 March 2023. The following information was obtained from Mr. Singh: • Mr. Singh purchased the property initially in May of 2019 from the Kelley Family. • The subject property has been used exclusively for agriculture and residential. • A decommissioned septic system is located on the subject property. • Mr. Singh states that trash and debris have been illegally dumped on the subject property, including petroleum products (used automotive oil filters). Clean-up action is underway according to Mr. Singh. • No underground storage tanks, clarifiers, subsurface hoists, discarded automobile batteries, stained soil, etc. are present on the subject property. • No environmental liens, violations or lawsuits have been filed against the property. • Mr. Singh is unaware of any other potential environmental issues.
Site Manager	The property site manager was not interviewed during the course of this Phase I.
Property Occupant(s)	Property occupants were not interviewed during the course of this Phase I.
Local Government Officials	With the exception of file review requests, no local government officials were interviewed during the course of this Phase I.
Others	No additional interviews were performed during the course of this Phase I.

ASTM-compliant interview/questionnaire documentation is provided as Appendix D.

7.0. BUSINESS ENVIRONMENTAL RISKS – NON-ASTM SERVICES

Additional environmental considerations beyond the scope of the standard ASTM practice that have the potential to pose business environmental risks are discussed below.

7.1. MOLD

Molds are part of the natural environment. Outdoors, molds play a part in nature by breaking down dead organic matter such as fallen leaves and dead trees, but indoors, mold growth should be avoided. Molds reproduce by means of tiny spores; the spores are invisible to the naked eye and float through outdoor and indoor air. Mold may begin growing indoors when mold spores land on surfaces that are wet. There are many types of mold, and none of them will grow without water or moisture.

Molds are usually not a problem indoors, unless mold spores land on a wet or damp spot and begin growing. Molds have the potential to cause health problems. Molds produce allergens (substances that can cause allergic reactions), irritants, and in some cases, potentially toxic substances (mycotoxins).

No structures are located on the property.

7.2. ASBESTOS CONTAINING BUILDING MATERIALS

Asbestos is a mineral fiber that has been used commonly in a variety of building construction materials. Asbestos was introduced to building materials on large scale during the 20th century because of its physical properties demonstrating its abilities as insulation, fire-retardant, material strengthening and durability, and it served as a good binding product. Because of these properties, asbestos has been used for a wide range of manufactured goods, mostly in building materials (roofing shingles, ceiling and floor tiles, paper products, and asbestos cement products), friction products (automobile clutch, brake, and transmission parts), heat-resistant fabrics, packaging, gaskets, and coatings.

Prior to the late 1970s, building products and insulation materials commonly contained asbestos. In 1989, the USEPA banned all new uses of asbestos; however, certain uses developed before 1989 are still allowed. When asbestos-containing materials are damaged or disturbed by maintenance, repair, remodeling or demolition activities, microscopic fibers can become airborne and inhaled into the lungs, where they can cause significant health problems.

No structures are located on the property.

7.3. LEAD-BASED PAINT

Lead is a toxic metal that was used for many years in products found in and around our homes. Lead-based paint (LBP) was used extensively in buildings constructed before 1950. In 1978, LBP was banned by the federal government. Lead may cause a range of health defects, from behavioral problems and learning disabilities, to seizures and death.

No structures are located on the property.

7.4. RADON

Radon is a naturally occurring, colorless, odorless gas that is soluble in water. It is produced through the radioactive decay of uranium and radium, which is naturally present in soil and in minerals in bedrock. Radon is radioactive, which means that it breaks down or decays to form other elements. Radon concentrations generally differ among different rock types and can vary considerably within the same geologic formation. Radon moves from its source in rocks and soils through voids and fractures. It can enter buildings as a gas through foundation cracks or it can dissolve in ground water and be carried to buildings through the use of water-supply wells. Buildings with basements and concrete slab foundations are more susceptible to elevated levels of indoor radon gas. The inhalation of radon gas can cause damage to lung tissue.

A common unit of radioactivity measurement is picocuries per liter (pCi/L). The USEPA established the recommended safe radon level at 4 pCi/L. According to the USEPA, the subject property county, San Joaquin, is located in a low radon potential area (Zone 3), defined as having a 'predicted average indoor radon screening level of less than 2 pCi/L'.

7.5. WETLANDS AND SURFACE WATERS

As reported in Section 3.2., according to the EDR Report (Appendix C) the subject property is not located within the National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR from the U.S. Fish and Wildlife Service.

7.6. REGULATORY COMPLIANCE

AGI searched the subject property addresses on local, state and federal databases. No records were found regarding any outstanding regulatory permitting or requirements/directives in connection with the property.

8.0. EVALUATION

Any deviations from the ASTM Standard Practice 1527E-21 and USEPA AAI are

presented below, along with the findings, conclusions, and opinions identified during the course of this Phase I.

8.1. DATA GAPS AND LIMITATIONS

A data gap occurs when a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance, and interviews. The following data gaps and/or limitations were identified during the course of this Phase I, which may deviate from the ASTM standard practice:

- The largest data gap in research was 47 years, between 1888 and 1937, with the earliest researched information being a Topographic Map dated 1888. Data gaps do not exceed five years between 1937 through the present. AGI does not believe any gaps in the data reviewed have affected the ability to identify potential environmental issues.

8.2. FINDINGS

Based on the standards set by ASTM Practice E1527-21, the following findings are differentiated below as Business Environmental Risk (including the presence of asbestos-containing materials, lead-based paint, mold or moisture conditions, or non-hazardous regulated materials may constitute a Business Environmental Risk), de minimis conditions unlikely to be subject to government enforcement, HRECs, CRECs and RECs, as defined in Section 1.1. of this report

8.2.1. Business Environmental Risk

This assessment has revealed no evidence of potential Business Environmental Risks in connection with the subject property with the exception of the abandoned water well. If the well will not be rehabilitated for future use, the well should be destroyed under permit.

8.2.2. *De Minimis* Conditions

This assessment revealed no evidence of potential or *de minimis* conditions in connection with the subject property.

8.2.3. Historical Recognized Environmental Conditions

This assessment has revealed no evidence of HRECs in connection with the subject property.

8.2.4. Controlled Recognized Environmental Conditions

This assessment has revealed no evidence of CRECs in connection with the subject property.

8.2.5. Recognized Environmental Conditions

This assessment has revealed no evidence of RECs in connection with the subject property.

8.2.6. Other Potential Environmental Issues

This assessment has revealed no evidence of other non-ASTM-defined environmental issues in connection with the subject property except for the petroleum-containing waste observed on the eastern portion of the subject property during the initial property inspection on 15 March 2023. Several drums and other containers containing waste oil, oil, used oil filters, paint and other wastes were illegally dumped near the former driveway entrance onto the eastern subject parcel. Several of the drums and containers were open and spilling petroleum contents onto bare soil.

In March 2023, the property owner contracted with Clean Harbors to remove the waste materials and cleanup the petroleum-impacted soils. Response activities began on 18 March 2023. Clean-up activities included the removal of all waste materials and contaminated construction waste. Additionally, approximately 5.1 cubic yards of impacted soil were excavated and placed in covered bins for disposal. Representatives for Clean Harbors reportedly utilized visual observations to determine that all impacted soil was removed.

On 05 April 2023, AGI conducted a follow-up inspection of the subject property. No obvious petroleum staining or odors were observed in soils remaining within the excavation area. Any residual petroleum contamination (if any) will likely be minimal and not of significant concern to the subject property. Confirmation soil-sampling was not conducted by Clean Harbors during the March 2023 clean-up; however, confirmation soil samples should be considered to validate that the impacted soil has been successfully removed.

8.3. CONCLUSIONS AND OPINION

AGI has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13, US-EPA AAI for the property located at 11293 South Manthey Road and 169 Manila Road, Lathrop, California.

It is the opinion of the environmental professionals that the findings and conclusions presented in this report are reasonable and prudent, given the evidence as presented. AGI did not identify any RECs on the subject property during the course of the Phase I.

However, several drums of waste oil, oil, oil filters and paint were dumped and impacted the soil on the eastern portion of the property in early March 2023. In mid-March 2023, 5.1 cubic yards of soil were excavated for disposal. Only visual observations were utilized to determine the extent of the excavation. While the soil visually appears clean, confirmation soil samples should be considered to validate the successful removal of the impacted soil.

8.4. SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR § 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Rebecca Natal
Project Scientist

Robert D. Loeffler, P.G.
Senior Geologist/ Vice President
Registered Environmental Property Assessor No. 136161

8.5. QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Qualifications of the environmental professionals involved in the preparation of this Phase I are included in Appendix F.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AdvancedGeo, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Phase I Environmental Site Assessment
KELLEY - MANTHEY PROPERTY
11293 South Manthey Road, Lathrop, California 95330

EXECUTIVE SUMMARY

Advanced GeoEnvironmental, Inc. conducted this Phase I Environmental Site Assessment of the property located at 11293 South Manthey Road, Lathrop, San Joaquin County, California 95330, in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).

PROPERTY USE

The subject property is a 11.4-acre parcel south of Roth Road. Manthey Road crosses through the eastern portion of the property parcel. The subject property is located within a mixed agricultural and commercial area of the City of Lathrop, San Joaquin County, California. The property is undeveloped land, with several remnants of a former residence remaining at the site, including a well pump and electric meter.

Based on a review of historical documents, the subject property has utilized agriculturally since the late 1930s. Several farm and homestead structures have been located at the property over time. Between the late 1960s to mid-1970s, Manthey Road was developed through the eastern portion of the subject property.

FINDINGS

Based on the standards set by ASTM Standard Practice E1527-13, a recognized environmental condition (REC) is the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. Conditions that are determined to be *de minimis*, which do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies, are not recognized environmental conditions. Conditions that are considered Business Environmental Risk include the presence of asbestos-containing materials, lead-based paint, mold or moisture conditions, or non-hazardous regulated materials.

The standard further identifies historical RECs and controlled RECs. An historical REC (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of

the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. A controlled REC (CREC) is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

The following findings are differentiated below as Business Environmental Risks and *de minimis* conditions unlikely to be subject to government enforcement, HRECs, CRECs and RECs.

BUSINESS ENVIRONMENTAL RISK

This assessment revealed no evidence of potential Business Environmental Risks in connection with the subject property.

DE MINIMIS CONDITIONS

This assessment revealed no evidence of potential or *de minimis* conditions in connection with the subject property.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

This assessment has revealed no evidence of HRECs in connection with the subject property.

CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

This assessment has revealed no evidence of CRECs in connection with the subject property.

RECOGNIZED ENVIRONMENTAL CONDITIONS

This assessment has revealed no evidence of RECs in connection with the subject property.

CONCLUSIONS AND OPINION

Advanced GeoEnvironmental, Inc. has performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-13, US-EPA AAI for the property located at 11293 South Manthey Road, Lathrop, California 95330. It is the opinion of the environmental professionals that the findings and conclusions presented in this report are reasonable and prudent, given the evidence as presented. AGE did not identify any REC's on the subject property during the course of the Phase I. AGE has no recommendations for additional investigations at the subject property at this time.

Phase I Environmental Site Assessment
KELLEY - MANTHEY PROPERTY
11293 South Manthey Road, Lathrop, California 95330

1.0. INTRODUCTION

Advanced GeoEnvironmental, Inc. (AGE) has been retained by Gurbinder Singh of Singh Petroleum Investments to perform a Phase I Environmental Site Assessment (Phase I) of the property located at 11293 South Manthey Road, Lathrop, San Joaquin County, California 95330 (hereafter referred to as subject property or property). The Phase I was performed in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the United States Environmental Protection Agency (USEPA) Standards and Practices for 'All Appropriate Inquiries (AAI)' (40 CFR Part 312). The Phase I is designed to provide the Client (user) with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

1.1. PURPOSE

The purpose of the Phase I is to identify and assess environmental characteristics of the subject property that could lead to liability in the event of ownership, that could have a potential impact on property value or that could impact the present or future use of the subject property.

The purpose of ASTM Standard Practice E1527-13 and USEPA AAI is to define good commercial and customary practice for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the *Comprehensive Environmental Response Compensation and Liability Act* (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses of the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35)(B). An evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that identified in this practice (based on ASTM Practice E1527-13).

The goal of ASTM Standard Practice E1527-13 is to identify *recognized environmental conditions* (RECs) in connection with the subject property. A REC is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. Conditions that are determined to be *de minimis*, which do not present a threat to human health or the environment and that generally would not be

the subject of an enforcement action if brought to the attention of appropriate governmental agencies, are not recognized environmental conditions.

The standard further identifies historical RECs and controlled RECs. A historical REC (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. A controlled REC (CREC) is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

1.2. SITE DESCRIPTION

The subject property is a 11.4-acre parcel south of Roth Road. Manthey Road crosses through the eastern portion of the property parcel. The subject property is located within a mixed agricultural and commercial area of the City of Lathrop, San Joaquin County, California. Further property location descriptions, characteristics, improvements, and site vicinity characteristics are discussed below.

1.2.1. Location and Legal Description

The subject property location can be identified as the following:

Site Address	11293 S Manthey Rd Acampo CA 95220
Assessor's Parcel Number (APN)	191-250-140-000
Property Owner	Kelley, Kanwar S
Land Use Type	Single Family Residential
Legal Description	None provided
Size of Property	11.400

The parcel map and owner information were provided by ParcelQuest/CD Data as a representation of current data downloaded monthly from the County Assessor's Office. Copies of the parcel map and the owner information are provided in Appendix B.

1.2.2. Site and Vicinity General Characteristics

The subject property is located within a mixed agricultural and commercial area of the City of Lathrop, San Joaquin County, California. Figure 1 shows the setting of the subject

property (7.5 Minute United States Geological Survey [USGS] Topographic Series, Lathrop, California). Photographs of the subject property are provided in Appendix A.

1.2.3. Current Use of Property

The property is undeveloped land, with several remnants of a former residence remaining at the site, including a well pump and electric meter. It is likely the domestic well remains at the property.

1.3. DETAILED SCOPE-OF-SERVICES

Except where identified in Section 8.1., the scope of work for this Phase I conforms to ASTM Standard Practice E1527-13 and the USEPA AAI (40 CFR Part 312). Any additional User requested scope of services are discussed in Section 7.0.

1.4. SIGNIFICANT ASSUMPTIONS

Our professional services were performed using that degree of care and skill ordinarily exercised by environmental consultants practicing in this or similar fields. Findings were based mainly upon examination of historical records, maps, aerial photographs and government agency lists, on a site reconnaissance visit, and on information obtained during personal interviews with persons of long-term familiarity with the subject property as specified in ASTM E1527-13 and the USEPA AAI. Hazardous waste site lists presented in this report represents only a search of specific government records as listed below. AGE is aware additional government records may exist. It should be noted that government agencies often do not list all sites with environmental contamination or that the list could be inaccurate and/or incomplete.

Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites, are assumed based on geologic interpretations from available sources. AGE assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.5. LIMITATIONS AND EXCEPTIONS

Property conditions, as well as local, state, tribal and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences

made are reasonably representative of the property. AGE makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

Considerations identified as beyond the scope of an ASTM Phase I that may affect business environmental risks at a property include the following: asbestos-containing materials (ACMs); biological agents; cultural and historic resources; ecological resources; endangered species; health and safety; indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment; industrial hygiene; lead-based paint (LBP); lead in drinking water; mold; radon; regulatory compliance; and wetlands. These environmental issues may warrant assessment based on the type of property or transaction, however, they are considered non-scope issues under ASTM Practice E1527-13. Any addition of non-scope items must be agreed upon between the user and AGE prior to initiation of the Phase I.

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of investigation into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property visit.

1.6. SPECIAL TERMS AND CONDITIONS

There were no special terms or conditions, agreed upon by the environmental professional, beyond the initial agreed upon scope of work, used in preparation of this report.

1.7. USER RELIANCE

Conclusions and recommendations in this report are based on findings regarding historical use of the site, and on features noted during the site reconnaissance. The absence of any potential gross contamination sources, historic or present, does not necessarily imply that the site is free of any contamination. This report only represents a ‘due diligence’ effort as to the current environmental status of the site. No other warranty, expressed or implied, is made as to the professional recommendations contained in this report.

2.0. USER PROVIDED INFORMATION

According to the ASTM Standard E1527-13 and the USEPA AAI, in order to qualify for one of the Landowner Liability Protections (LLPs) to CERCLA liability offered by the *Small Business Liability Relief and Brownfields Revitalization Act of 2001*, the client (user) must provide to the environmental professional the following information (if available) in relation to the subject property:

Title Records	A review of Title Records was not requested by the user.
Environmental Liens or Activity and Use Limitations	An environmental lien or AUL's (activity and usage limitations) search was not requested by the user.
Specialized Knowledge	AGE was not provided any specialized knowledge by the user and does have not any specialized knowledge of this property outside of what is contained in this report. The property ownership and tenants as well as all individuals who were interviewed as part of this investigation, have not reported any specialized knowledge of this property outside of what is contained in this report.
Commonly Known or Reasonably Ascertainable Information	The user provided no commonly known or reasonably ascertainable information available within the local community about the subject property that is material to recognized environmental conditions in connection with the property.
Valuation Reduction for Environmental Issues	No property valuation reduction related to environmental issues or concerns was reported by the user.
Owner, Property Manager, and Occupant Information	No written or verbal communication with the property owner, manager and/or occupant revealed any information which suggested that there are currently or historically any recognized environmental conditions associated with the subject property not noted in this assessment.
Reason for Performing Phase I	Potential property transaction
Other	No modifications to the ASTM E1527-13 standard scope-of-services were requested by the user for special circumstances that might be encountered at the subject property. Any additional user requested scope of services are discussed in Section 7.0.

Failure to provide the above information could result in a determination that 'all appropriate inquiries' are not complete. Additional items should be collected, if available, and provided to AGE.

3.0. RECORDS REVIEW

The purpose of obtaining and reviewing subject property and site vicinity historical, physical setting, and regulatory records is to help identify *recognized environmental conditions* in connection with the subject property.

3.1. HISTORICAL USE INFORMATION

The objective of consulting historical sources for a Phase I is to develop a history of previous uses of the property and surrounding area to help identify the likelihood of past uses having led to recognized environmental conditions with respect to the property. All obvious uses shall be identified from the present to the property's first obvious developed use, or back to 1940, whichever is earlier. Review of standard sources at less than five-year intervals is not required.

3.1.1. Historical Use Information on Subject Property

Subject property history was researched by reviewing historical Sanborn Fire Insurance Maps (no coverage), aerial photographs, topographic maps, telephone directory information, San Joaquin County Assessor's Office records and the San Joaquin County Community Development Department records.

Based on a review of historical documents, the subject property has utilized agriculturally since the late 1930s. Several farm and homestead structures have been located at the property over time. Between the late 1960s to mid-1970s, Manthey Road was developed through the eastern portion of the subject property.

In summary, review of the historical documents revealed no features on the subject property of environmental concern. Representative historical records are provided within Appendix B.

3.1.1.1. Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas but are now utilized as a valuable source of historical and environmental risk information. EDR owns the largest collection of Sanborn Fire Insurance Maps. AGE requested EDR to provide any Sanborn Fire Insurance Maps that might cover the subject property. Sanborn Fire Insurance Map coverage is not available for the subject property.

3.1.1.2. Aerial Photographs

AGE reviewed aerial photographs of the subject property and surrounding area that were provided by EDR for the years 1937, 1940, 1957, 1963, 1968, 1975, 1982, 1993, 2006, 2009, 2012, and 2016. The following is a summary of our review of the aerial photographs:

Year(s)	Aerial Photo Summary
1937	*Subject Property:* Agricultural land
	North: Agricultural land and a small farm structure
	South: Agricultural land
	East: Agricultural land, including several farm/homestead structures, beyond is a road in the approximate position of the Interstate 5.
	West: Agricultural land
1940, 1957, 1963	*Subject Property:* Agricultural land. Approximately three small farm structures are visible in the eastern portion of the property. By 1957, only one structure appears to remain in the southeast portion of the property.
	North: Agricultural land
	South: Agricultural land
	East: Agricultural land, including a farm structure to the northeast, beyond is a road in the approximate position of the 5 Freeway. Additional homestead/farm structures are developed in the late 1950s.
	West: Agricultural land
1968	*Subject Property:* A large house is visible in the eastern portion of the property the remainder of the property is agricultural.
	North: Agricultural land and a homestead
	South: Agricultural land and a homestead
	East: Agricultural land, including a homestead and farm structures, beyond is a road in the approximate position of Interstate 5. By 1975, Interstate 5 Freeway onramps and offramps are developed in their current location.
	West: Agricultural land
1975, 1982, 1993, 2006, 2009, 2012, 2016	*Subject Property:* Manthey Road is developed east of the property house. The land beyond Manthey Road in the eastern portion of the property, appears to be vacant land. The remainder of the property is agricultural.
	North: Agricultural land and a homestead
	South: Agricultural land and a homestead
	East: Interstate 5 Freeway, onramps and offramps are developed in the current position.
	West: Agricultural land

A review of historical aerial photographs did not reveal any items of environmental concern in connection with the subject property.

3.1.1.3. Historical Topographic Maps

AGE reviewed historical topographic maps of the subject property and surrounding area that were supplied by EDR for the years 1915, 1952, 1968, 1976, 1987, 1994, 1996 and 2012. The following is a summary of our review of the topographic maps:

Year(s)	Historical Topographic Map Summary
1915, 1952	*Subject Property:* Undeveloped land
	North: Undeveloped land
	South: Undeveloped land
	East: Undeveloped land beyond is a road in the approximate position of the 5 Freeway. By 1952, numerous small building footprints are mapped west of the road.
	West: Undeveloped land
1968	*Subject Property:* Two small building footprints are mapped in the eastern portion of the property.
	North: Four residential building footprints are mapped.
	South: Two residential building footprints are mapped.
	East: Numerous small building footprints are mapped beyond are two roads in the approximate position of the 5 Freeway.
	West: Undeveloped land
1976, 1987, 1994, 1996	*Subject Property:* Manthey Road is mapped through the eastern portion of the property. One small building footprint remains mapped west of Manthey Road.
	North: Four residential building footprints are mapped. Roth Road is mapped to the northeast.
	South: One residential building footprint is mapped.
	East: The 5 Freeway, on-ramps and off-ramps are newly developed.
	West: Undeveloped land
2012	Similar to previous maps, however no property use details are mapped.

A review of historical topographic maps did not reveal any items of environmental concern in connection with the subject property.

3.1.1.4. Street Directories

AGE requested that EDR provide a review of city and street directories to determine the occupancy history of the property for the years 1975, 1980, 1985, 1992, 1995, 2000, 2005, 2010 and 2014. The following is a summary of the city directory search:

Year(s)	Directory Listing Summary
1975, 1980, 1985, 1992, 1995	Address not listed
2000	Chastian, Gina M.
2005	Kelley, Kanwarjit S. Shiva Express Inc.
2010	Kelley, Gurdip Kelley, Kanwar S. Shiva Express Inc.
2014	Kelley, Gurdip Shiva Express Inc.

A review of historical telephone directory listings of the subject property address did not reveal any items of environmental concern.

3.1.1.5. Building Department Records

A review of San Joaquin County Community Development Department records is summarized in the following table:

Year(s)	Summary
1995	Permit to tear off, re-sheath, and re-roof with composite roofing.
2006	Merger Application for APN:191-250-08 and 191-50-11 into one parcel. Location: On the west side of Manthey Road, approximately 740-feet north of Manila Road (Lathrop).
2009	Use Permit Application and associated documents to establish a truck stop, hotel, convenience store with automobile fuel island and full-service restaurant to be built in three phases.
2016	Withdrawn Permit to repair fire damaged single-family residence. Rebuild roof with new trusses, rebuild den and attached garage.

A review of historical public building of the subject property address did not reveal any items of environmental concern with the exception of the 2009 permit to establish a truck stop with a fuel island.

3.1.1.6. Assessor's Records

A review of San Joaquin County Assessor's records is summarized in the following table:

Year(s)	Summary
1968	Residential Building Record for a 1,337-square foot single-story, two-bedroom home, 440-square foot garage and 600-sqaure foot equipment shed.

A review of historical assessor's records of the subject property address did not reveal any items of environmental concern.

3.1.1.7. Previous Phase I and II Environmental Site Assessments

No previous Phase I or II Environmental Site Assessments were provided to AGE by the user and/or property owner during the course of this Phase I.

3.1.2. Historical Use Information on Adjoining Properties

Historical use of immediately adjoining properties has been agricultural land and homesteads since the late 1930s. The 5 Freeway was developed to the west in the early 1970s.

Historical uses of adjoining properties do not appear to be of environmental concern to the subject property.

3.2. PHYSICAL SETTING

Geology	The subject property is situated within the Great Valley Geomorphic Province of California, an elongate, northwest trending structural trough running 400 miles through Central California. The Great Valley is bound to the north by the Klamath Mountains, the south by the Tehachapi Mountains, the east by the Sierra Nevada Mountains, and the west by the Coast Ranges. Approximately 32,000 feet of marine and continental sediment have been deposited almost continuously since the Jurassic. The northern and southern regions of the Great Valley are designated the Sacramento and San Joaquin Valleys, respectively. The subject property is located within the San Joaquin Valley.
Hydrology	The subject property and surrounding area lie within the San Joaquin Valley Groundwater Basin, Eastern San Joaquin Subbasin (5-22.01). This subbasin is bound on the south, southwest, and west by the Modesto, Delta-Mendota, and Tracy Subbasins, respectively, and on the northwest and north by the Solano, South American, and Cosumnes Subbasins. The Solano and South American

Hydrology	are subbasins of the Sacramento Valley Groundwater Basin. The Eastern San Joaquin Subbasin is drained by the San Joaquin River and several of its major tributaries namely, the Stanislaus, and Calaveras, and Mokelumne Rivers. The San Joaquin River flows northward into the Sacramento and San Joaquin Delta and discharged into the San Francisco Bay. Annual precipitation within the subbasin ranges from about 11 inches in the southwest to about 25 inches in the northeast. Groundwater information collected from the State of California Geotracker database indicates that groundwater is found at an approximate depth of 22 feet below surface grade and flows to the north-northwest.
Topography	The property is located at an elevation of approximately 17 feet above mean sea level (MSL), in an area of low topographic relief. Regional slope of the area is toward the general west-southwest.
Surface Soils	EDR provides a report listing dominant soil composition in the general area of the subject property based on information from the United States Department of Agriculture's Soil Conservation Service STATSGO (State Soil Geographic Database) soil maps. Soil surface texture at the subject property consists of soil identified as Veritas, a fine sandy loam in the Class B Hydrogeologic Group which includes moderate infiltration rates. Corrosion potential of this soil for uncoated steel is high.
Surface Water Features	There are no surface water features on the subject property. The nearest surface water feature in the vicinity of the subject property is an agricultural pond approximately one-mile west.
Flood Zone	The EDR database report shows that the subject property is not located within either a 100-year or 500-year Flood Zone. This data, available in select counties across the country, was obtained by EDR from the Federal Emergency Management Agency (FEMA) which has maps depicting FEMA-defined 100-year and 500-year flood zones.
Wetlands	The EDR database report shows that the subject property is not located within the National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR from the U.S. Fish and Wildlife Service.

3.3. STANDARD ENVIRONMENTAL RECORD SOURCES

A computer search of federal, state and regional regulatory agency databases was performed by Environmental Data Resources Inc. (EDR), a data retrieval company, to provide current regulatory database information compiled by a variety of federal and state regulatory agencies. A complete list and description of databases investigated, in compliance with ASTM E1527-13 and USEPA AAI, is included in EDR Report provided in Appendix C.

3.3.1. Subject Property Database Search

Subject property address 11293 South Manthey Road, Lathrop, California 95330 was listed under the facility name *Gurdip Kelly* on the following governmental databases in the EDR Report. The property was listed on the HAZNET database indicating 0.46-ton of asbestos containing waste was generated at the site in 2015.

3.3.2. Site Vicinity Database Search

Sites with recognized environmental conditions surrounding the subject property are typically of concern to the subject property when they are located in an up-gradient direction from the property with respect to the ground water flow direction. Typically, groundwater would represent the migration medium for contaminants over significant distances. Sites located in equi-gradient or down-gradient directions from the subject property are less likely to impact the subject property.

AGE retained EDR to provide current regulatory database information compiled by a variety of federal and state regulatory agencies. A copy of the complete database is included in Appendix C. The following information was obtained:

Type	Regulatory Agency Database	AMSD	Number of Sites within the AMSD
Federal	National Priority List Sites: **NPL, Proposed NPL, NPL LIENS**	1mile	**1**
Federal	Delisted National Priority List Sites: **Delisted NPL**	½-mile	0
Federal	Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Sites: **FEDERAL FACILITY, SEMS**	½-mile	**1**
Federal	CERCLIS No Further Remediation Action Planned (NFRAP) Sites: **SEMS-ARCHIVE**	½-mile	0
Federal	Resource Conservation and Recovery Act (RCRA) Corrective Action Report Sites: **CORRACTS**	1 mile	**1**
Federal	RCRA Non-CORRACTS Treatment, Storage, or Disposal (TSD) Sites: **RCRA-TSDF**	½- mile	**1**
Federal	RCRA Generator Sites: **RCRA-LQG, RCRA-SQG, RCRA - CESQG**	¼-mile	**2**
Federal	Institutional Control/Engineering Control Registry Sites: **LUCIS, US ENG CONTROLS, US INST CONTROL**	½-mile	**1**

Type	Regulatory Agency Database	AMSD	Number of Sites within the AMSD
Federal	Environmental Response and Notification System Sites: **ERNS**	<1/8-mile	0
State & Tribal	Equivalent to NPL: **RESPONSE**	1 mile	0
State & Tribal	Equivalent to CERCLIS: **ENVIROSTOR**	1 mile	**5**
State & Tribal	Solid Waste Disposal Facilities and/or Landfill Sites: **SWF/LF**	½-mile	0
State & Tribal	Leaking Storage Tank Sites: **LUST, INDIAN LUST, SLIC**	½-mile	**2**
State & Tribal	Registered Storage Tank Sites: **FEMA UST, UST, AST, INDIAN UST**	¼-mile	**11**
State & Tribal	Voluntary Cleanup Sites: **INDIAN VCP, VCP**	½-mile	0
State, Tribal and Local	Brownfield Sites: **BROWNFIELDS, US BROWNFIELDS**	½-mile	0
Local	Registered Storage Tank Sites: **SWEEPS UST, HIST UST, CA FID UST**	¼-mile	**5**
Local	Dry Cleaning Facility Sites: **DRYCLEANERS**	¼-mile	0
Either	Unmappable Database Listings: **orphan sites**	Database dependent	**4**

AMSD: Appropriate Minimum Search Distance

AGE's review of the referenced databases also considered the potential or likelihood of contamination from adjoining and nearby sites. To evaluate which of the adjoining and nearby sites identified in the regulatory database report present an environmental risk to the subject property, AGE considered the following:

- The type of database on which the site is identified;
- The topographic position of the identified site relative to the subject property;
- The direction and distance of the identified site from the subject property;
- Local soil conditions in the subject property area;
- The known or inferred groundwater flow direction in the subject property area;
- The status of the respective regulatory agency-required investigation(s) of the identified site (if any); and
- Surface and subsurface obstructions and diversions (e.g., buildings, roads, sewer systems, utility service lines, rivers, lakes and ditches located between the identified site and the subject property.

Only those sites that are judged to present a potential environmental risk to the subject property and/or warrant additional clarification are further evaluated. Using the referenced criteria and based on a review of readily available information contained within the regulatory database report, AGE did not identify adjacent or nearby sites (e.g. within ¼-mile radius) listed on the regulatory database report that were judged to present a potential environmental risk to the subject property.

3.4. ADDITIONAL ENVIRONMENTAL AGENCY RECORD SOURCES

In addition to the EDR computer search of federal, state and regional regulatory agency databases, AGE contacted appropriate regulatory agencies to review records regarding the property and surrounding sites identified as having recognized environmental conditions that have the potential to impact the subject property based on groundwater flow direction, distance from the subject property and nature of the releases causing the environmental condition.

Additional agency searches include the following:

- San Joaquin County Environmental Health Department (SJCEHD) and the Central Valley Regional Water Quality Control Board (Regional Board) maintain records of industrial violations for this area and are the lead agencies for the enforcement of the State Underground Storage Tank and Hazardous Waste Laws for San Joaquin County. AGE requested to review any files that were available.
- The Regional Board also maintains and online computer database, GeoTracker, that provides listings of closed and active sites related to unauthorized releases of hydrocarbons as well as solvents, metals, and other materials. For listed sites, online reports are commonly available. AGE reviewed the GeoTracker database for information that may be available for the subject property or surrounding sites.
- The California Department of Toxic Substances Control (DTSC) is the State of California agency responsible for oversight of hazardous waste regulations, cleanup of existing contamination, pollution prevention and reduction in hazardous waste and toxic materials and identification of potential new pollutants. The DTSC maintains the EnviroStor Data Management System (ENVIROSTOR) which allows for the search for information on investigation, cleanup, permitting and/or corrective actions that are planned, being conducted or have been completed under DTSC oversight. AGE reviewed the ENVIROSTOR database for any information that may be available.
- The United States Environmental Protection Agency (USEPA) provides an online computer database, ENVIROFACTS, providing lists of sites listed on multiple USEPA databases. AGE reviewed the ENVIROFACTS database for any information that may be available.
- San Joaquin Valley Air Pollution Control District (SJVAPCD) – is a public health agency whose mission is to improve the health and quality of life for all Valley

residents through efficient and effective air quality management strategies. AGE contacted the SJVAPCD for any information that may be available.

- Division of Oil, Gas and Geothermal Resources (DOGGR) maintains a website, DOGGR Online Mapping (DOM) system, allowing for the search of oil and gas related information. AGE reviewed the DOM system for any oil and gas information in the vicinity of the property.

3.4.1. Additional Subject Property Record Sources

The subject property address was searched on the following record sources:

SOURCE	SUMMARY
Regional Board & GeoTracker database	Property address was not listed on the GeoTracker database and did not have any records on-file with the Regional Board.
DTSC & ENVIROSTOR database	Property address was not listed on the ENVIROSTOR database and did not have any records on-file with the DTSC.
USEPA ENVIROFACTS	Property address was not listed on the ENVIROFACTs database.
SJVAPCD	Property address was not identified as having records on-file with the SJVAPCD.
SJCEHD	Property address was identified as having records on-file with the SJCEHD regarding installation of a septic system and percolation tests.
DOM System	According to the DOM System, no oil and/or gas wells are located in the vicinity of the subject property.

3.4.2. Additional Site Vicinity Record Sources

The SJCEHD and Regional Board maintain records for, and are responsible for, enforcement of state UST and hazardous waste laws. AGE commonly reviews files for up-gradient sites under active environmental regulation to ascertain the current site status and its potential to impact the subject property. No sites, under active or past environmental regulation, were identified by the database search within the required search radius of potential concern to the property.

3.5. PROVIDED SUBJECT PROPERTY RECORDS

The following records were provided to AGE by the user and/or property owner during the course of this Phase I:

- Assessor Parcel Map
- 2018 - Plan Application, Use Permit Application, Zone Reclassification Application Site Plan, and Traffic Survey regarding use of the property as a UPS truck terminal.

3.6. VAPOR ENCROACHMENT CONDITION

The encroachment of hydrocarbon and volatile organic compound (VOC) vapors into soil pore space occurs when organic chemicals migrate from contaminated groundwater or soil into the airspace between soil particles. Some typical organics involved are petroleum based or chlorinated solvents (e.g, BTEX and dry-cleaning chemicals). They may have leaked into the groundwater and/or soil from underground storage tanks, or buried waste, or from disposal in septic systems.

In compliance with ASTM Standard E2600-15 (Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions), AGE evaluated the potential for a Vapor Encroachment Condition (VEC) at the subject property. Based on a VEC screening, it was determined that 'a VEC does not exist' at the property. A copy of the AGE-generated Tier 1 VEC screening form is provided within Appendix E.

4.0. SITE RECONNAISSANCE

A subject property site reconnaissance was conducted by an AGE representative on 21 March 2019. At the time of the site visit the weather was clear and warm. Primary features of the property are shown in a site plan provided in Figure 2. Photographs of selected features of the subject site are included in Appendix A.

4.1. METHODOLOGY AND LIMITING CONDITIONS

The property was fully accessible during the site reconnaissance. No limiting conditions were noted.

4.2. GENERAL SITE SETTING

The following is a description of the primary features of the subject property observed at the time of the site visit:

The property is undeveloped land, with several remnants of a former residence remaining at the site, including a well pump and electric meter. Numerous tires, an empty 55-gallon drum, containers of coolant and miscellaneous debris appear to have been disposed of at the property.

The following is a description of the property improvements:

Structures	Weathered remnants of a possible wood barn / out-building.
Adjoining / Access / Egress Roads	The property is accessible via Manthey Road. A portion of an asphalt driveway is located west of Manthey Road.
Surface Types	The property is covered with grass and weeds. A portion of an asphalt driveway is located west of Manthey Road.
Additional Features	None
Surface Water	None
Potable Water Source	None observed
Sanitary Sewer Utility	None observed
Storm Drain Utility	None observed
Electric Utility	Pacific Gas and Electric
Natural Gas Utility	None observed

At the time of the site reconnaissance, current uses of adjacent properties included the following:

North	Agricultural land and residence, APN: 193-330-36 and 11199 South Manthey Road
South	Agricultural land and residence, 11401 South Manthey Road
East	5 Freeway
West	Agricultural land, APN: 191-250-06

Current uses of the adjoining properties do not appear to be of potential environmental concern to the subject property.

4.3. EXTERIOR AND INTERIOR OBSERVATIONS

The following was observed at the time of the property reconnaissance:

YES	NO	CONDITION OBSERVED ON/AT SUBJECT PROPERTY
	X	**Pits, ponds or lagoons with respect to waste treatment or disposal**
	X	**Stained soil or pavement, patched pavement**
	X	**Stressed vegetation (from causes other than insufficient water)**
	X	**Fill dirt from unknown source, or contaminated source**
	X	**Solid waste (mounds or depressions suggesting waste disposal)**
	X	**Waste water / storm water discharged into a drain, ditch or stream**

YES	NO	CONDITION OBSERVED ON/AT SUBJECT PROPERTY
X		**Wells (abandoned, irrigation, domestic, monitoring or oil and gas)** *A vertical turbine well pump and above ground piping were observed near the location of the former residence, near Manthey Road. It is likely the domestic well is in this location.*

5.0. MATERIAL STORAGE

No current or historic containers, storage vessels, and containment systems (e.g., clarifiers, oil/water separators, vaults, frac ponds, tanks, drums, storage lockers, silos) of 55 gallons or more for individual containers, or 100 gallons in aggregate for smaller containers, were observed on the subject property or have been historically utilized on the property.

6.0. INTERVIEWS

Interviews performed during the course of this Phase I are described below. AGE Forwarded an ASTM-compliant questionnaire to the property owner however it has not been returned to AGE as of the publication date of this report.

7.0. BUSINESS ENVIRONMENTAL RISKS – NON-ASTM SERVICES

Additional environmental considerations beyond the scope of the standard ASTM practice that have the potential to pose business environmental risks are discussed below.

7.1. MOLD

Molds are part of the natural environment. Outdoors, molds play a part in nature by breaking down dead organic matter such as fallen leaves and dead trees, but indoors, mold growth should be avoided. Molds reproduce by means of tiny spores; the spores are invisible to the naked eye and float through outdoor and indoor air. Mold may begin growing indoors when mold spores land on surfaces that are wet. There are many types of mold, and none of them will grow without water or moisture.

Molds are usually not a problem indoors, unless mold spores land on a wet or damp spot and begin growing. Molds have the potential to cause health problems. Molds produce allergens (substances that can cause allergic reactions), irritants, and in some cases, potentially toxic substances (mycotoxins).

No structures are located on the property.

7.2. ASBESTOS CONTAINING BUILDING MATERIALS

Asbestos is a mineral fiber that has been used commonly in a variety of building construction materials. Asbestos was introduced to building materials on large scale during the 20th century because of its physical properties demonstrating its abilities as insulation, fire-retardant, material strengthening and durability, and it served as a good binding product. Because of these properties, asbestos has been used for a wide range of manufactured goods, mostly in building materials (roofing shingles, ceiling and floor tiles, paper products, and asbestos cement products), friction products (automobile clutch, brake, and transmission parts), heat-resistant fabrics, packaging, gaskets, and coatings.

Prior to the late 1970s, building products and insulation materials commonly contained asbestos. In 1989, the USEPA banned all new uses of asbestos; however, certain uses developed before 1989 are still allowed. When asbestos-containing materials are

damaged or disturbed by maintenance, repair, remodeling or demolition activities, microscopic fibers can become airborne and inhaled into the lungs, where they can cause significant health problems.

No structures are located on the property.

7.3. LEAD-BASED PAINT

Lead is a toxic metal that was used for many years in products found in and around our homes. Lead-based paint (LBP) was used extensively in buildings constructed before 1950. In 1978, LBP was banned by the federal government. Lead may cause a range of health defects, from behavioral problems and learning disabilities, to seizures and death.

No structures are located on the property.

7.4. RADON

Radon is a naturally occurring, colorless, odorless gas that is soluble in water. It is produced through the radioactive decay of uranium and radium, which is naturally present in soil and in minerals in bedrock. Radon is radioactive, which means that it breaks down or decays to form other elements. Radon concentrations generally differ among different rock types and can vary considerably within the same geologic formation. Radon moves from its source in rocks and soils through voids and fractures. It can enter buildings as a gas through foundation cracks or it can dissolve in ground water and be carried to buildings through the use of water-supply wells. Buildings with basements and concrete slab foundations are more susceptible to elevated levels of indoor radon gas. The inhalation of radon gas can cause damage to lung tissue.

A common unit of radioactivity measurement is picocuries per liter (pCi/L). The USEPA established the recommended safe radon level at 4 pCi/L. According to the USEPA, the subject property county, San Joaquin, is located in a low radon potential area (Zone 3), defined as having a ‘predicted average indoor radon screening level of less than 2 pCi/L'.

7.5. WETLANDS

As reported in Section 3.2., according to the EDR Report (Appendix C) the subject property is not located within a National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR from the U.S. Fish and Wildlife Service.

7.6. REGULATORY COMPLIANCE

AGE searched the subject property address, 11293 South Manthey Road, Lathrop, California 95330, on local, state and federal databases. No records were found regarding any outstanding regulatory permitting or requirements/directives in connection with the property.

8.0. EVALUATION

Any deviations from the ASTM Standard Practice 1527E-13 and USEPA AAI are presented below, along with the findings, conclusions, and opinions identified during the course of this Phase I.

8.1. DATA GAPS AND LIMITATIONS

A data gap occurs when a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance, and interviews. The following data gaps and/or limitations were identified during the course of this Phase I, which may deviate from the ASTM standard practice:

- The largest data gap in research was 22 years, between 1915 and 1937, with the earliest researched information being a Topographic Map dated in 1915. Data gaps generally do not exceed five years between 1937 through the present, except between 1940 and 1952, 1968 and 1975.
- An ASTM-compliant interview/questionnaire was not conducted. The property owner was provided a questionnaire, but had not returned it by the publish date of this Phase I.

AGE does not believe any gaps in the data reviewed have affected the ability to identify recognized environmental concerns.

8.2. FINDINGS

Based on the standards set by ASTM Practice E1527-13, the following findings are differentiated below as Business Environmental Risk (including the presence of asbestos-containing materials, lead-based paint, mold or moisture conditions, or non-hazardous regulated materials may constitute a Business Environmental Risk), *de minimis* conditions unlikely to be subject to government enforcement, HRECs, CRECs and RECs, as defined in Section 1.1. of this report.

8.2.1. Business Environmental Risk

This assessment revealed no evidence of potential Business Environmental Risks in connection with the subject property.

8.2.2. *De Minimis* Conditions

This assessment revealed no evidence of potential or *de minimis* conditions in connection with the subject property.

8.2.3. Historical Recognized Environmental Conditions

This assessment has revealed no evidence of HRECs in connection with the subject property.

8.2.4. Controlled Recognized Environmental Conditions

This assessment has revealed no evidence of CRECs in connection with the subject property.

8.2.5. Recognized Environmental Conditions

This assessment has revealed no evidence of RECs in connection with the subject property.

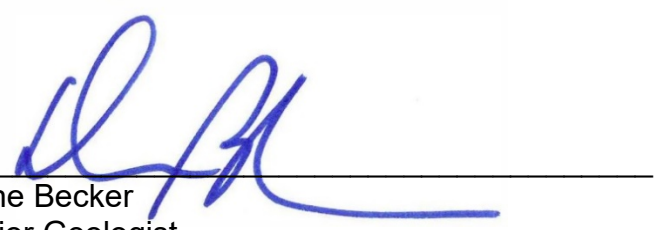
8.3. CONCLUSIONS AND OPINION

Advanced GeoEnvironmental, Inc. has performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-13, US-EPA AAI for the property located at 11293 South Manthey Road, Lathrop, California 95330. Any exceptions to, or deletions from, this practice or scope of work are described in Section 8.1. of this report or presented as non-ASTM services in Section 7.0. It is the opinion of the environmental professionals that the findings and conclusions presented in this report are reasonable and prudent, given the evidence as presented. AGE did not identify any REC's on the subject property during the course of the Phase I. AGE has no recommendations for additional investigations at the subject property at this time.

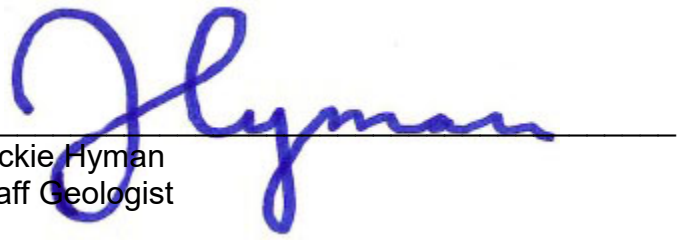
8.4. SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR § 312 and we

have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.



Diane Becker
Senior Geologist
California Professional Geologist No. 7469



Jackie Hyman
Staff Geologist

8.5. QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Qualifications of the environmental professionals involved in the preparation of this Phase I are included in Appendix F.

EXECUTIVE SUMMARY

AdvancedGeo, Inc. (AGI) conducted this Phase I Environmental Site Assessment for the property located at 169 Manila Road, Lathrop, San Joaquin County, California (subject property or property) in conformance with the scope and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries 'AAI' (40 CFR Part 312).

PROPERTY USE

The subject property is a rectangular, 10.3-acre, parcel located to the north of Manila Road in a rural/agricultural area of the city of Lathrop, California. The property is currently vacant rural grassland with no buildings or structures on the property except for an abandoned water well located on the southeast corner.

Based on a review of historical documents, the property was vacant until 1957 when a single family residence was built on the southwest corner. The residence was demolished in 1975. The property is currently vacant rural grassland.

FINDINGS

Based on the standards set by ASTM Standard Practice E1527-13, a recognized environmental condition (REC) is the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. Conditions that are determined to be *de minimis*, which do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies, are not recognized environmental conditions. Conditions that are considered Business Environmental Risk include the presence of asbestos-containing materials, lead-based paint, mold or moisture conditions, or non-hazardous regulated materials.

The standard further identifies historical RECs and controlled RECs. An historical REC (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. A controlled REC (CREC) is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

The following findings are differentiated below as Business Environmental Risks and *de minimis* conditions unlikely to be subject to government enforcement, HRECs, CRECs and RECs.

BUSINESS ENVIRONMENTAL RISKS

This assessment has revealed no evidence of potential Business Environmental Risks in connection with the subject property with the exception of the abandoned water well. If the well will not be rehabilitated for future use, the well should be destroyed under permit.

DE MINIMIS CONDITIONS

This assessment revealed no evidence of potential or *de minimis* conditions in connection with the subject property.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITION

This assessment has revealed no evidence of HRECs in connection with the subject property.

CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITION

This assessment has revealed no evidence of CRECs in connection with the subject property.

RECOGNIZED ENVIRONMENTAL CONDITIONS

This assessment has revealed no evidence of RECs in connection with the subject property.

OTHER POTENTIAL ENVIRONMENTAL ISSUES

This assessment has revealed no evidence of other potential environmental issues in connection with the subject property.

CONCLUSIONS AND OPINION

AdvancedGeo, Inc. (AGI) has performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-13, US-EPA AAI for the property located at 169 Manila Road, Lathrop, California. It is the opinion of the environmental professionals that the findings and conclusions presented in this report are reasonable and prudent, given the evidence as presented. AGI did not identify any REC's on the subject property during the course of the Phase I. AGI has no recommendations for additional investigations at the subject property at this time.

1.0. INTRODUCTION

AdvancedGeo, Inc. (AGI) has been retained by Valley Real Estate Center to perform a Phase I Environmental Site Assessment (Phase I) of the property located at 169 Manila Road, Lathrop, San Joaquin County, California (hereafter referred to as subject property or property). The Phase I was performed in conformance with the scope and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for 'All Appropriate Inquiries (AAI)' (40 CFR Part 312). The Phase I is designed to provide the Client (user) with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

1.1. PURPOSE

The purpose of the Phase I is to identify and assess environmental characteristics of the subject property that could lead to liability in the event of ownership, that could have a potential impact on property value or that could impact the present or future use of the subject property.

The purpose of ASTM Standard Practice E1527-13 and USEPA AAI is to define good commercial and customary practice for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response Compensation and Liability Act (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses of the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35)(B). An evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that identified in this practice (based on ASTM Practice E1527-13).

The goal of ASTM Standard Practice E1527-13 is to identify recognized environmental conditions (RECs) in connection with the subject property. A REC is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. Conditions that are determined to be de minimis, which do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies, are not recognized environmental conditions.

The standard further identifies historical RECs and controlled RECs. An historical REC (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. A controlled REC (CREC) is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

1.2. SITE DESCRIPTION

The subject property is a rectangular, 10.3-acre parcel, located to the north of Manila Road in a rural/agricultural area of the city of Lathrop, California. The property is currently vacant rural grassland with no buildings or structures on the property except for an abandoned water well located on the southeast corner.

Further property location descriptions, characteristics, improvements and site vicinity characteristics are discussed below.

1.2.1. Location and Legal Description

The subject property location can be identified as the following:

Site Address(es)	169 Manila Road, Lathrop, California
Assessor's Parcel Number(s) (APN)	191-250-060-000
Property Owner	Bacay Antonio A Tr Etal
Land Use Type	Agricultural
Zoning	
Legal Description	
Size of Property	10.3 Acres

The parcel map and owner information were obtained from the County Assessor's Office or independent parcel search company. Copies of the parcel map and the owner information are provided in Appendix B.

1.2.2. Site and Vicinity General Characteristics

The subject property is located within a agricultural area of the City of Lathrop, San Joaquin County, California. Figure 1 shows the setting of the subject property (7.5 Minute United States Geological Survey [USGS] Topographic Series, Lathrop Quadrangle, California). Photographs of the subject property are provided in Appendix A.

1.2.3. Current Use of Property

The property is currently vacant rural grassland with no buildings or structures on the property except for an abandoned water well located on the southeast corner.

1.2.4. Proposed Use of Property

It is AGI’s understanding that the proposed future property use is single-family residential.

1.2.5. Property Utilities

There are no known historic utilities serving the subject property except for power lines that run parallel with the west and east borders of the property.

1.3. DETAILED SCOPE-OF-SERVICES

Except where identified in Section 8.1., the scope of work for this Phase I conforms to ASTM Standard Practice E1527-13 and the USEPA AAI (40 CFR Part 312). Any additional User requested scope of services are discussed in Section 7.0.

1.4. SIGNIFICANT ASSUMPTIONS

Our professional services were performed using that degree of care and skill ordinarily exercised by environmental consultants practicing in this or similar fields. Findings were based mainly upon examination of historical records, maps, aerial photographs and government agency lists, on a site reconnaissance visit, and on information obtained during personal interviews with persons of long term familiarity with the subject property as specified in ASTM E1527-13 and the USEPA AAI. Hazardous waste site lists presented in this report represents only a search of specific government records as listed below. AGI is aware additional government records may exist. It should be noted that government agencies often do not list all sites with environmental contamination or that the list could be inaccurate and/or incomplete.

Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites, are assumed based on geologic interpretations from available sources. AGI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.5. LIMITATIONS AND EXCEPTIONS

Property conditions, as well as local, state, tribal and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AGI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

Considerations identified as beyond the scope of an ASTM Phase I that may affect business environmental risks at a property include the following: asbestos-containing materials (ACMs); biological agents; cultural and historic resources; ecological resources; endangered species; health and safety; indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment; industrial hygiene; lead-based paint (LBP); lead in drinking water; mold; radon; regulatory compliance; and wetlands. These environmental issues may warrant assessment based on the type of property or transaction, however, they are considered non-scope issues under ASTM Practice E1527-13. Any addition of non-scope items must be agreed upon between the user and AGI prior to initiation of the Phase I.

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of investigation into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings,

conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property visit.

1.6. SPECIAL TERMS AND CONDITIONS

There were no special terms or conditions, agreed upon by the environmental professional, beyond the initial agreed upon scope of work, used in preparation of this report.

1.7. USER RELIANCE

Conclusions and recommendations in this report are based on findings regarding historical use of the site, and on features noted during the site reconnaissance. The absence of any potential gross contamination sources, historic or present, does not necessarily imply that the site is free of any contamination. This report only represents a 'due diligence' effort as to the current environmental status of the site. No other warranty, expressed or implied, is made as to the professional recommendations contained in this report.

2.0. USER PROVIDED INFORMATION

According to the ASTM Standard E1527-13 and the USEPA AAI, in order to qualify for one of the Landowner Liability Protections (LLPs) to CERCLA liability offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, the client (user) must provide to the environmental professional the following information (if available) in relation to the subject property:

Title Records	A review of Title Records was not requested by the user.
Environmental Liens or Activity and Use Limitations	An environmental lien or AUL's (activity and usage limitations) search was not requested by the user.
Specialized Knowledge	AGI was not provided any specialized knowledge by the user and does have not any specialized knowledge of this property outside of what is contained in this report. The property ownership and tenants as well as all individuals who were interviewed as part of this investigation, have not reported any specialized knowledge of this property outside of what is contained in this report.
Commonly Known or Reasonably Ascertainable Information	The user provided no commonly known or reasonably ascertainable information available within the local community about the subject property that is material to recognized environmental conditions in connection with the property.
Valuation Reduction for Environmental Issues	No property valuation reduction related to environmental issues or concerns was reported by the user.
Owner, Property Manager, and Occupant Information	No written or verbal communication with the property owner, manager and/or occupant revealed any information which suggested that there are currently or historically any recognized environmental conditions associated with the subject property not noted in this assessment.
Reason for Performing Phase I	Potential property transaction
Other	No modifications to the ASTM E1527-13 standard scope-of-services were requested by the user for special circumstances that might be encountered at the subject property. Any additional user requested scope of services are discussed in Section 7.0.

Failure to provide the above information could result in a determination that 'all appropriate inquiries' are not complete. Additional items should be collected, if available, and provided to AGI.

3.0. RECORDS REVIEW

The purpose of obtaining and reviewing subject property and site vicinity historical, physical setting and regulatory records is to help identify *recognized environmental conditions* in connection with the subject property.

3.1. HISTORICAL USE INFORMATION

The objective of consulting historical sources for a Phase I is to develop a history of previous uses of the property and surrounding area to help identify the likelihood of past uses having led to recognized environmental conditions with respect to the property. All obvious uses shall be identified from the present to the property's first obvious developed use, or back to 1940, whichever is earlier. Review of standard sources at less than five year intervals is not required.

3.1.1. Historical Use Information on Subject Property

Subject property history was researched by reviewing historical Sanborn Fire Insurance Maps (no coverage), aerial photographs, topographic maps, telephone directory information, the San Joaquin Building Department records, and the San Joaquin County Assessor's Office records.

Based on a review of historical documents, the property was vacant until 1957 when a single family residence was built on the southwest corner of the property. The residence was demolished in 1975. The property is currently vacant rural grassland.

In summary, review of the historical documents revealed no features on the subject property of environmental concern. Representative historical records are provided within Appendix B.

3.1.1.1. Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas but are now utilized as a valuable source of historical and environmental risk information. EDR owns the largest collection of Sanborn Fire Insurance Maps. AGI requested EDR to provide any Sanborn Fire Insurance Maps that might cover the subject property. Sanborn map coverage was not available for the subject property.

3.1.1.2. Aerial Photographs

AGI reviewed aerial photographs of the subject property and surrounding area that were provided by EDR as well reviewed online (Google Earth) for the years1937, 1940, 1957, 1963, 1968, 1975, 1982, 1993, 2006, 2009, 2012 and 2016. The following is a summary of our review of the aerial photographs:

Year(s)	Subject Property	Surrounding Area
1937, 1940	The subject property is vacant agricultural land. No structures occupy the property.	The surrounding area is also vacant rural land. To the east is agricultural land. To the south Manila Road is present.
1957, 1963, 1975	A single family residence has been built on the southwest corner of the subject property. The remainder of the property is agricultural land.	The surrounding adjacent properties are also agricultural land. Few single family residences are present along Manila Road to the southwest.
1982, 1993, 2006, 2009, 2012, 2016	The single family residence has been removed from the property. The subject property is now vacant rural grassland.	The surrounding adjacent properties are also vacant rural grasslands.

A review of historical aerial photographs did not reveal any items of environmental concern in connection with the subject property, except for the use as agricultural land from 1937 to 1975.

3.1.1.3. Historical Topographic Maps

AGI reviewed historical topographic maps of the subject property and surrounding area that were supplied by EDR for the years 1915 1952, 1968, 1976, 1987, 1994, 1996 and 2012. The following is a summary of our review of the topographic maps:

Year(s)	Subject Property	Surrounding Area
1915	The subject property is vacant land with no buildings or structures on the property.	The surrounding adjacent properties are also vacant undeveloped land. Manila Road is a dirt road to the south.
1952	The subject property remains vacant land. A water well is located centrally on the west boundary of the property.	The surrounding area remains vacant land. To the southwest corner of the property, two small residences have been built.
1968, 1976	A building is depicted on the southwest corner of the property. The remainder of the property is mapped as vacant land.	The surrounding adjacent properties remain the same to previous years as vacant land.
1987, 1994, 1996, 2012	The single family residence on the southwest corner is not depicted. The water well in the center west boundary remains there. The rest of the subject property remains vacant undeveloped land.	The surrounding adjacent properties remain the same to previous years as vacant land.

A review of historical topographic maps did not reveal any items of environmental concern in connection with the subject property.

3.1.1.4. Street Directories

AGI requested that EDR provide a review of city and street directories to determine the occupancy history of the property for the years 1974 and 1971. The following is a summary of the city directory search:

Year(s)	Directory Listing Summary
1974	Aquino Caridad
1971	Torraoo Antonio

A review of historical telephone directory listings of the subject property address did not reveal any items of environmental concern.

3.1.1.5. Building Department Records

A review of San Joaquin County records is summarized in the following table:

Address	Year(s)	Summary
169 Manila Road	1978	Permit for a new water well for irrigation purposes.
169 Manila Road	1978	Permit for turbine pump for new well.

A review of historical public building of the subject property address did not reveal any items of environmental concern.

3.1.1.6. Assessor's Records

San Joaquin County Assessor's records were not review in time for the publication date of this report.

3.1.1.7. Previous Phase I and II Environmental Site Assessments

No previous Phase I or II Environmental Site Assessments were provided to AGI by the user and/or property owner during the course of this Phase I.

3.1.2. Historical Use Information on Adjoining Properties

Historical use of immediately adjoining properties was vacant rural and agricultural land.

Historical uses of adjoining properties do not appear to be of environmental concern to the subject property.

3.2. PHYSICAL SETTING

Geology	The subject property is situated within the Great Valley Geomorphic Province of California, an elongate, northwest trending structural trough running 400 miles through Central California. The Great Valley is bound to the north by the Klamath Mountains, the south by the Tehachapi Mountains, the east by the Sierra Nevada Mountains, and the west by the Coast Ranges. Approximately 32,000 feet of marine and continental sediment have been deposited almost continuously since the Jurassic. The northern and southern regions of the Great Valley are designated the Sacramento and San Joaquin Valleys, respectively. The subject property is located within the San Joaquin Valley.
Hydrology	The subject property and surrounding area lie within the San Joaquin Valley Groundwater Basin, Eastern San Joaquin Subbasin (5-22.01). The subbasin is bound on the south, southwest and west by the Modesto, Delta-Mendota, and Tracy Subbasins, respectively, and on the northwest and north by the Solano, South American, and Cosumnes Subbasins. The Solano and South American are subbasins of the Sacramento Valley Groundwater Basin. The Eastern San Joaquin Subbasin is drained by the San Joaquin River and several of its major tributaries namely, the Stanislaus, and Calaveras, and Mokelumne Rivers. The San Joaquin River flows northward into the Sacramento and San Joaquin Delta and discharged into the San Francisco Bay. Annual precipitation within the subbasin ranges from about 11 inches in the southwest to about 25 inches in the northeast. Groundwater information collected from the State of California Geotracker database

Hydrology	at a site located approximately 2,000-feet northeast of the property indicates that groundwater is found at an approximate depth between 3 and 12 feet below surface grade and flows to the northwest.
Topography	The property is located at an elevation of approximately 15 feet above mean sea level (MSL), in an area of low topographic relief. Regional slope of the area is toward the general west.
Surface Soils	EDR provides a report listing dominant soil composition in the general area of the subject property based on information from the United States Department of Agriculture's Soil Conservation Service STATSGO (State Soil Geographic Database) soil maps. Soil surface texture at the subject property consists of soil identified as Manteca, a fine sandy loam in the Class C Hydrogeologic Group which includes slow infiltration rates. Corrosion potential of this soil for uncoated steel is high.
Surface Water Features	There are no surface water features on the subject property. The nearest surface water feature in the vicinity of the subject property is the San Joaquin River, located approximately 1-mile west of the subject property.
Flood Zone	The EDR database report shows that the subject property is not located within either a Special Flood Zone Hazard Area (1%) or a 0.2% Annual Chance Flood Zone. This data, available in select counties across the country, was obtained by EDR from the Federal Emergency Management Agency (FEMA) which has maps depicting FEMA-defined flood zones.
Wetlands	The EDR database report shows that the subject property is not located within the National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR from the U.S. Fish and Wildlife Service.

3.3. STANDARD ENVIRONMENTAL RECORD SOURCES

A computer search of federal, state and regional regulatory agency databases was performed by Environmental Data Resources Inc. (EDR), a data retrieval company, to identify and locate properties in areas of concern that have been reported as sites known or suspected to contain underground storage tanks, or to have been the scene of hazardous materials spills. Additionally, sites permitted to manufacture, utilize, generate, store, treat or dispose of hazardous materials and/or hazardous wastes are identified and located. A list and description of databases investigated, in compliance with ASTM E1527-13 and USEPA AAI, is included in EDR Report provided in Appendix C.

3.3.1. SUBJECT PROPERTY DATABASE SEARCH

The property address 169 Manila Road, Lathrop, California, was not listed on any governmental databases within the EDR Report.

3.3.2. SITE VICINITY DATABASE SEARCH

Sites with recognized environmental conditions surrounding the subject property are typically of concern to the subject property when they are located in an up-gradient direction from the property with respect to the ground water flow direction. Typically, groundwater would represent the migration medium for contaminants over significant distances. Sites located in equi-gradient or down-gradient directions from the subject property are less likely to impact the subject property.

AGI retained EDR to provide current regulatory database information compiled by a variety of federal and state regulatory agencies. A copy of the complete database is included in Appendix C. The following information was obtained:

Regulatory Agency Database	Appropriate Minimum Search Distance (AMSD)	Number of Sites within AMSD
National Priority List	1	1
Proposed National Priority List Sites	1	0
Federal Superfund Liens	1	0
National Priority List Deletions	1	0
Corrective Action Report	1	1
RCRA - Treatment, Storage and Disposal	0.5	0
RCRA - Large Quantity Generators	0.25	1
RCRA - Small Quantity Generators	0.25	0
Engineering Controls Sites List	0.5	0
Emergency Response Notification System	0.001	0
Land Use Control Information System	0.5	0
Superfund Enterprise Management System	0.5	0
Institutional Controls Sites List	0.5	0
Superfund Enterprise Management System Archive	0.5	0
Federal Facility Site Information listing	0.5	0
RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)	0.25	0
Underground Storage Tank Listing	0.25	0
Solid Waste Information System	0.5	0
Leaking Underground Fuel Tank Report (GEOTRACKER)	0.5	1
Active UST Facilities	0.25	2
Aboveground Petroleum Storage Tank Facilities	0.25	1
Voluntary Cleanup Program Properties	0.5	0
Considered Brownfieds Sites Listing	0.5	0
Environmental Case Listing	0.5	0
EnviroStor Database	1	5
HIST LUST - Fuel Leak Site Activity Report	0.5	0
Contaminated Sites	0.5	0
State Response Sites	1	0
Toxic Site Clean-Up List	0.5	0
Statewide SLIC Cases (GEOTRACKER)	0.5	0
Leaking Underground Storage Tanks on Indian Land	0.5	0
Underground Storage Tanks on Indian Land	0.25	0
Voluntary Cleanup Priority Listing	0.5	0

AGI's review of the referenced databases also considered the potential or likelihood of contamination from adjoining and nearby sites. To evaluate which of the adjoining and nearby sites identified in the regulatory database report present an environmental risk to the subject property, AGI considered the following:

- The type of database on which the site is identified;
- The topographic position of the identified site relative to the subject property;

- The direction and distance of the identified site from the subject property;
- Local soil conditions in the subject property area;
- The known or inferred groundwater flow direction in the subject property area;
- The status of the respective regulatory agency-required investigation(s) of the identified site (if any); and
- Surface and subsurface obstructions and diversions (e.g., buildings, roads, sewer systems, utility service lines, rivers, lakes and ditches located between the identified site and the subject property.

Only those sites that are judged to present a potential environmental risk to the subject property and/or warrant additional clarification are further evaluated. Using the referenced criteria and based on a review of readily available information contained within the regulatory database report, AGI did not identify adjacent or nearby sites (e.g. within ¼-mile radius) listed on the regulatory database report that were judged to present a potential environmental risk to the subject property with the exception of the following:

Site	Distance	Direction	Database(s) & Summary	Environmental Concern
Beneto Inc.	1838 feet	Northeast, up gradient.	LUST, CORTESE, CERS: Leaking underground storage tank with diesel. Case closed in 2007 and issued a closure no further action letter.	None based on distance and regulatory status.
Sharpe Army Depot	3340 feet	East, up gradient	NPL, SEMS, CORRACTS, RCRA, US ENG CONTROLS, US INST CONTOLS, HIST UST, RCRA NON-GEN, ROD: The site operated as an Army Depot in the 1980's. US Army maintenance facility produced waste products that affected groundwater conditions.	None based on distance and regulatory status.

3.4. ADDITIONAL ENVIRONMENTAL AGENCY RECORD SOURCES

In addition to the EDR computer search of federal, state and regional regulatory agency databases, AGI contacted appropriate regulatory agencies to review records regarding the property and surrounding sites identified as having recognized environmental conditions that have the potential to impact the subject property based on ground water flow direction, distance from the subject property and nature of the releases causing the environmental condition.

Additional agency searches include the following:

- San Joaquin County Environmental Health Department (SJCEHD) and the Central Valley Regional Water Quality Control Board (Regional Board) maintain records of industrial violations for this area and are the lead agencies for the enforcement of the State Underground Storage Tank and Hazardous Waste Laws for San Joaquin County. AGI requested to review any files that were available.
- The Regional Board also maintains and online computer database, GeoTracker, that provides listings of closed and active sites related to unauthorized releases

of hydrocarbons as well as solvents, metals, and other materials. For listed sites, online reports are commonly available. AGI reviewed the GeoTracker database for information that may be available for the subject property or surrounding sites.

- The California Department of Toxic Substances Control (DTSC) is the State of California agency responsible for oversight of hazardous waste regulations, cleanup of existing contamination, pollution prevention and reduction in hazardous waste and toxic materials and identification of potential new pollutants. The DTSC maintains the EnviroStor Data Management System (ENVIROSTOR) which allows for the search for information on investigation, cleanup, permitting and/or corrective actions that are planned, being conducted or have been completed under DTSC oversight. AGI reviewed the ENVIROSTOR database for any information that may be available.

- The United States Environmental Protection Agency (USEPA) provides an online computer database, ENVIROFACTS, providing lists of sites listed on multiple USEPA databases. AGI reviewed the ENVIROFACTS database for any information that may be available.

- The San Joaquin Valley Air Pollution Control District (SJVAPCD) is the air district for the counties of San Joaquin, Stanislaus, Merced, Fresno, Kings, Tulare and Lathrop. AGI contacted the SJVAPCD for any information available.

- The Geologic Energy Management Division's (CalGEM) online mapping application presents California's oil and gas industry information from the geographic perspective. AGI reviewed the CalGEM Well Finder database for information that may be available for the subject property or surrounding sites.

3.4.1. Additional Subject Property Record Sources

The subject property address was searched on the following record sources:

SOURCE	SUMMARY
Regional Board & GeoTracker database	Property address was not listed on the GeoTracker database and did not have any records on-file with the Regional Board.
DTSC & ENVIROSTOR database	Property address was not listed on the ENVIROSTOR database and did not have any records on-file with the DTSC.
USEPA ENVIROFACTS	Property address was not listed on the ENVIROFACTs database.
SJAVPQCD	Property address was not identified as having records on-file with the San Joaquin Valley Air Pollution Quality Control District (SJVAPQCD).
SCEHD	Property address was not identified as having records on-file with the San Joaquin County Environmental Health Department SCEHD.
CalGEM	According to the CalGEM Well Finder website, no oil and/or gas wells are located in the vicinity of the subject property.

3.4.2. Additional Site Vicinity Record Sources

The SJCEHD and Regional Board maintain records for, and are responsible for, enforcement of state UST and hazardous waste laws. AGI commonly reviews files for up-gradient sites under active environmental regulation to ascertain the current site status and its potential to impact the subject property. No sites, under active or past environmental regulation, were identified by the database search within the required search radius of potential concern to the property.

3.5. PROVIDED SUBJECT PROPERTY RECORDS

No records were provided to AGI by the user and/or property owner during the course of this Phase I.

3.6. VOLATILE ORGANIC COMPOUND VAPOR ENCROACHMENT

The encroachment of hydrocarbon and volatile organic compound (VOC) vapors into soil pore space occurs when organic chemicals migrate from contaminated groundwater or soil into the airspace between soil particles. Some typical organics involved are petroleum based or chlorinated solvents (e.g, BTEX and dry cleaning chemicals). They may have leaked into the groundwater and/or soil from underground storage tanks, or buried waste, or from disposal in septic systems.

In compliance with ASTM Standard E2600-15 (Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions), AGI evaluated the potential for a Vapor Encroachment Condition (VEC) at the subject property. Based on a VEC screening, it was determined that 'a VEC does not exist' at the property. A copy of the AGI-generated Tier 1 VEC screening form is provided within Appendix E.

4.0. SITE RECONNAISSANCE

A subject property site reconnaissance was conducted by an AGI representative on 19 April 2021. At the time of the site visit the weather was clear and warm. Primary features of the property are shown in a site plan provided in Figure 2. Photographs of selected features of the subject site are included in Appendix A.

4.1. METHODOLOGY AND LIMITING CONDITIONS

The property was fully accessible during the site reconnaissance. No limiting conditions were noted.

4.2. GENERAL SITE SETTING

The following is a description of the primary features of the subject property observed at the time of the site visit:

- The subject property is located approximately 775 feet northwest of the intersection of Manila Road and Matheny Road, in a rural area near Lathrop, California. The subject property is comprised of one parcel (APN 191-250-060) totaling 10.3 acres.
- The subject property is undeveloped and entirely covered by grass vegetation.
- An abandoned water well was observed in the southeast corner of subject property.

The following is a description of the property improvements:

Structures	No building structures were observed on the subject property.
Adjoining / Access / Egress Roads	There are no drive-way entrances to the subject property. Access to the subject property is through a dirt access road located on the north side of the subject property.
Surface Types	All areas of the subject property were covered by grass vegetation.
Additional Features	An abandoned water well was located in the southeast corner of the subject property
Surface Water	No surface water features are located on the subject property.

At the time of the site reconnaissance, current uses of adjacent properties included the following:

North	Dirt access road followed by a tree orchard.
South	Manila Road followed by a tree orchard.
East	Grass field or vacant dirt field followed by rural residential building structures.
West	A grass field is located west of the subject property. Rural residential buildings are located toward the southwest.

Current uses of the adjoining properties do not appear to be of potential environmental concern to the subject property.

4.3. EXTERIOR AND INTERIOR OBSERVATIONS

The following was observed at the time of the property reconnaissance:

OBSERVED	CONDITION OBSERVED ON/AT SUBJECT PROPERTY
No	Pits, ponds or lagoons with respect to waste treatment or disposal
No	Stained soil or pavement, patched pavement
No	Stressed vegetation (from causes other than insufficient water)
No	Fill dirt from unknown source, or contaminated source
Yes	Solid waste (mounds or depressions suggesting waste disposal) *At least one wood debris pile, abandoned wood crates, and tires were observed in west section of subject property.*
No	Waste water / storm water discharged into a drain, ditch or stream
Yes	Wells (abandoned, irrigation, domestic, monitoring or oil and gas) - One abandoned water well was observed at southeast corner of subject property.
No	Dry wells
No	Septic systems or cesspools
No	Movement of hazardous materials to adjacent properties
No	Hazardous substances and/or petroleum products
No	Above-ground storage tanks (ASTs) for storage of petroleum products and/or hazardous substances
No	Underground storage tanks (USTs) for storage of petroleum products and/or hazardous substances
No	Strong, pungent or noxious odors
No	Pools of liquid (other than water)
Yes	55-gallon drum or large sack storage *One empty, abandoned 55-gallon drum was observed in west section of subject property*.
No	Unidentified substance containers
No	Stains and/or corrosion on floors, walls or ceiling (except water)
No	Drains and sumps
No	Oil-water separator/clarifier
No	Electrical or hydraulic equipment known to contain PCBs
No	Obvious signs of possible ACMs
No	Obvious signs of mold
No	Other areas of environmental concern

5.0. MATERIAL STORAGE

Except for one empty 55-gallon drum, no current or historic containers, storage vessels, and containment systems (e.g., clarifiers, oil/water separators, vaults, frac ponds, tanks, drums, storage lockers, silos) of 55 gallons or more for individual containers, or 100 gallons in aggregate for smaller containers, were observed on the subject property or have been historically utilized on the property.

6.0. INTERVIEWS

No Interviews were performed during the course of this Phase I.

Interviewee	Interview Summary
Property Owner	The property owner was not interviewed during the course of this Phase 1.
Site Manager	The property site manager was not interviewed during the course of this Phase I.
Property Occupant(s)	Property occupants were not interviewed during the course of this Phase I.
Local Government Officials	With the exception of file review requests, no local government officials were interviewed during the course of this Phase I.
Others	No additional interviews were performed during the course of this Phase I.

ASTM-compliant interview/questionnaire documentation is provided as Appendix D.

7.0. BUSINESS ENVIRONMENTAL RISKS - NON-ASTM SERVICES

Additional environmental considerations beyond the scope of the standard ASTM practice that have the potential to pose business environmental risks are discussed below.

7.1. MOLD

Molds are part of the natural environment. Outdoors, molds play a part in nature by breaking down dead organic matter such as fallen leaves and dead trees, but indoors, mold growth should be avoided. Molds reproduce by means of tiny spores; the spores are invisible to the naked eye and float through outdoor and indoor air. Mold may begin growing indoors when mold spores land on surfaces that are wet. There are many types of mold, and none of them will grow without water or moisture.

Molds are usually not a problem indoors, unless mold spores land on a wet or damp spot and begin growing. Molds have the potential to cause health problems. Molds produce allergens (substances that can cause allergic reactions), irritants, and in some cases, potentially toxic substances (mycotoxins).

At the time of the property reconnaissance, no structures or buildings were present on the property making the presence of mold unlikely.

7.2. ASBESTOS CONTAINING BUILDING MATERIALS

Asbestos is a mineral fiber that has been used commonly in a variety of building construction materials for insulation and as a fire-retardant. Because of its fiber strength and heat resistant properties, asbestos has been used for a wide range of manufactured goods, mostly in building materials (roofing shingles, ceiling and floor tiles, paper products, and asbestos cement products), friction products (automobile

clutch, brake, and transmission parts), heat-resistant fabrics, packaging, gaskets, and coatings.

Prior to the late 1970s, building products and insulation materials commonly contained asbestos. In 1989, the USEPA banned all new uses of asbestos; however, uses developed before 1989 are still allowed. When asbestos-containing materials are damaged or disturbed by repair, remodeling or demolition activities, microscopic fibers become airborne and can be inhaled into the lungs, where they can cause significant health problems.

At the time of the property reconnaissance, no structures or buildings were present on the property making the presence of asbestos unlikely.

7.3. LEAD-BASED PAINT

Lead is a toxic metal that was used for many years in products found in and around our homes. Lead-based paint (LBP) was used extensively in buildings constructed before 1950. In 1978, LBP was banned by the federal government. Lead may cause a range of health defects, from behavioral problems and learning disabilities, to seizures and death.

At the time of the property reconnaissance, no structures or buildings were present on the property making the presence of LBP-coated materials unlikely.

7.4. RADON

Radon is a naturally occurring, colorless, odorless gas that is soluble in water. It is produced through the radioactive decay of uranium and radium, which is naturally present in soil and in minerals in bedrock. Radon is radioactive, which means that it breaks down or decays to form other elements. Radon concentrations generally differ among different rock types and can vary considerably within the same geologic formation. Radon moves from its source in rocks and soils through voids and fractures. It can enter buildings as a gas through foundation cracks or it can dissolve in ground water and be carried to buildings through the use of water-supply wells. Buildings with basements and concrete slab foundations are more susceptible to elevated levels of indoor radon gas. The inhalation of radon gas can cause damage to lung tissue.

A common unit of radioactivity measurement is picocuries per liter (pCi/L). The USEPA established the recommended safe radon level at 4 pCi/L. According to the USEPA, San Joaquin County, is in a low radon potential area (Zone 3), defined as having a ‘predicted average indoor radon screening level of less than 2 pCi/L'.

7.5. WETLANDS

As reported in Section 3.2., according to the EDR Report (Appendix C) the subject property is not located within a National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR from the U.S. Fish and Wildlife Service.

7.6. REGULATORY COMPLIANCE

AGI searched the subject property address, 169 Manila Road, Lathrop, California, on local, state and federal databases. No records were found regarding any outstanding regulatory permitting or requirements/directives in connection with the property.

8.0. EVALUATION

Any deviations from the ASTM Standard Practice 1527E-13 and USEPA AAI are presented below, along with the findings, conclusions, and opinions identified during the course of this Phase I.

8.1. DATA GAPS AND LIMITATIONS

A data gap occurs when a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance, and interviews. The following data gaps and/or limitations were identified during the course of this Phase I, which may deviate from the ASTM standard practice:

- The largest data gap in research was 22 years, between 1915 and 1937, with the earliest researched information being a Topographic Map dated in 1915. Data gaps generally do not exceed six years between 1940 through the present, except between 1940 and 1952. AGI does not believe any gaps in the data reviewed have affected the ability to identify recognized environmental concerns.
- Owner-privileged (non-public) San Joaquin County Assessor's records were not reviewed during the course of this Phase I. The property owner's permission could not be obtained within the time frame of this assessment. AGI does not consider this data gap significant.

8.2. FINDINGS

Based on the standards set by ASTM Practice E1527-13, the following findings are differentiated below as Business Environmental Risk (including the presence of asbestos-containing materials, lead-based paint, mold or moisture conditions, or non-hazardous regulated materials may constitute a Business Environmental Risk), *de minimis* conditions unlikely to be subject to government enforcement, HRECs, CRECs and RECs, as defined in Section 1.1. of this report.

8.2.1. Business Environmental Risk

This assessment has revealed no evidence of potential Business Environmental Risks in connection with the subject property with the exception of the abandoned water well. If the well will not be rehabilitated for future use, the well should be destroyed under permit.

8.2.2. De Minimis Conditions

This assessment revealed no evidence of potential or *de minimis* conditions in connection with the subject property.

8.2.3. Historical Recognized Environmental Conditions

This assessment has revealed no evidence of HRECs in connection with the subject property.

8.2.4. Controlled Recognized Environmental Conditions

This assessment has revealed no evidence of CRECs in connection with the subject property.

8.2.5. Recognized Environmental Conditions

This assessment has revealed no evidence of RECs in connection with the subject property.

8.2.6 Other Potential Environmental Issues

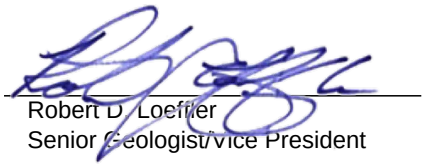
This assessment has revealed no evidence of other potential environmental issues in connection with the subject property.

9.0. CONCLUSIONS AND OPINION

AGI has performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-13, US-EPA AAI for the property located at 169 Manila Road, Lathrop, California. Any exceptions to, or deletions from, this practice or scope of work are described in Section 8.1. of this report or presented as non-ASTM services in Section 7.0. It is the opinion of the environmental professionals that the findings and conclusions presented in this report are reasonable and prudent, given the evidence as presented. This assessment has revealed no evidence of RECs in connection with the property. AGI has no recommendations for additional environmental investigations of the subject property.

10.0. SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR § 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.



Robert D. Loeffler
Senior Geologist/Vice President

11.0. QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Qualifications of the environmental professionals involved in the preparation of this Phase I are included in Appendix F.

Photographs of the Subject Property

1 : Photograph of subject property (SP) at a distance of approximately 300 feet from Manila Road. View is looking toward the north and depicts the southwest section of SP in the background.

2 : Photograph of south section of subject property (SP). View is looking toward the east along the southern property boundary and depicts a grass field on SP and vacant field immediately south of SP.

3 : Photograph of southwest corner section of subject property (SP). View is looking toward the north along the western property boundary and depicts electric utility poles and a grass field on SP

4 : Photograph of west section of subject property (SP). View is looking toward the south and depicts abandoned wood crates partially filled with various debris.

5 : Photograph of west section of subject property (SP). View is looking toward the north and depicts abandoned, tires and wood crates partially filled with various debris.

6 : Photograph of west section of subject property (SP). View is looking toward the east and depicts pile of abandoned irrigation tubing and plastic sheeting.

7 : Photograph of west section of subject property (SP). View is looking toward the north and depicts abandoned and empty 55 gallon drum.

8 : Photograph of northwest section of subject property (SP). View is looking toward the east along the north property boundary and depicts a dirt access road, followed by a tree orchard further north.

9 : Photograph of northwest section of subject property (SP). View is looking toward the southeast and depicts grass field on SP. Background depicts rural residential buildings further southeast.

10 : Photograph of northeast section of subject property (SP). View is looking toward the south along the east property boundary and depicts the east property fence line.

11 : Photograph of from east section of subject property (SP). View is looking toward the west and depicts a grass field on SP. Background depicts agricultural fields and tree orchards further west-northwest.

12 : Photograph of from east section of subject property (SP). View is looking toward the east and depicts a grass field on the adjacent property to east, followed by rural residential buildings. Highway 5 is seen further east.

13 : Photograph of from east section of subject property (SP). View is looking toward the east and depicts a vacant dirt field on the adjacent property to east, followed by rural residential buildings. Highway 5 is seen further east

14 : Photograph of abandoned water well located in southeast corner of subject property.

15 : Photograph of abandoned water well located in southeast corner of subject property.

16 : Photograph of electric service to abandoned water well located in southeast corner of subject property.

17 : Photograph of abandoned water well and electric service meter located in southeast corner of subject property.

18 : Photograph of wood debris pile located in west section of subject property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 9 of the attached EDR Radius Map report:

Site	Database(s)	EPA ID
GURDIP KELLY 11293 S MANTHEY RD LATHROP, CA 95330	HAZNET GEPAID: CAC002806664 HWTS	N/A

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---------- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---------- Federal Facility Site Information listing

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE ---------- Superfund Enterprise Management System Archive

Lists of Federal RCRA generators

RCRA-VSQG ---------- RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System

Federal ERNS list

ERNS ---------- Emergency Response Notification System

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE ---------- State Response Sites

EXECUTIVE SUMMARY

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF ---------- Solid Waste Information System

Lists of state and tribal leaking storage tanks

INDIAN LUST ---------- Leaking Underground Storage Tanks on Indian Land
CPS-SLIC ---------- Statewide SLIC Cases

Lists of state and tribal registered storage tanks

FEMA UST ---------- Underground Storage Tank Listing
INDIAN UST ---------- Underground Storage Tanks on Indian Land

Lists of state and tribal voluntary cleanup sites

INDIAN VCP ---------- Voluntary Cleanup Priority Listing
VCP ---------- Voluntary Cleanup Program Properties

Lists of state and tribal brownfield sites

BROWNFIELDS ---------- Considered Brownfieds Sites Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS ---------- A Listing of Brownfields Sites

Local Lists of Landfill / Solid Waste Disposal Sites

WMUDS/SWAT ---------- Waste Management Unit Database
SWRCY ---------- Recycler Database
HAULERS ---------- Registered Waste Tire Haulers Listing
INDIAN ODI ---------- Report on the Status of Open Dumps on Indian Lands
DEBRIS REGION 9 ---------- Torres Martinez Reservation Illegal Dump Site Locations
ODI ---------- Open Dump Inventory
IHS OPEN DUMPS ---------- Open Dumps on Indian Land

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL ---------- Delisted National Clandestine Laboratory Register
HIST Cal-Sites ---------- Historical Calsites Database
SCH ---------- School Property Evaluation Program
CDL ---------- Clandestine Drug Labs
Toxic Pits ---------- Toxic Pits Cleanup Act Sites
US CDL ---------- National Clandestine Laboratory Register

Local Lists of Registered Storage Tanks

CA FID UST ---------- Facility Inventory Database

Local Land Records

LIENS ---------- Environmental Liens Listing

LIENS 2 ---------- CERCLA Lien Information
DEED ---------- Deed Restriction Listing

Records of Emergency Release Reports

HMIRS ---------- Hazardous Materials Information Reporting System
CHMIRS ---------- California Hazardous Material Incident Report System
LDS ---------- Land Disposal Sites Listing
MCS ---------- Military Cleanup Sites Listing
SPILLS 90 ---------- SPILLS 90 data from FirstSearch

Other Ascertainable Records

FUDS ---------- Formerly Used Defense Sites
DOD ---------- Department of Defense Sites
SCRD DRYCLEANERS ---------- State Coalition for Remediation of Drycleaners Listing

RGA LUST - Recovered Government Archive Leaking Underground Storage Tank

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 01/25/2023 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
DEFENSE DISTRIBUTION	***700 E ROTH RD***	***E 1/4 - 1/2 (0.363 mi.)***	***0***	***10***
Cerclis ID:: 902792				
EPA Id: CA8210020832				

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 01/25/2023 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 11/21/2022 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
DEFENSE DISTRIBUTION EPA ID:: CA8210020832	***700 E ROTH RD***	***E 1/4 - 1/2 (0.363 mi.)***	***0***	***10***

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 11/21/2022 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
DEFENSE DISTRIBUTION EPA ID:: CA8210020832	***700 E ROTH RD***	***E 1/4 - 1/2 (0.363 mi.)***	***0***	***10***

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/21/2022 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
UPS - LATHROP HUB EPA ID:: CAR000265447	11800 HARLAN ROAD	SSE 1/8 - 1/4 (0.184 mi.)	C20	205

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/21/2022 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 10/27/2022 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

EPA ID:: CA8210020832				
EPA ID:: CA8210020832				

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 10/27/2022 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk

characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/24/2022 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 10 UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 2 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/21/2022 has revealed that there are 9 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 01/03/2022 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

Summary Details:

Conditions at proposal October 15, 1984): The Sharpe Army Depot covers 724 acres in a primarily rural area of San Joaquin County in north-central California, approximately 60 miles east of San Francisco, 2 miles east of the San Joaquin River, and l.5 miles northeast of Lathrop. The site is a former U.S. Army maintenance facility. Wastes produced on-site were disposed of in multiple locations, including the South Balloon Area, the Burning Pits Area, and the North Balloon Area. These areas cover about 0.5 square mile. The wastes disposed of at the depot include sludge containing phenols and polychlorinated hydrocarbons trans-dichloroethylene, trichloroethylene, carbon tetrachloride), and used paints and solvents. The total amounts and types are unknown. The wastes have contaminated both soil and ground water, but not surface water to date. All maintenance activities have ceased, and the waste areas are no longer used. The site is located in the large plain on the valley floor, which carries several aquifers, at least one artesian. Most of the surrounding land is used for agriculture, primarily for raising row crops. The depot is participating in the Installation RestorationProgram IRP), established in l978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. The Army has completed Phase I records search) of the IRP. Status July 22, 1987): Sharpe Army Depot is sampling on-base and off-base ground water under IRP Phase II-Stage 2 confirmatory sampling). The Army has installed a facility for treating contaminated ground water in the South Balloon Area. Within the boundaries of this Federal facility, there are areas subject to the Subtitle C

DEFENSE DISTRIBUTION DEPOT SAN JOAQUIN SHARPE SITE (Continued) **1000368504**

corrective action authorities of the Resource Conservation and Recovery Act RCRA). However, no such areas were included in scoring this specific site. Therefore, thisFederal facility site is being placed on the Federal section of the NPL under the NPL/RCRA policy announced on September 8, 1983 48 FR 40662).

Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D010
Waste Description: SELENIUM

Waste Code: D011
Waste Description: SILVER

Waste Code: D018
Waste Description: BENZENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: U151
Waste Description: MERCURY

Waste Code: U154

DEFENSE DISTRIBUTION DEPOT SAN JOAQUIN SHARPE SITE (Continued) **1000368504**

Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U159
Waste Description: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

Waste Code: U210
Waste Description: ETHENE, TETRACHLORO- (OR) TETRACHLOROETHYLENE

Violations:

Site ID:	391392
Site Name:	DIAMOND PET FOOD
Violation Date:	10-19-2020
Citation:	22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7
Violation Description:	Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior

DIAMOND PET FOOD (Continued) **S121772627**

to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

Violation Notes: Returned to compliance on 12/17/2020. OBSERVATION: The following empty container were observed in the hazardous waste storage area: -Three empty 55-gallon containers observed with no empty date. REGULATION GUIDANCE: Empty containers which previously held a hazardous material, including hazardous waste must be managed per Title 22 California Code of Regulations (CCR) section 66261.7. Refer to this section and California Department of Toxic Substances Control guidance for more information. CORRECTIVE ACTION: Immediately label all empty containers with the date they were emptied and manage within one year of that date. Manage the container per Title 22 CCR section 66261.7. Provide a corrective action statement and supporting documentation to the San Joaquin County Environmental Health Department (EHD) within 30 days.

Violation Date: 10-19-2020
Citation: HSC 6.5 25160.2 - California Health and Safety Code, Chapter 6.5, Section(s) 25160.2
Violation Description: Failure of a generator of hazardous waste that meets the conditions to be transported on a consolidated manifest to comply with one or more of the required consolidated manifesting procedures and retain copies of receipts for three years.
Violation Notes: Returned to compliance on 12/17/2020. OBSERVATION: The business operator could not provide hazardous waste disposal records for the past three years for the following hazardous waste: used oil, parts washer waste, waste antifreeze during the inspection. REGULATION GUIDANCE: The generator shall retain each consolidated manifest receipt for at least three years. This period of retention is extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the department or a certified unified program agency. CORRECTIVE ACTION: Provide a copy of disposal records for the past three years 10-19-2017 to 10-19-2020 for all hazardous waste including used oil, parts washer waste, and waste antifreeze. Provide these records and a corrective action statement to the EHD within 30 days.

Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 01/06/2021. OBSERVATION: The following was observed in the hazardous waste storage area: -Used oil stain observed on concrete floor of hazardous waste storage area. -One 55-gallon container with product oil observed with oil accumulating on lid of container. The following was observed in the maintenance shop: -Metal fines observed accumulating on and the floor of one metal grinding machine. -Metal fines observed accumulating on and the floor of two metal saw machines. -Metal fines observed accumulating on workbench for metal clamp machine. REGULATION GUIDANCE: A hazardous waste generator must maintain and operate its facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water, which could threaten human health or the environment. CORRECTIVE ACTION: Immediately, accumulating oil, oil stains and metal fines. Manage the waste according to Title 22

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-19-2020
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Complete and submit a copy of the Return to Compliance Certification form to the EHD with a statement documenting the corrective actions that have been or will be taken for each violation, and any supporting paperwork, by November 18th, 2020. To minimize person to person contact EHD is choosing to write the name of person receiving the report instead of having them sign. Starting September 1, 2018, all in-office CERS help will be provided at EHD hourly rate ($152). To schedule an appointment, please call (209) 468-3420. Documents provided during inspection: Return to compliance certification, minimum hazardous waste labeling requirements sheet. Waste streams found: used oil, waste antifreeze, used oil filters, metal fines, parts washer waste, soiled rags. Note: Total amount of hazardous waste generated in last calendar year was calculated from manifest found from Department of Toxic Substances Control website. The following minor violations were corrected on s

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-13-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Not reported
Eval Division: San Joaquin County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-09-2021
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Conducted a Hazardous Materials Business Plan (HMBP) inspection. There were no violations found during the inspection. The sales center, truck shop, oil room, paint booth, and body shop were all areas that have been inspected. To minimize person to person contact EHD is choosing to write the name of person receiving the report instead of having them sign. Starting September 1, 2018, all in-office CERS help will be provided at EHD hourly rate ($152). To schedule an appointment, please call (209) 468-3420.
Eval Division: San Joaquin County Environmental Health

Violation Date: 07-20-2021
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 08/19/2021. OBSERVATION: Designated facility signed and dated copies of Uniform Hazardous Waste Manifests (UHWM) were not found on-site. The missing manifests are: - 020116125JJK - 020116130JJK - 020116253JJK - 020116256JJK - 020116388JJK - 020116384JJK - 021591546JJK - 021591533JJK - 021591665JJK - 021591664JJK - 022026015JJK - 022026020JJK - 022026153JJK - 022026144JJK - 022026269JJK - 022026406JJK - 022973557JJK REGULATION GUIDANCE: A hazardous waste generator shall keep a copy of each manifest signed in accordance with section 66262.23(a) for three years or until the generator receives a signed copy from the designated facility which received the waste. This signed copy shall be retained

FLYING J TRAVEL CENTER LATHROP - 1017 (Continued) **S123519404**

as a record for at least three years from the date the waste was accepted by the initial transporter. The hazardous waste generator must submit a copy of the manifest to the California Department of Toxic Substances Control (DTSC) within 60 days if the destination facility signed mani

Violation Program: HW
Violation Source: CERS,

Site ID: 424229
Site Name: Flying J Travel Center Lathrop - 1017
Violation Date: 08-11-2022
Citation: HSC 6.7 25284 - California Health and Safety Code, Chapter 6.7, Section(s) 25284
Violation Description: Failure to obtain a valid permit to operate from the UPA including but not limited to unpaid permit fees.
Violation Notes: Returned to compliance on 09/16/2022. OBSERVATION: Fees for the annual permit to operate the UST system were paid late. The payment was received by the EHD on 2/17/2022. The facility operated without a permit from 1/1/2022 through 2/17/2022. REGULATION GUIDANCE: No person may own or operate an UST unless a permit for its operation has been issued by the local agency to the owner or operator of the UST system. CORRECTIVE ACTION: Ensure that all operating permits moving forward are obtained within the required time frame. Submit a corrective action statement to the EHD.
Violation Division: San Joaquin County Environmental Health

Citation: 40 CFR 1 262.34(d)(5)(i) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(i)
Violation Description: Failure to have at least one employee either on the premises or on call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for coordinating all emergency response measures.
Violation Notes: Returned to compliance on 11/23/2021. OBSERVATION: The emergency coordinator listed was Doug Humphries. Doug Humphries is no longer employed at this facility. REGULATION GUIDANCE: The emergency coordinator or his designee must respond to any emergencies that arise. The business operator must post the following information next to telephones or in areas directly involved in the generation and accumulation of hazardous waste: the name and emergency telephone number of the emergency coordinator, the location of fire extinguishers and spill control material, and the telephone number of the fire department unless the facility has a direct alarm. CORRECTIVE ACTION: Immediately post the required information at the facility. Provide a statement to the San Joaquin County Environmental Health Department that the correction is complete.

Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to include in the SPCC Plan: 1. A contact list and phone numbers for the facility response coordinator, National Response Center, cleanup contractors with an agreement for response, and all Federal, State, and local agencies who must be contacted in case of a discharge 2. Information and procedures that would enable a person reporting an oil discharge to relate all information as described in 40 CFR 112.7(a)(4), unless facility submitted a Facility Response Plan.
Violation Notes:	OBSERVATION: The Spill Prevention, Control, and Countermeasure (SPCC) Plan does not adequately discuss procedures for reporting a discharge. On Page 2-14 of the SPCC Plan an incorrect phone number was listed for the CUPA. No facility response coordinator was listed in the SPCC Plan. REGULATION GUIDANCE: The SPCC plan shall include: (vi) Contact list and phone numbers for the facility response coordinator, National Response Center, cleanup contractors with whom you have an agreement for response, and all appropriate Federal, State, and local agencies who must be contacted in case of a discharge as described in 112.1(b). (4) Unless you have submitted a response plan under 112.20, provide information and procedures in your Plan to enable a person reporting a discharge as described in 112.1(b) to relate information on the exact address or location and phone number of the facility; the date and time of the discharge, the type of material discharged; estimates of the total quanti

Violation Date:	07-20-2021
Citation:	40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description:	Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes:	Returned to compliance on 08/19/2021. OBSERVATION: - Tanks T3, T5, and T9 were observed leaking from the piping after the pump parallel to the ground. - Oily absorbent was observed on the ground around the diesel delivery pipes of the eastern tank farm. REGULATION GUIDANCE: A hazardous waste generator must maintain and operate its facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment. CORRECTIVE ACTION: Immediately fix the leak and cleanup diesel and oily absorbent. Manage the waste according to Title 22 California Code of Regulations for hazardous waste. Submit a statement and supporting documentation to the San Joaquin County Environmental Health Department describing the storage and final disposition of the cleaned up waste.

Violation Description:	Failure to discuss in the SPCC Plan procedures to test or inspect each aboveground container for integrity in accordance with industry standards: 1. On a regular schedule. 2. After material repairs are made. 3. By qualified personnel. 4. The frequency and type of testing and inspections based on container size, configuration, and design.
Violation Notes:	OBSERVATION: The Spill Prevention, Control, and Countermeasure (SPCC) Plan does not adequately discuss procedures to test or inspect each aboveground container for integrity in accordance with industry standards and does not address the following: The SP001 standard which was cited in the SPCC Plan requires annual inspections. The SPCC Plan reviewed on site only requires monthly inspections. REGULATION GUIDANCE: (c)(6) Test or inspect each aboveground container for integrity on a regular schedule and whenever you make material repairs. You must determine, in accordance with industry standards, the appropriate qualifications for personnel performing tests and inspections, the frequency and type of testing and inspections, which take into account container size, configuration, and design (such as containers that are: shop-built, field-erected, skid-mounted, elevated, equipped with a liner, double-walled, or partially buried). Examples of these integrity tests include, but are not l

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 09/17/2021. OBSERVATION: The mechanical flapper used as the overfill prevention system is not currently functional on the 87 UST. REGULATION GUIDANCE: All UST systems must be equipped with an approved, functional overfill prevention device at all times during delivery operations. CORRECTIVE ACTION: Immediately discontinue deposition of petroleum into this tank until the component is repaired or replaced by a properly licensed, trained, and certified contractor under permit and inspection of the EHD. If the failed component can t be replaced immediately, there is a possibility that the 87 UST system may be red tagged to prevent fuel inputs.

Violation Description:	Failure to address in the SPCC Plan disposal methods for recovered materials.
Violation Notes:	OBSERVATION: The Spill Prevention, Control, and Countermeasure (SPCC) Plan failed to address disposal methods for recovered materials. Page 2-11 of the SPCC Plan says, "Disposal of these materials will conform to the regulatory requirements for non-hazardous solid wastes found in 40 CFR 257 and 40 CFR 258." California Title 22 regulations were not addressed for the disposal of these wastes. REGULATION GUIDANCE: The SPCC plan shall include: (v) Methods of disposal of recovered materials in accordance with applicable legal requirements. CORRECTIVE ACTION: The SPCC Plan shall address all disposal methods for recovered materials. Ensure that the SPCC plan addresses disposal for recovered materials in accordance with applicable legal requirements, submit proof of correction to the EHD.

Site Name:	Flying J Travel Center Lathrop - 1017
Violation Date:	03-30-2018
Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to perform integrity and leak testing of buried piping at the time of installation, modification, construction, relocation, or replacement.
Violation Notes:	Returned to compliance on 04/27/2018. The site provided a volumetric line test report performed by company Jones Covey on 8/25/17. During the inspection, I called Jones Covey, and spoke to the tank tester, Isaac Garcia. Isaac informed me that the testing was only performed on the diesel aboveground storage tanks from the biodiesel shed to the dispensers. Line tightness testing will need to be performed on buried piping from the biodesel shed to all aboveground storage tanks. Buried piping shall be tested for integrity and leaks at the time of installation, modification, construction, relocation, or replacement. Immediately perform integrity and leak testing of this piping and ensure that piping is tested when required, or provide equivalence as allowed by CFR 112.7(a)(2).

Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to include in the SPCC Plan: 1. A contact list and phone numbers for the facility response coordinator, National Response Center, cleanup contractors with an agreement for response, and all Federal, State, and local agencies who must be contacted in case of a discharge 2. Information and procedures that would enable a person reporting an oil discharge to relate all information as described in 40 CFR 112.7(a)(4), unless facility submitted a Facility Response Plan.
Violation Notes:	Returned to compliance on 03/30/2018. The phone number for San Joaquin County Environmental Health Department (SJCEHD) listed in the site's SPCC plan is 209-468-3451; which is the phone number for the assistant director, Kasey Foley. The phone number should be 209-468-3420, which is for EHD front desk. The following shall be addressed in the Spill Prevention, Control, and Countermeasure (SPCC) Plan: - contact list and phone numbers for the facility response coordinator, National Response Center, cleanup contractors, and all appropriate Federal, State, and local agencies. Immediately amend the SPCC Plan to include all required information. During the inspection, site personnel changed the phone number. This was corrected on site.

Violation Description: Failure to keep water out of the secondary containment of UST systems installed on or after July 1, 2003 and before July 1, 2004, or on or after July 1, 2004.
Violation Notes: Returned to compliance on 06/08/2018. Water was found on the auto side in the 87-product submersible turbine pump (STP), 87-product fill, 91-product STP, 91-product fill, diesel STP, diesel fill and vent sumps; and on the truck side water was found in the T1 diesel tank south STP, T2 diesel tank north STP, and vent sumps. Liquid (possibly product) was found in under dispenser containments for dispensers 14A/15B, 15A/16B, 16A/17B and 17A/18B. Secondary containment shall be constructed to prevent any water intrusion into the system by precipitation, infiltration, or surface runoff. On the auto side of the facility, the service technicians removed approximately: one-quarter cup of water from the 87-product STP sump; two gallons of water from the 87-product fill sump; one cup of water from the 91-product STP and fill sumps; two cups of water from the diesel STP sump; one gallon of water from the diesel fill sump; and one inch of water in the auto vent sump. The service technicians did not remove any [Truncated]

Citation:	HSC 6.7 25290.1(e) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(e)
Violation Description:	Failure to maintain the interstitial space such that a breach in the primary or secondary containment is detected before the liquid or vapor phase of the hazardous substance stored in the UST tank is released into the environment, i.e., vapor, pressure, hydrostatic (VPH) monitoring.
Violation Notes:	Returned to compliance on 06/08/2018. On the truck side of the facility: the L22: dispenser 17 brine sensor failed when tested. Also the S2: diesel south vent and S3: diesel north piping failed the high liquid alarm when tested. The sensors monitoring the liquid level in the interstitial space shall be maintained so that a breach in the primary or secondary containment is detected before the hazardous substance is released into the environment. Correct immediately by having a properly licensed, trained, and certified contractor replace the failed component with a functional component (LG 113-x listed, if applicable) and obtain a permit within one business day from the EHD. If the failed component can t be replaced immediately, there is a possibility that the diesel tank 1 south UST system may be red tagged to prevent fuel inputs. Vacuum sensor monitoring of the secondary containment piping on the auto and truck sides of the facility of the vacuum/pressure/hydrostatic (VPH) system were not tested during the [Truncated]

Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 07/12/2019. Owners or operators of

FAST LANE CENTRAL VALLEY (Continued) **S121739838**

underground storage tanks that do not meet California Code of regulations, title 23 division 3, chapter 16 section 2635(c)(2) shall test overfill prevention equipment once by October 13th, 2018 and every 36 months thereafter; and within 30 days of the date of a repair. The site conducted the test on 1/25/19, over three months late. Ensure to conduct overfill prevention equipment inspection within the time frame provided by the regulation and submit test results within 30 days of performing the inspection. Overfill prevention equipment inspection is required once by October 13th, 2018 and every 36 months thereafter. Take all necessary precautions to ensure testing is performed in a timely manner. Ensure a 48 hour notification is provided to EHD prior to conducting the inspection. Test result for the testing performed must be submitted within 30 day of testing.

Site ID: 116020
Site Name: Fast Lane Central Valley
Violation Date: 07-16-2015
Citation: HSC 6.7 25291 - California Health and Safety Code, Chapter 6.7, Section(s) 25291
Violation Description: Failure to maintain under-dispenser containment, sumps, and/or other secondary containment in good condition and/or free of debris/liquid.
Violation Notes: Returned to compliance on 04/18/2018. Liquid was found in the truck side diesel vent sump, truck side diesel north and south turbine sumps. The gaskets from the sump lids/collars of the truck side diesel north and south turbine sumps are missing. These sumps are not liquid vapor tight. Secondary containment shall be constructed to prevent any water intrusion into the system by precipitation, infiltration, or surface runoff. Immediately remove this liquid, make a hazardous waste determination per Title 22 hazardous waste regulations, and manage accordingly. Immediately contact a properly licensed, trained, and certified contractor to address the water intrusion into the truck side diesel vent sump, truck side diesel north and south turbine sumps under permit and inspection of the EHD.

FAST LANE CENTRAL VALLEY (Continued) **S121739838**

Violation Description: Failure of a UST system installed on or after July 1, 2004 to be designed and constructed with a monitoring system capable of detecting the entry of the liquid or vapor-phase of the hazardous substance stored in the primary containment into the secondary containment and capable of detecting water intrusion into the secondary containment.
Violation Notes: Returned to compliance on 07/17/2016. The Diesel North and Diesel South submersible turbine pump (STP) sump 208 sensors on the truck side failed when tested. The continuous monitoring system shall be maintained to detect the entry of the liquid or vapor phase of the hazardous substance stored in the primary containment into the secondary containment and to detect water intrusion into the secondary containment. The 208 sensors were replaced and retested during the inspection. A UST Retrofit Verification with Inspector Already Onsite form has been completed and provided to the operator and contractor. This was corrected on site.

Violation Date:	06-17-2016
Citation:	23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description:	Failure of the overfill prevention system to meet one of the following requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.
Violation Notes:	Returned to compliance on 08/08/2016. Mechanical flappers were visible in drop tubes for every underground storage tank (UST) on both the auto and truck side of the facility. The UST Tank Information forms for all five USTs in CERS list "Yes" for Fill Tube Shut-off Valve, indicating overfill protection by mechanical flappers. However, in the Comments/Additional Information section of the Monitoring Plan for all five USTs in CERS, the statement "Overfill prevention is set at 90% of tank capacity with audible and visual alarms." The service technicians could not identify whether overfill protection was performed by flappers or automatic tank gauges (ATGs). The EHD must be informed what method is used for overfill protection on both the auto and truck sides of the facility. If mechanical flappers are being used, provide documentation that the flappers have been set at 95 percent. If overfill protection is performed by 90 percent capacity of the tank using ATGs with audible and visual alarm, then verification of [Truncated]

Citation: 23 CCR 16 2641(h) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(h)
Violation Description: Failure to have an approved UST Monitoring Plan.
Violation Notes: Returned to compliance on 06/10/2020. The monitoring plan is not current and/or not approved by the EHD. For all tanks: -Under "Pipe Monitoring is Performed Using the Following Method(s)" it states pressure for "Piping Secondary Containment" however while the

FAST LANE CENTRAL VALLEY (Continued) **S121739838**

inspector was out on site, vacuum for "Piping Secondary Containment" was observed. -The monitoring plan did not list the sensor that is being used to monitor the vacuum of the pipe. For "Under Dispenser Containment (UDC) Monitoring" pressure is listed as "UDC Secondary Containment Monitoring" however while the inspector was out in the field the UDCs were observed to have interstitial fluid inside the secondary containment. Furthermore the monitoring plan for the Diesel south and Diesel north tank in the truck side: It states yes for "Leak Alarm Triggers Automatic Pump Shutdown" however while the inspector was on the field S1-diesel south piping sensor and S3-Diesel North piping high liquid alarm did not triggered an automatic pump shut down. The monitoring

Violation Description:	Failure to have an approved UST Monitoring Plan.
Violation Notes:	Returned to compliance on 04/19/2018. The monitoring plan is not current and/or not approved by the EHD. For all five underground storage tanks: under Pipe Monitoring is Performed Using the Following Methods, add the brine interstitial 304 sensor to "Leak Sensor Model", and add "Yes" to Leak Alarm Triggers Automatic Pump Shutdown, and "Yes" to Failure Disconnect Triggers Pump Shutdown; beneath Under Dispenser Containment (UDC) Monitoring, add the brine interstitial 304 sensor; under Recordkeeping, change "No" to "Yes" for Equipment Maintenance and Calibration Records. The monitoring plan must be uploaded to the California Environmental Reporting System (CERS). Immediately log into CERS, make the necessary changes, and submit for review by the EHD.

Violation Date:	06-17-2016
Citation:	23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)
Violation Description:	Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been properly trained.
Violation Notes:	Returned to compliance on 04/18/2018. The designated operator failed to document all the alarms from the attached alarm history on the January 29, 2016 and May 28, 2016 designated operator monthly inspection reports and failed to check that they were responded to appropriately. The missing alarms include: L22, brine sensor in

FAST LANE CENTRAL VALLEY (Continued) **S121739838**

dispenser 17A/18B on the truck side, on January 27, 2016 and three times on May 20, 2016. During the monthly inspection, the designated operator shall review the alarm history for the previous month, check that each alarm was documented and responded to appropriately, and attach a copy of the alarm history with documentation taken in response to any alarms to the monthly report. Ensure that designated operators performing monthly inspections at this facility are including all of the required information on the reports.

Violation Description:	Failure of leak detection equipment to be located such that equipment is capable of detecting a leak at the earliest possible opportunity.
Violation Notes:	Returned to compliance on 06/20/2017. The 208 sensors in the tank 1 diesel south and tank 2 diesel north submersible turbine pump (STP) sumps were located on the opposite side of the sumps from where most of the liquid had accumulated at the lowest point in the sumps and the 208 sensors were not located to detect a leak at the earliest opportunity. Monitoring equipment shall be maintained to be able to detect a leak at the earliest possible opportunity. The sensor was relocated to the lowest point of the sump by the service technician. Ensure that all monitoring equipment is maintained to detect a leak at the earliest opportunity. This was corrected on site.

Eval Type: Other, not routine, done by local agency
Eval Notes: An inspection checklist was provided to the facility operator on the day of continuation of the monitoring system certification inspection performed on August 8, 2016. The Environmental Health Department (EHD) completed the amended written report on September 1, 2016, which replaced the checklist left at the facility, and emailed the amended report, along with the checklist completed on August 8, 2016 and photos taken on August 8, 2016, to Hardeep Gill, environmental contact. The September 1, 2016 inspection report for the August 8, 2016 testing was amended again by the EHD on September 8, 2016, by revising violation 319. The EHD has amended for a third time the inspection report for testing performed on August 8, 2016. The revision includes removing violation 313. Complete and submit a copy of the Return to Compliance Certification form to the EHD with a statement documenting the corrective actions that have been or will be taken for each violation, and any supporting [Truncated]

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Inspection commenced June 29, 2015. The appointment with the EHD was for 9:00am. The testing did not begin until 10:15am. Testing could not be completed on the 29th due to time constraints. A checklist of violations was left on site. Inspector arrived on site on June 30, 2015 at the 9:00am scheduled appointment time. The testing did not begin until almost 11:00am. Inspector witnessed testing by Al Milburn, technician who was on site yesterday with Brian Dunahay. The certifications used yesterday were Brian's. Inspector told Al she would need to see his certifications. He said ok. At completion of the inspection Al showed inspector certifications. His ICC certification is current but the V/R expired 6/17/2015. Al stated he completed course, need to take the online exam today after we were finished with inspection. Inspection agreed to accept certification if it was completed today and had todays date on it. Inspector spoke with Brian and he confirmed he would email a [Truncated]

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violation Date: 09-17-2015
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

JOHN R LAWSON ROCK & OIL (Continued) **S121741815**

Violation Notes:	Returned to compliance on 09/21/2015. 600 Gallons of Used Oil, 238 gallons of new motor oil, and 1000 gallons of DEF, were found on site that have not been reported. Any material that meets or exceeds the reportable quantity shall be reported in the facility's business plan. Immediately log into the California Environmental Reporting System (CERS) at http://cers.calepa.ca.gov/, add the materials to the hazardous material inventory, and submit to the EHD for approval.
Violation Division:	San Joaquin County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	126524
Site Name:	JOHN R LAWSON ROCK & OIL
Violation Date:	06-24-2019
Citation:	22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7
Violation Description:	Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.
Violation Notes:	Returned to compliance on 07/24/2019. Two blue 55 gallon poly drums in the compressor room were missing empty labels. Containers larger than five gallons that previously held a hazardous material shall be marked with the date they were emptied and managed within one year of being emptied. Immediately mark and manage all empty containers per this section.

Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes:	Returned to compliance on 09/25/2018. The business plan information has not been reviewed and resubmitted in the California Environmental Reporting System (CERS) annually. The business plan was not submitted between 11/1/2018 to The hazardous materials inventory shall be submitted by January 15 of each calendar year and may be submitted

JOHN R LAWSON ROCK & OIL (Continued) **S121741815**

beginning November 1 of the previous year. Immediately log into the CERS at http://cers.calepa.ca.gov/, enter the correct or updated information, and submit to the EHD for approval.

Violation Division: San Joaquin County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 126524
Site Name: JOHN R LAWSON ROCK & OIL
Violation Date: 06-24-2019
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 07/24/2019. In the shop area: -Two black 55 gallon steel drums (full, 1/3 full) containing oil filters were missing accumulation start dates. -One green 55 gallon steel drum containing oil filters (1/8 full) was missing an accumulation start date. -One blue 16 gallon steel drum containing oily debris (1/2 full) was missing an accumulation start date. Facilities who generate less than 1000 kg of hazardous waste per month and do not exceed 6000 kg of waste stored on site at any time may store waste on site up to 180 days. Since it cannot be determined how long the hazardous waste has been on site, immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest. Submit a copy of the manifest to the EHD within 30 days.

Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 12/22/2015. Training records were not available at the time of inspection. The business plan shall include provisions for ensuring that appropriate personnel receive initial and annual refresher training. This training shall be documented electronically or by hard copy and shall be made available for a minimum of three years. Immediately provide employee training for appropriate personnel and submit a copy of the training records to the EHD.

Violation Date: 10-27-2016
Citation: 23 CCR 16 2715(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(f)
Violation Description: Failure to have at least one employee present during operating hours that has been trained in the proper operation and maintenance of the UST system by a designated operator (DO).
Violation Notes: Returned to compliance on 03/01/2017. The designated operator employee training was not complete. The log on site did not have the name of the trainer, and the information employees were trained on. Immediately provide training for employees and submit a completed training log to the EHD. This is a repeat violation (which is currently still open) from 2015.
Violation Division: San Joaquin County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 60255

Site Name:	RAMOS OIL-FRENCH CAMP
Violation Date:	10-29-2015
Citation:	23 CCR 16 2711(a)(8) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2711(a)(8)
Violation Description:	Failure to submit, obtain approval, or maintain a complete/accurate plot plan.
Violation Notes:	Returned to compliance on 10/20/2017. An accurate UST Monitoring Site Plan was not submitted. Missing are the UDC sensors, annular sensor, and fill sump sensor. A site plan must be submitted identifying the locations where monitoring will be performed. Immediately log into the California Environmental Reporting System (CERS) at http://cers.calepa.ca.gov/ and upload a copy of the UST Monitoring Site Plan.

Violation Program:	UST
Violation Source:	CERS,
Site ID:	60255
Site Name:	RAMOS OIL-FRENCH CAMP
Violation Date:	10-27-2016
Citation:	HSC 6.7 25291(a)(1) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(a)(1)
Violation Description:	Failure to construct, operate, and maintain primary containment as product-tight.
Violation Notes:	Returned to compliance on 03/01/2017. Diesel liquid was discovered in UDCS 1-2, 2S-3, 3-4 and 4S-5S dispensers, during the 2015 routine inspection, indicating a leak in the primary piping. All primary containment for the UST system must be tight. Immediately have a properly licensed, trained, and certified contractor repair or replace the failed component under permit and inspection of the EHD. This is a repeat violation (which is currently still open) from 2015.
Violation Division:	San Joaquin County Environmental Health

Site Name:	RAMOS OIL-FRENCH CAMP
Violation Date:	10-29-2015
Citation:	HSC 6.7 25286(a) - California Health and Safety Code, Chapter 6.7, Section(s) 25286(a)
Violation Description:	Failure to submit an complete and accurate application for a permit to operate an underground storage tank, or for renewal of the permit.
Violation Notes:	Returned to compliance on 10/20/2017. The UST Tank Information form for the diesel tank (TA0505616) is not current in CERS. Primary containment tank construction, piping construction and piping primary containment, vent primary and secondary containment construction, vapor recovery primary and secondary containment construction, riser pipe primary and secondary containment construction, vent piping transition sumps construction, and corrosion protection were not provided or were incorrect. Also the applicant's name on the UST Tank Information form is outdated. Any change of information must be updated in CERS within 30 days of the changes. Immediately log into CERS, update the required information, and submit for review by the EHD.

Violation Description:	Failure to maintain monitoring and maintenance records (e.g., alarm logs) and/or maintain records of appropriate follow-up actions.
Violation Notes:	Returned to compliance on 04/06/2018. Maintenance and monitoring records for the last three years were not found on site. The 2016 annual spill bucket and line leak detector test results were not available for review during the time of inspection. On the July 2017 monthly designated operator (DO) report, the DO mentioned that the filter piping was leaking which was triggering an L7: master dispenser 3-4 alarm. The DO noted that a "Ramos Mechanic" came out to the site to fix the leak. There were no work orders or logs found on site documenting the repair. Immediately submit documents showing how the leak was fixed and what was done with the waste to the EHD. On October 20, 2017, there was an L2: diesel stp sump fuel alarm that occurred. According to Joy Kachadorian, Ramos should have come to the site to investigate the alarm. There were no records on site indicating how the alarm was handled. Immediately submit documents to EHD showing how the alarm was handled. These records shall be maintained [Truncated]

Violation Date:	10-29-2020
Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 10/25/2021. OBSERVATION: The designated operator failed to check and note all required items on the visual inspection reports. The incorrect and missing information included the following from the inspection reports: -Question 9 was left blank. REGULATION GUIDANCE: During the visual inspection, the designated operator shall check that all required testing and maintenance for the UST system have been completed and shall check all required items on the report. CORRECTIVE ACTION: Ensure that designated operators performing visual inspections at this facility are including all of the required information on the reports.

Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Manifest number 018139946JJK (12/21/17) was not found on site. Manifest number 013679675JJK (10/7/16) was found on site without a TSDF signed copy. Hazardous waste generators shall retain copies of all manifests for three years or until a copy signed off by the destination facility is received. The signed off copy shall be retained and made readily available for review for three years. If the generator did not receive a copy of the manifest with the handwritten signature of the owner or operator of the facility to which the generator s waste was submitted within 60 days of the date the waste was accepted by the initial transporter, the generator shall submit a legible copy of the missing manifest, with some indication that the generator has not received confirmation of delivery. This information shall be submitted to: DTSC Report Repository Generator Information

Violation Description: Failure to maintain monitoring records for release detection and/or maintain records of appropriate follow-up actions.
Violation Notes: Returned to compliance on 10/25/2021. OBSERVATION: Maintenance and monitoring records for the last three years were not found on site. - The 10//8/2018 Overfill prevention test results were not on site at the time of inspection. - The 10/31/2019 Monitoring system certification form test results were not site at the time of inspection. REGULATION GUIDANCE: These records shall be maintained on site for at least three years. Monitoring records include: (1) date and time of all monitoring or sampling; (2) monitoring equipment calibration and maintenance records; (3) results of any visual observations; (4) results of sample analysis performed a lab or in the field; (5) logs of all readings of gauges or other monitoring equipment, ground water elevations, or other test results; (6) results of inventory readings and reconciliations. CORRECTIVE ACTION: Immediately locate and maintain all missing maintenance and monitoring records for the last three years on site and submit copies to the EHD.

Citation: HSC 6.7 25291(a)(1) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(a)(1)
Violation Description: Failure to maintain the primary containment as product-tight.
Violation Notes: Returned to compliance on 10/30/2014. Approximately 1 cup of diesel

RAMOS OIL-FRENCH CAMP (Continued) **S121788905**

fuel was observed in the Dispenser #2 and #4 UDC, indicating a leak in the primary piping. All primary containment for the UST system must be tight. Observed technician cleaned up the fuel with absorbent pads which were then placed in a hazardous waste container on site, and tightened the connection in the Dispenser which technician said the "weeping" was coming from. Violation has been corrected on site. This is a Minor Violation.

Site Name: RAMOS OIL-FRENCH CAMP
Violation Date: 10-27-2016
Citation: 23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)
Violation Description: Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been properly trained.
Violation Notes: Returned to compliance on 03/01/2017. The designated operator failed to check and note the correct test dates for the monitoring system certification, spill bucket certification, and secondary containment testing on monthly reports January 2016-October 2016. Secondary containment test results were incorrectly logged as October 16, 2011 for the months January-October 2016. Monitoring system certification

RAMOS OIL-FRENCH CAMP (Continued) **S121788905**

and spill bucket certifications were listed as October 31, 2013 and October 31, 2012 for the months June, July, and August 2016. On the other reports corrections were noted in red. When asked Steven said he had made the corrections today (October 27, 2016). The alarm histories attached to January-April 2016 were printouts from today according to Steven. An alarm occurred April 27, 2016 for sensors L-2 and L-3. These alarms were not identified on the designated operator monthly report done on April 29, 2016. This report indicated there had not been any alarms, as did the reports conducted after this The [Truncated]

Citation:	23 CCR 16 2636(f)(4) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(4)
Violation Description:	Failure to meet one or more of the following monitoring requirements in lieu of the requirement to be tightness tested every 12 months: The monitoring system maintains all product piping outside the dispenser to be fail-safe and shut down the pump when a leak is detected. The monitoring system shuts down the pump or stops flow when a leak is detected in the under dispenser containment (UDC).
Violation Notes:	Returned to compliance on 10/25/2018. The L5 Satellite #1 UDC sensor did not shut down the turbine when tested and did not meet the requirements for annual line tightness testing exemption. The service technician reprogrammed the monitoring panel for positive shutdown for the L5 sensor, which satisfies the annual line tightness testing requirement. Ensure that all leak detection equipment is properly programmed at all times. This was corrected on site.

Violation Date:	10-25-2017
Citation:	23 CCR 16 2712(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(f)
Violation Description:	Failure to implement the corrections specified in the inspection report within 30 calendar days of receiving an inspection report from either the CUPA or special inspector.
Violation Notes:	Returned to compliance on 04/06/2018. An inspection was last done on October 27,2016 and an inspection report was issued identifying information to be submitted to bring this site into compliance. This information was required to be submitted by November 26,2016. An operator that receives an inspection report shall have 30 days to submit a written response that includes a statement documenting corrective actions taken or proposing corrective actions which will be taken. Ensure that a written response documenting corrective actions taken or proposed is submitted within 30 days of receiving an inspection report.

Violation Description:	Failure to comply with one or more of the designated operator monthly inspection requirements: failed to inspect the monthly alarm history report; attach a copy of the alarm history; failed to inspect for the presence of liquid or debris in the spill container/spill bucket and under dispenser containment; failed to inspect the under dispenser containment to ensure that monitoring equipment is placed in the proper position; failure to inspect for liquid or debris in the containment sump where an alarm occurred or for which there is no record of a service visit; or failure to check that all testing and maintenance has been completed and documented.
Violation Notes:	Returned to compliance on 03/01/2017. The designated operator failed to check and note the correct test dates for the monitoring system certification (noted as 10/31/13), spill bucket certification (noted as 10/31/12), and secondary containment testing (noted as 10/16/11) from December 2014 through February 2015, and April through September 2015 on the designated operator monthly inspection reports. During the monthly inspection, the designated operator shall check that all required testing and maintenance for the UST system have been completed and document the dates they were done. Ensure that designated operators performing monthly inspections at this facility are including all of the required information on the reports. The designated operator did not attach an alarm history to the March 2015 designated operator monthly inspection reports (dated 3/26/15 and 3/30/15). During the monthly inspection, the designated operator shall review the alarm history for the previous month, check that each alarm was [Truncated]

Violation Date: 10-28-2022
Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: OBSERVATION: The designated operator failed to check and note all required items on the visual inspection reports. The incorrect and missing information included the following from the inspection reports: D.O. report 12/6/21: Designated operator noted compliance issues that the owner/operator did not describe the follow up actions to correct noted compliance issues. REGULATION GUIDANCE: During the visual inspection, the designated operator shall check that all required testing and maintenance for the UST system have been completed and shall check all required items on the report. CORRECTIVE ACTION: Ensure that designated operators performing visual inspections at this facility are including all of the required information on the reports.

Violation Date:	10-27-2016
Citation:	HSC 6.7 25299 - California Health and Safety Code, Chapter 6.7, Section(s) 25299
Violation Description:	Owner/operator make false statements, representation, or certification on an application, record, or other document.
Violation Notes:	Returned to compliance on 03/01/2017. During the inspection it was noted by the inspector several designated monthly inspection reports looked almost identical to one another. The writing was in red and all of the same fill in the blank areas and "corrections" were noted. The alarm histories that were attached did not have a date on the top of them. One of the reports from April should have had an alarm noted and did not. Instead it was noted there had not been any alarms for the previous month. When the designated operator, Steven Richardson was asked if he had completed the reports today (October 27, 2016) he said yes. He said the reports had been completed but are now missing. Immediately prepare a written statement and submit it to the EHD indicating how this practice will be prevented in the future and whats steps will be taken to ensure compliance.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/11/2001
Comments: DTSC approved the Preliminary Endangerment Assessment (PEA). Based on the information presented in the PEA, neither an actual a potential release of hazardous material, nor the presence of naturally occurring hazardous material indicated a the site pose threat to human health or the environment under any land use. Therefore, DTSC concurred that no further environmental investigation or cleanup was required at this site, and approved the PEA.

4TH HIGH SCHOOL/WESTON RANCH (Continued) **S104549147**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 01/06/2000
Comments: Phase 1- Pursuant to an agreement between the Department of Toxic Substancs Control (DTSC) and the California Department of Education, DTSC's Site Mitigation Program completed a review of a Phase I Environmental Assessment and has determined that a Preliminary Endangerment Assessment is required. The PEA will be conducted under DTSC's oversight pursuant to agreements between DTSC and the pertinent school district. Any subsequent cleanup activities (if needed) after the PEA would be conducted pursuant to agreements between DTSC and the Manteca Unified School District.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/25/2023

Next Scheduled EDR Contact: 04/10/2023
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 01/25/2023

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 08/25/2022

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS TSCA: PFAS Manufacture and Imports Information

EPA issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. EPA publishes non-confidential business information (non-CBI) and includes descriptive information about each site, corporate parent, production volume, other manufacturing information, and processing and use information.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

SINGH PETROLEUM AND BACAY PROPERTIES
11293 SOUTH MANTHEY ROAD AND 169 MANILA ROAD
LATHROP, CA 95330

TARGET PROPERTY COORDINATES

Latitude (North):	37.854802 - 37ˆ 51’ 17.29’’
Longitude (West):	121.285229 - 121ˆ 17’ 6.82’’
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	650858.1
UTM Y (Meters):	4190885.5
Elevation:	16 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	12008720 LATHROP, CA
Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

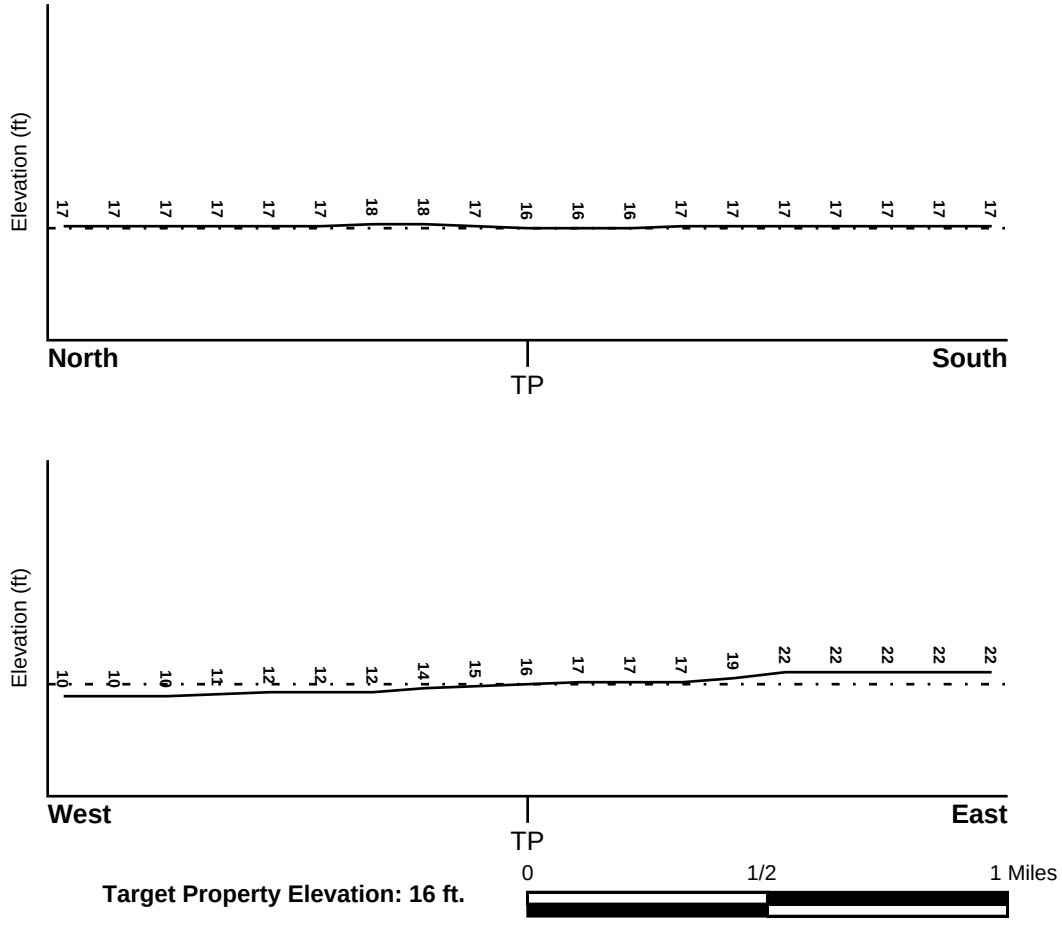
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 16 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06077C0610F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LATHROP	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: VERITAS

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.01 Min: 0	Max: Min:
2	14 inches	53 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.01 Min: 0	Max: Min:
3	53 inches	70 inches	cemented	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.01 Min: 0	Max: Min:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: MANTECA

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4
2	11 inches	24 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4
3	24 inches	35 inches	indurated	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4
4	35 inches	53 inches	cemented	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4
5	53 inches	74 inches	stratified loamy sand to loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: HONCUT

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	20 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.1
2	20 inches	59 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

Interview Documentation

ASTM Transaction Screen Questionnaire
for the Phase I Environmental Site Assessment (E1527-21)
& Environmental Transaction Screen Processes (E1528-14)

In accordance with ASTM Standard Process E1527-21, the objective of an interview/questionnaire is to obtain information indicating Recognized Environmental Conditions (RECs) in connection with the property. This questionnaire is to be completed by the current/past property owner, occupant or anyone with past knowledge concerning the property, either in written form or verbally, with questions asked by AdvancedGeo, Inc. (AGI) or User (Client) designated parties. All questions should be answered to the best of the respondent's actual knowledge and must be answered in good faith. Explanations to any answers, especially "Yes" answers, should be made in the space following the question or on a separate sheet, noting the question number. Please be as complete as possible; if you do not know the answer to a question, please check unknown. Following the site visit, it may be necessary for AGI or the preparer to ask clarifying questions of the interviewee(s).

Project Name & Number: Singh Petroleum and Bacay Properties

GENERAL HISTORY OF THE PROPERTY

When did you first obtain or begin managing this property? If you are not an owner, what is or was your relationship to the subject property? Are you still associated with the property?

- May 2019

From whom did the current owner obtain the property? How long did the former owner hold the property?

- Kelly Family

What is the general history of the property? Please include what residential or business uses have been made of the property and when, and what structures were built or demolished and when. If it is agricultural, what general crops have been grown and when.

- rural agriculture

What is the general history and use of the adjacent properties and the general surrounding area?

North: residence

South: residence

East: Interstate 5

West: agriculture

PRESENCE OF ASBESTOS IN ON-SITE STRUCTURE(S)

Has an asbestos survey been performed on the property buildings? ☐ Yes ☑ No ☐ Unknown

If YES, assuming the survey included physical sampling by a qualified firm, was the property free of asbestos, or not free of asbestos? ☐ Free ☐ Not Free ☐ Unknown

Explain as appropriate; do you have a copy of the survey report? ☐ Yes ☐ No
*if a copy is available, please provide to AGI

Do you have any past or present knowledge of asbestos-containing materials (ACMs) on the property? ☐ Yes ☑ No ☐ Unknown

If yes, describe:

- No structures on site

AdvancedGeo
An Employee-Owned Company

ADDITIONAL HAZARDS

Lead-based Paint (LBP): Are you aware of the presence of LBP-coated surfaces on the property structure(s)? ☐ Yes ☑ No ☐ Unknown

If yes, describe:

Is there any evidence on the subject property of illegal or dangerous on-site application, handling or storage of maintenance chemicals such as pesticides, rodenticides, fertilizers, cleaners, paint solvents, swimming pool cleaners, etc? ☐ Yes ☑ No ☐ Unknown

If yes, describe:

Have there ever been any dry wells, sumps, separators (or clarifiers or grease traps) or in-ground hydraulic lifts on the property? ☐ Yes ☑ No ☐ Unknown

If yes, describe (include where, what use and size, if known):

SUBJECT PROPERTY UTILITY INFORMATION

Is water currently provided by: ☐ public water system ☐ well ☐ private company

List name of utility provider and/or location of well, connection date: ☑ none or list-

Electrical utility provider and estimated connection date: ☑ none or list-

Natural gas utility provider and estimated connection date: ☑ none or list-

Does the property discharge waste water to a: ☐ municipal sewer sanitary system; ☐ on-site sewage treatment system; ☐ on-site septic system; or ☑ there is no sewer utility/septic on-site.

If the property is served by a septic system or systems, please list the location of the system (is a permit available?):

- decommissioned septic system

TRANSACTION SCREEN QUESTIONNAIRE (attach additional pages, if needed)

(1a.) Is the property *currently used*, or used in the *past*, for research, military and/or industrial use?

☐ Yes ☑ No ☐ Unknown -If yes, describe:

(1b.) Are any of the adjoining properties *currently used*, or have been used in the *past*, for research, military and/or industrial use? ☐ Yes ☑ No ☐ Unknown -If yes, describe:

2

(2a.) Is the property *currently used*, or used in the *past*, as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing lab, junkyard or landfill or as a waste treatment, storage, disposal, processing or recycling facility? ☐ Yes ☑ No ☐ Unknown

If yes, describe (and identify which):

(2b.) Are any of the adjoining properties *currently used*, or have been used in the *past*, as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing lab, junkyard or landfill or as a waste treatment, storage, disposal, processing or recycling facility?

☐ Yes ☑ No ☐ Unknown -If yes, describe (and identify which):

(3.) Are there *currently*, or have there been in the *past*, any damaged or discarded automotive or industrial batteries, pesticides, paints or other chemicals in individual containers larger than 5-gallon stored or used at the property or facility? ☑ Yes ☐ No ☐ Unknown -If yes, describe:

- Illegally dumped oil filters, to be cleaned up

(4.) Are there *currently*, or have there been in the *past*, any industrial drums, typically 55-gallon, or sacks of chemicals located on the property or facility? ☑ Yes ☐ No ☐ Unknown -If yes, describe:

- Two empty with oil residue, to be cleaned up

AdvancedGeo
An Employee-Owned Company

(5.) Did you observe evidence or do you have prior knowledge that fill dirt has been brought onto the property that originated from a *contaminated site* or from an *unknown origin*?

☐ Yes ☑ No ☐ Unknown -If yes, describe:

(6.) Are there *currently*, or have there been in the *past*, any pits, ponds or lagoons located on the property in connection with waste treatment or waste disposal?

☐ Yes ☑ No ☐ Unknown -If yes, describe:

(7.) Is there *currently*, or has there been in the *past*, any stained soil on the property?

☑ Yes ☐ No ☐ Unknown -If yes, describe:

- Illegal dump site, to be cleaned up

(8.) Are there *currently*, or has there been in the *past*, any registered or unregistered storage tanks (above or under-ground) located on the property? ☐ Yes ☑ No ☐ Unknown

If yes, where are they located? Number, Size, Content

(9.) Are there *currently*, or has there been in the *past*, any vent pipes, fill pipes or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property? ☐ Yes ☑ No ☐ Unknown -If yes, describe (include location):

(10.) Are there *currently*, or has there been in the *past*, any flooring, drains or walls located within the facility that are stained by substances other than water or are emitting foul odors?

☐ Yes ☑ No ☐ Unknown -If yes, describe:

AdvancedGeo
An Employee-Owned Company

(11a.) If the property is served by a private well or non-public water system, is there evidence or do you have prior knowledge that contaminants have been identified in the well or system that exceed guidelines applicable to the water system? ☐ Yes ☑ No ☐ Unknown Non-applicable

-If yes, describe:

(11b.) If the property is served by a private well or non-public water system, is there evidence or do you have prior knowledge that the well has been designated as contaminated by any government environmental/health agency? ☐ Yes ☑ No ☐ Unknown Non-applicable

-If yes, describe:

(12.) Does the owner or occupant of the property have any knowledge of environmental liens or governmental notification relating to *past* or *recurrent* violations of environmental laws with respect to the property or any facility located on the property? ☐ Yes ☑ No ☐ Unknown

-If yes, describe:

(13.) Has the owner or occupant of the property been informed of the *current* or *past* existence of hazardous substances or petroleum products with respect to the property or any facility located on the property? ☑ Yes ☐ No ☐ Unknown -If yes, describe:

- Used as illegal dump site with petroleum contamination

(14.) Has the owner or occupant of the property been informed of the *current* or *past* existence of environmental violations with respect to the property or any facility located on the property?

☐ Yes ☑ No ☐ Unknown -If yes, describe:

AdvancedGeo
An Employee-Owned Company

(15.) Does the owner or occupant of the property have any knowledge of any past environmental site assessments of the property or facility. (Phase I, II, sampling etc.) ☑ Yes ☐ No ☐ Unknown

- previous site assements by AGI from 2019 and 2021

If Yes, did the assessment indicate the presence of hazardous substances or petroleum products on, or contamination of, the property or recommended further assessment of the property?

☐ Yes ☑ No ☐ Unknown

Can you provide AGI with a copy (or copies) of any previous environmental assessments and/or documents in relation to the property? ☑ Yes ☐ No

(16.) Does the owner or occupant of the property have any knowledge of any past, threatened or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substances or petroleum products involving the property by any owner or occupant of the property? ☐ Yes ☑ No ☐ Unknown -If yes, describe:

(17a.) Does the property discharge waste water, on or adjacent to the property, other than storm water, into a storm water sewer system? ☐ Yes ☑ No ☐ Unknown -If yes, describe:

(17b.) Does the property discharge waste water, on or adjacent to the property, other than storm water, into a sanitary sewer system? ☐ Yes ☑ No ☐ Unknown -If yes, describe:

(18.) Did you observe evidence or do you have any prior knowledge that any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials have been dumped above grade, buried and/or burned on the property?

☑ Yes ☐ No ☐ Unknown -If yes, describe:

- Illegal dump site

AdvancedGeo
An Employee-Owned Company

(19.) Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCBs? ☐ Yes ☑ No ☐ Unknown -If yes, describe:

(20.) Are there any additional items of possible environmental concern regarding the property that have not been discussed in this interview? ☐ Yes ☑ No -If yes, describe:

Note: Helpful subject property documents that should be transmitted to AGI include the following:

- Environmental Site Assessment Reports
- Environmental Compliance Audit Reports
- Environmental permits
- UST/AST registrations
- Underground injection system registrations
- Hazardous Materials Inventories and Hazardous Materials Management Plans
- Risk assessments
- Geotechnical studies
- Recorded AULs (Activity and Use Limitations)

APPENDIX E

VAPOR ENCROACHMENT SCREENING (ASTM E2600-15)

Singh Petroleum and Bacay Properties
11293 South Manthey Road and 169 Manila Road, Lathrop, California 95330
March 2023

In accordance with ASTM Standard E2600-15 and the Buonicore Area of Concern determination (2011)[i], AdvancedGeo, Inc. performed the initial Tier 1 Vapor Encroachment Screening which includes determining the presence or likely presence of volatile organic compounds (VOCs) vapors in the sub-surface of the subject property (SP) caused by the release of vapors from contaminated soil or groundwater either on or near the Target Property within an Area of Concern (AOC) to determine if a potential Vapor Encroachment Condition (VEC) exists. Should sites fall within the AOC, a limited Tier 2 screening will be performed.

TIER 1 SCREENING

(1) Soil-Vapor Sampling

(1a) Has a soil-vapor investigation been completed at the subject or suspected contamination site (or sites)?

X	No	Proceed to **(2)**
	Yes	Proceed to **(1b)**

(1b) Are **non-petroleum hydrocarbon COC** or **petroleum hydrocarbon COC** present above established screening levels for the for soil-vapor beneath the subject property. **Not Applicable**

(2) Ground Water Flow Direction: Is the groundwater flow direction known?

	No	Proceed to **(2a)**
X	Yes	Proceed to **(2b)**
		Groundwater flow direction: **Northwest**

(2a) If groundwater flow direction is **unknown**, the AOC is:

- Non-Petroleum Hydrocarbon Contaminants of Concern (COC): **1,760 feet (1/3-mile)** from the contaminated site boundary to the boundary of the SP.
- Dissolved Petroleum Hydrocarbon COC: **528 feet (1/10-mile)** for from the contaminated site boundary to the boundary of the SP.
- Free Product (Light non-aqueous phase liquids [LNAPL]) COC: **528 feet**

(1/10-mile) for from the contaminated site boundary to the boundary of the SP.

Are sites located within the AOC? **Not Applicable**

(2b) If groundwater flow direction is known, the AOC for non-petroleum hydrocarbon COC and dissolved petroleum hydrocarbon or free product (LNAPL) COC is:

- Non-Petroleum Hydrocarbon COC: **1,760 feet (1/3-mile)** in the up-gradient position, **365 feet** in the equi-gradient position, and **100 feet** in the down-gradient position.
- Dissolved Petroleum Hydrocarbon COC: **528 feet (1/10-mile)** in the up-gradient position; **95 feet** in the equi-gradient position, and **30 feet** in the down-gradient position.
- Free Product (LNAPL) COC: **528 feet (1/10-mile)** in the up-gradient position, **165 feet** in the equi-gradient position, and **100 feet** in the down-gradient position.

Are sites located within the AOC?

X	No	Tier 1 screening is complete, and no VEC currently exists, proceed to **CONCLUSIONS**
	Yes	Proceed to **(3)**

(3) Subsurface Characteristics

(3a) Is there a hydraulic (e.g., a river) or physical barrier (e.g., clay barrier) between the SP and the suspected contaminated site (or sites)? **Not Applicable**

(3b) Are **non-petroleum hydrocarbon COC** and **dissolved petroleum hydrocarbon** or **free product (LNAPL) COC** known to be in the groundwater beneath the subject property. **Not Applicable**

TIER 2 SCREENING

If the Tier 1 screening indicates that a VEC exists, the Tier 2 non-invasive screening can be used to refine screening. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas and/or groundwater monitoring results to provide greater certainty to whether or not a VEC exists. The Tier 2 screening involve a Plume Test and Critical Distance Determination. **The Critical Distance Determination requires that the edge of the plume be known**. The Critical Distance is the lineal distance in any direction between the nearest edge of the contaminated plume and the nearest SP boundary.

A Tier 2 Screening was not warranted for the subject property.

CONCLUSIONS

(1) Conclusions: Impact on Subject Property

A VEC exists

X A VEC does not exist

Qualifications of the Environmental Professionals

ROBERT D. LOEFFLER

POSITION
VICE PRESIDENT, SENIOR GEOLOGIST

EDUCATION
B.S. Geological Sciences – California State University, Fullerton
Course work in ground water technologies - UC Davis Extension

PROFESSIONAL REGISTRATION
California Professional Geologist No. 6709
Arizona Registered Geologist No. 34944
Washington Licensed Geologist No. 2751
Texas Professional Geoscientist No. 10890
Registered Environmental Property Assessor No. 136161 (NREP)
Qualified SWPPP Practitioner (QSP) and Qualified SWPPP Developer (QSD) No. 24014

DUTIES
Mr. Loeffler's current duties include design, planning, coordination, and supervision of various environmental projects. These projects include all phases of environmental assessment, site assessments, and mitigation of contaminated soil and groundwater. During the course of projects, he acts as liaison between the client and regulatory agencies, schedules work, supervises projects from start to finish, and prepares and reviews work plans and reports.

EMPLOYMENT HISTORY

2020 - Present:	Vice President, Senior Geologist AdvancedGeo, Inc. (an Employee-Owned Company)
1992 - 2019:	Vice President, Senior Geologist Advanced GeoEnvironmental, Inc.
1989 - 1992:	Project Geologist Geological Audit Services, Inc., Yorba Linda, California
1988 - 1989:	Staff Geologist Applied Hydrogeologic Consultants, Santa Ana, California
1988:	Geologist USGS - Pacific Marine Division, Seattle, Washington

REBECCA E. NATAL

POSITION
PROJECT SCIENTIST

EDUCATION
B.S. Biological Sciences – University of the Pacific

PROFESSIONAL REGISTRATIONS AND CERTIFICATIONS
California Certified Site Surveillance Technician No. 15-5520
California Lead-Related Construction Sampling Technician No. 29351

DUTIES
Ms. Natal has a broad range of experience in site assessment, remediation, industrial hygiene and due diligence. She has over 15 years of experience completing Phase I and Phase II site assessments and presently manages numerous industrial-hygiene and due diligence-related projects throughout the Western United States.

EMPLOYMENT HISTORY

Appendix A: Acoustical Terminology

Acoustics	The science of sound.
Ambient Noise	The distinctive acoustical characteristics of a given space consisting of all noise sources audible at that location. In many cases, the term ambient is used to describe an existing or pre-project condition such as the setting in an environmental noise study.
ASTC	Apparent Sound Transmission Class. Similar to STC but includes sound from flanking paths and correct for room reverberation. A larger number means more attenuation. The scale, like the decibel scale for sound, is logarithmic.
Attenuation	The reduction of an acoustic signal.
A-Weighting	A frequency-response adjustment of a sound level meter that conditions the output signal to approximate human response.
Decibel or dB	Fundamental unit of sound, A Bell is defined as the logarithm of the ratio of the sound pressure squared over the reference pressure squared. A Decibel is one-tenth of a Bell.
CNEL	Community Noise Equivalent Level. Defined as the 24-hour average noise level with noise occurring during evening hours (7 - 10 p.m.) weighted by +5 dBA and nighttime hours weighted by +10 dBA.
DNL	See definition of Ldn.
IIC	Impact Insulation Class. An integer-number rating of how well a building floor attenuates impact sounds, such as footsteps. A larger number means more attenuation. The scale, like the decibel scale for sound, is logarithmic.
Frequency	The measure of the rapidity of alterations of a periodic signal, expressed in cycles per second or hertz (Hz).
Ldn	Day/Night Average Sound Level. Similar to CNEL but with no evening weighting.
Leq	Equivalent or energy-averaged sound level.
Lmax	The highest root-mean-square (RMS) sound level measured over a given period of time.
L(n)	The sound level exceeded a described percentile over a measurement period. For instance, an hourly L50 is the sound level exceeded 50% of the time during the one-hour period.
Loudness	A subjective term for the sensation of the magnitude of sound.
NIC	Noise Isolation Class. A rating of the noise reduction between two spaces. Similar to STC but includes sound from flanking paths and no correction for room reverberation.
NNIC	Normalized Noise Isolation Class. Similar to NIC but includes a correction for room reverberation.
Noise	Unwanted sound.
NRC	Noise Reduction Coefficient. NRC is a single-number rating of the sound-absorption of a material equal to the arithmetic mean of the sound-absorption coefficients in the 250, 500, 1000, and 2,000 Hz octave frequency bands rounded to the nearest multiple of 0.05. It is a representation of the amount of sound energy absorbed upon striking a particular surface. An NRC of 0 indicates perfect reflection; an NRC of 1 indicates perfect absorption.
RT60	The time it takes reverberant sound to decay by 60 dB once the source has been removed.
Sabin	The unit of sound absorption. One square foot of material absorbing 100% of incident sound has an absorption of 1 Sabin.
SEL	Sound Exposure Level. SEL is a rating, in decibels, of a discrete event, such as an aircraft flyover or train pass by, that compresses the total sound energy into a one-second event.
SPC	Speech Privacy Class. SPC is a method of rating speech privacy in buildings. It is designed to measure the degree of speech privacy provided by a closed room, indicating the degree to which conversations occurring within are kept private from listeners outside the room.
STC	Sound Transmission Class. STC is an integer rating of how well a building partition attenuates airborne sound. It is widely used to rate interior partitions, ceilings/floors, doors, windows and exterior wall configurations. The STC rating is typically used to rate the sound transmission of a specific building element when tested in laboratory conditions where flanking paths around the assembly don't exist. A larger number means more attenuation. The scale, like the decibel scale for sound, is logarithmic.
Threshold of Hearing	The lowest sound that can be perceived by the human auditory system, generally considered to be 0 dB for persons with perfect hearing.
Threshold of Pain	Approximately 120 dB above the threshold of hearing.
Impulsive	Sound of short duration, usually less than one second, with an abrupt onset and rapid decay.
Simple Tone	Any sound which can be judged as audible as a single pitch or set of single pitches.

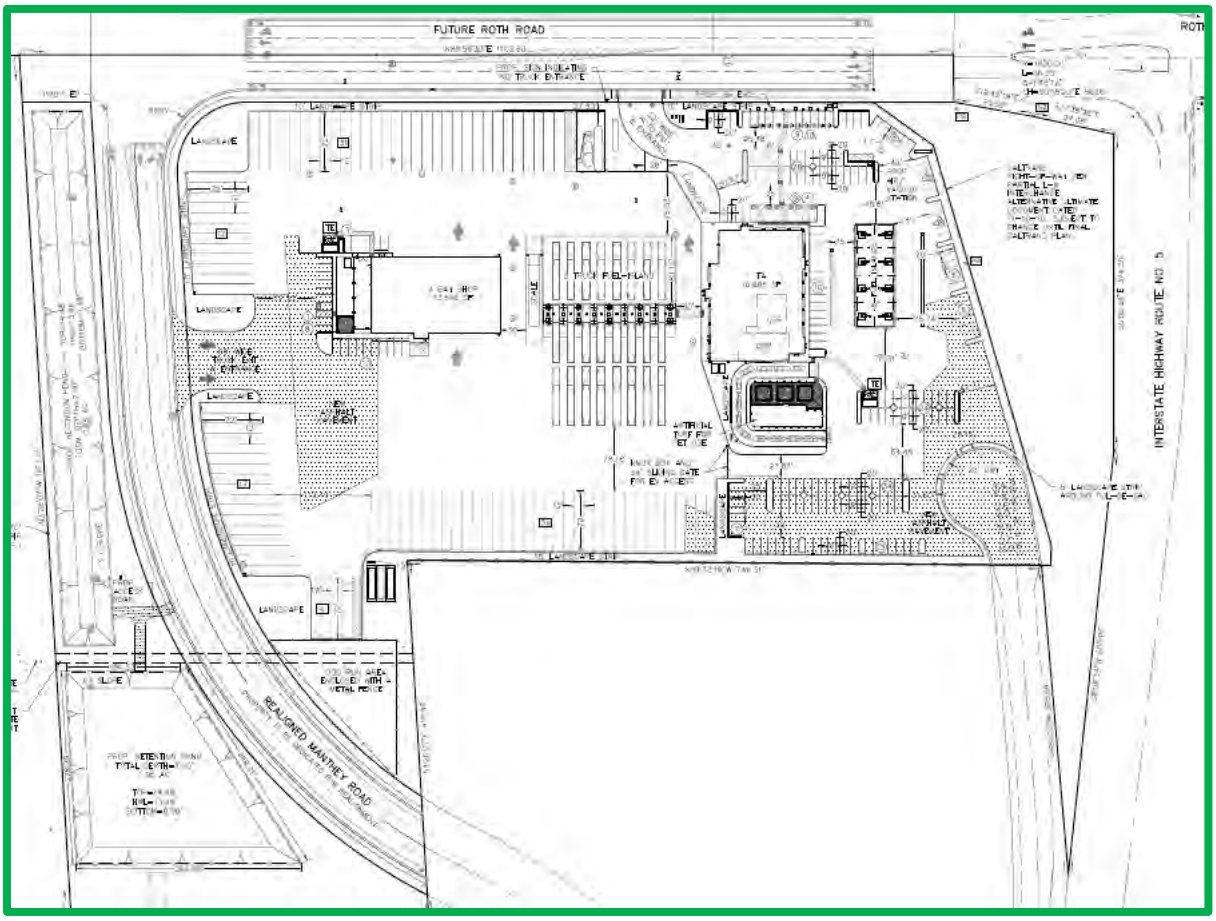
Transportation Analysis Report

The Singh Petroleum Investments Project Transportation Analysis Report - Final



Prepared for:
De Novo Planning Group
City of Lathrop

August 23, 2023

RS22-4159

FEHR PEERS

FEHR PEERS

Table of Contents

List of Figures

List of Tables

1. Introduction

This study addresses potential transportation impacts associated with the proposed Singh Petroleum Investments Project located on the south-west corner of the Roth Road / Manthey Road intersection in the City of Lathrop, California. This Transportation Analysis Report documents the methodologies, inputs, and results of the vehicle miles traveled, passenger vehicle and truck trip generation, intersection operations, safety, and site access.

1.1 Project Description

The Project site includes approximately 19.63 acres located in the north-west area of the City of Lathrop, west of Interstate 5 and south on Roth Road. The Project site is identified as Assessor's Parcel Numbers (APNs) 191-250-14 and 191-250-06, by the San Joaquin County Assessor's Office. The Project site is bounded by Roth Road to the north, Interstate 5 and Manthey Road to the east, and low density / residential / agricultural land to the west and south. **Figure 1** shows the location of the project site.

The proposed Project includes an 8-island (16 position) fueling station for passenger cars and trucks, an 16,668 square foot retail / convenience store that includes a quality sit-down restaurant (QSR) with a drive-thru lane that includes stacking space for up to 12 vehicles, an 8-truck fuel island, and a 13,846 square foot truck service / repair facility. The proposed project would provide a total of 176 regular vehicle parking spaces, seven (7) disables access and 20 compact parking spaces for passenger cars and trucks. As part of the parking supply, a total of nine (9) standard electric vehicle and one (1) van electric vehicle charging stations will be provided. In addition to these passenger vehicle spaces, a total of 98 truck/trailer parking spaces will be provided behind the store building on the west side of the project site.

Under Near-term conditions, access to the project site would be provided via two (2) full-access driveways on Manthey Road, approximately 300 feet and 500 feet south of the Roth Road / Manthey Road intersection. The first driveway would be for passenger vehicles / delivery trucks and the second driveway would be for California (CA) legal and Surface Transportation Assistance Act (STAA) trucks. Two outbound (right-turn only) driveways would be provided on the extension of Roth Road west of Manthey Road, approximately 400 feet and 550 feet west of the Roth Road / Manthey Road intersection. The first driveway would be for passenger vehicles / delivery trucks and the second driveway would be for CA legal STAA trucks. **Figure 2** displays the near-term project site plan and access driveways.

Under Cumulative conditions, access to the project site for passenger vehicles / delivery trucks would be provided via a right-turn in / right-turn out driveway on Roth Road, approximately 400 feet west of the Roth Road / Manthey Road intersection. Access to the project site for CA legal and STAA trucks would be provided on the proposed relocated Manthey Road, approximately 300 feet south of the re-aligned Roth Road / Manthey Road intersection. Lastly, the current Manthey Road would be cul-de-sac'd and not provide any access to the project site. **Figure 3** displays the cumulative project site plan and access driveways.

2. Vehicle Miles Traveled

This chapter describes the significance criteria and the methodology used to evaluate project impacts related to vehicle miles traveled.

2.1 Applicable Policies and Significance Criteria

Vehicle Miles Traveled

Senate Bill (SB) 743 was signed into law in 2013 and resulted in a substantial change in the way transportation impact analyses are being prepared. Notably, it precludes the use of level of service (LOS) to identify significant transportation impacts in CEQA documents for land use projects, with SB 743 recommending that vehicle miles traveled (VMT) be used as the preferred metric.

On December 28, 2018, the CEQA Guidelines were amended to add Section 15064.3, Determining the Significance of Transportation Impacts, which states that generally, VMT is the most appropriate measure of transportation impacts. According to 15064.3(a), "Except as provided in subdivision (b)(2) (regarding roadway capacity), a project's effect on automobile delay shall not constitute a significant environmental impact." Beginning on July 1, 2020, the provisions of 15064.3 applied statewide.

To aid lead agencies with SB 743 implementation, the Governor's Office of Planning and Research (OPR) produced the *Technical Advisory on Evaluating Transportation Impacts in CEQA* (December 2018).[1] The *Technical Advisory* helps lead agencies think about the variety of implementation questions they face with respect to shifting to a VMT metric. However, the guidance is not a recipe for SB 743 implementation; lead agencies must still make their own specific decisions about methodology, thresholds, and mitigation.

The City of Lathrop adopted thresholds of significance and screening criteria for the purpose of analyzing transportation impacts under the California Environmental Quality Act (CEQA) related to vehicle miles Traveled (VMT) on September 20, 2020 and in the City of Lathrop General Plan Update (September 2022) Circulation Element. The methodology and thresholds identified in Attachment 2 in Resolution No. 20-4784 will be applied to the Singh Petroleum Investments Project to determine if the proposed project would result in a CEQA VMT impact.

The City's guidelines identify VMT per employee as the VMT metric for retail / commercial land uses. VMT per retail employee includes VMT associated with trips produced by a proposed project on a typical weekday. The VMT Guidelines also identify a proposed project resulting in a net increase in existing city-wide VMT per employee would indicate a significant transportation impact. This metric reflects the nature of most local-serving retail to distribute existing vehicle trips and serve both pass-by and diverted vehicle trips, rather than generate or inducing all new vehicle trips to and from the project site.

[1] http://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf

2.2 VMT Analysis Methodology

As part of the City of Lathrop General Plan Update project, Fehr & Peers developed the City of Lathrop, Manteca and Ripon Travel Forecasting Model (Three City TFM). The Three City TFM is a modified version of the Three-County RTP/SCS Air Quality Conformity Model, with improvements to all major components (transportation network, land use, and trip-generation rates) focused on this three-city area. Each scenario of the TFM used for VMT forecasting is described below.

Baseline Year (2019) TFM

The Base Year TFM developed for the General Plan Update was used to develop Baseline city-wide average weekday daily VMT per employee for all retail / commercial projects in the City of Lathrop. It should be noted that the use of VMT per employee is the standard methodology used to evaluate potential SB 743 VMT impacts. The Baseline Year TFM incorporates Base Year land use data for dwelling units (single-family and multi-family) and employment (food, retail, office, industrial, medical, government, and school), as well as the roadway network (travel lanes, speed, capacity class), based on Base Year (i.e., 2019) data. The Three City TFM vehicle trip generation rates were derived from the Institute of Transportation Engineer's (ITE) Trip Generation Manual and include inbound/outbound trip generation rates for residential and employment land uses for Daily, AM and PM peak hour conditions.

The Three City TFM was calibrated to reflect more accurate trip distribution for Internal-to-Internal Trips (II), Internal-to-External Trips (IX), External-to-Internal Trips (XI) and External-to-External (XX or Through) Trips based on a combination of the Caltrans Household Travel Survey (CHTS), the American Community Survey (ACS), and California Statewide Model to replicate the majority of vehicle trips traveling to and from the west (Metropolitan San Francisco Bay Area) and a smaller percentage to and from the north (including Stockton and Sacramento) and the smallest percentage to and from the south (I-5 corridor).

The existing (baseline) city-wide average VMT per employee was determined to be 135.3 miles per employee and is based on all types of employment (food, retail, office, industrial, medical, government, and school) in the City of Lathrop.

Cumulative Adopted (September 2022) General Plan Buildout Scenario TFM

The City of Lathrop updated its General Plan, and the Three City TFM was used to estimate the Project's weekday daily home-based VMT per retail employee under cumulative Adopted General Plan Buildout conditions. This scenario of the TFM incorporates land use data (dwelling units and employment) and reflects the City of Lathrop's jobs-housing balance, II, IX, XI, and XX trips under cumulative conditions where the City of Lathrop General Plan is built out.

This scenario also incorporates roadway network (lanes, speed, capacity class) based on the adopted City of Lathrop General Plan, the City of Lathrop Capital Improvement Program (CIP), and the San Joaquin Council of Government (SJCOG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) Project List.

The cumulative (general plan) city-wide average VMT per employee was determined to be 211.5 miles per employee and is based on all types of employment (food, retail, office, industrial, medical, government, and school) in the City of Lathrop.

2.3 VMT Impact Analysis

As discussed earlier in this chapter, the proposed Project would result in a significant transportation impact if the proposed project would result in a net increase in Baseline (existing) Lathrop city-wide VMT by employee or Cumulative Lathrop city-wide VMT by employee.

Table 1 presents the established city-wide VMT and the Project generated VMT under baseline and cumulative conditions. VMT generated by the Project is compared to the baseline city-wide average VMT per employee. As discussed in Chapter 5, the proposed Singh Petroleum Investments Project would result in a combination of net new, pass-by and diverted vehicle trips and associated VMT per employee.

The definition of net new trips are vehicle trips that have the sole purpose of traveling to and from the proposed project from either home or work and represent approximately 20% of the daily VMT.

The definition of pass-by trips are vehicle trips that are already on Manthey Road and decide to stop at the proposed project and represent approximately 15% of the daily VMT.

The definition of diverted trips are vehicle trips that are already on Interstate 5 and decide to stop at the proposed project and represent approximately 65% of the daily VMT.

Table 1: Vehicle Miles Traveled (VMT) Analysis – Project-Generated VMT

Scenario	VMT per Retail Employee	Compared to Baseline City-wide Average Without Singh Petroleum Investments Project
Existing (Baseline) City-wide Average	135.3	-
Singh Petroleum Investments Project – Existing (Baseline) Conditions Net New Trips – 20% - VMT of 135.3 miles per retail employee Pass-By Trips – 15% - VMT of 0.2 miles from Manthey Road Diverted Trips – 65% - VMT of 1.1 miles from I-5	27.8	- 79.5%
Cumulative Lathrop General Plan Update	211.5	
Singh Petroleum Investments Project - Cumulative Lathrop General Plan Update Net New Trips – 20% - VMT of 195.2 miles per retail employee Pass-By Trips – 15% - VMT of 0.2 miles from Manthey Road Diverted Trips – 65% - VMT of 1.1 miles from I-5	43.1	- 79.6%

Source: City of Lathrop Travel Demand Model - Fehr & Peers, 2023

As displayed, under Existing (Baseline) Conditions, based on the type of project that includes a combination of net new, pass-by and diverted vehicle trips, the proposed Project would generate an estimated average of 27.8 VMT per employee, which is 79.5% below the baseline city-wide average.

The Adopted (September 2022) General Plan Update includes a substantial increase in both employment and retail land uses, which would allow residents to travel shorter distances to access jobs and local services without the need to travel outside of the City of Lathrop. To complement this increase in employment, the City of Lathrop General Plan also includes a substantial increase in residential projects (single-family and multi-family dwelling units) that would complement the employment and retail land uses by supplying workers (employees) and patrons (shoppers) to businesses. The improved jobs-housing balance under the cumulative scenario is consistent with the City's vision for future development of providing local services for a growing population.

Under Cumulative Adopted General Plan Buildout conditions, based on the type of project that includes a combination of net new, pass-by and diverted vehicle trips, the Project would generate an estimated average of 43.1 VMT per employee, which is 79.6% below the cumulative city-wide average.

Therefore, because the proposed project would generate VMT per employee that is less than existing city-wide VMT by employee or cumulative city-wide VMT by employee, the VMT impact of the proposed Singh Petroleum Investments Project would be less-than-significant.

3. Intersection Operations Analysis

This chapter describes the significance criteria and methodology used to analyze the study intersections identified below, and methodology used to develop traffic forecasts for study intersections.

3.1 Study Area

The study area was selected based on the Project's location, site access, and anticipated trip distribution and assignment to the surrounding transportation system. The analysis considers traffic operations at the following intersections, which are displayed in Figure 1.

Study Intersections

1. Manthey Road / Roth Road;
2. Southbound Interstate 5 On/Off-Ramps / Roth Road;
3. Northbound Interstate 5 On/Off-Ramps / Roth Road; and
4. Harlan Road / Roth Road.

Study Scenarios

The study intersections were evaluated for the following four scenarios:

- **Existing Conditions** – Analyzes operations as they exist today (Spring 2023).
- **Existing Plus Project Conditions** – Analyzes existing operations with the addition of trips generated by the proposed Singh Petroleum Investments Project. The Base Year TFM developed for the General Plan Update was used to develop project trip distribution during the AM peak hour and PM peak hour.
- **Cumulative No Project Conditions** - Analyzes Year 2040 volumes based on the City of Lathrop. Manteca, and Ripon Travel Forecasting Model (Three City TFM), assuming the project site remains in its current undeveloped state.
- **Cumulative Plus Project Conditions** – Analyzes Year 2040 volumes with the addition of trips generated by the proposed Singh Petroleum Investments Project.

3.2 Data Collection

Traffic count data at the four (4) study intersections was collected by the City of Lathrop for their Traffic Monitoring Program and provided for use as Existing weekday morning (AM) and evening (PM) peak hour turning movement volumes. Intersection turning movement counts were conducted during the AM (7:00 to 9:00) and PM (4:00 to 6:00) peak periods. **Figure 4** displays the existing weekday AM and PM peak hour intersection turning movement counts at the study intersections.

Peak Hour Traffic Volumes and Lane Configurations - Existing Conditions

3.3 Analysis Methodology

Level of Service

Study intersections were analyzed using procedures and methodologies contained in the Highway Capacity Manual – 7th Edition (Transportation Research Board, 2022). These methodologies were applied using Synchro/SimTraffic 11 software which considers traffic volumes, lane configurations, intersection control type, signal timings (as applicable), and other pertinent parameters of intersection operations.

As previously noted, Level of Service (LOS) may no longer be used to identify significant transportation impacts in CEQA documents for land use projects. However, this analysis includes an LOS analysis to determine if the proposed project would result in deficient intersection operations per the City of Lathrop standards. Policy CIR-1.3 of the 2022 General Plan strives for LOS D or better within the City, except where maintaining such levels of service is infeasible.

LOS is a qualitative measure of traffic operating conditions whereby a letter grade, from A (the best) to F (the worst), is assigned. These grades represent the perspective of drivers and are an indication of the comfort and convenience associated with driving. In general, LOS A represents free-flow conditions with no congestion, and LOS F represents severe congestion and delay under stop-and-go conditions. For signalized intersections, roundabouts and all way stop control intersections, LOS is based on the average delay experienced by all vehicles passing through the intersection. For side-street stop-controlled intersections, the delay and LOS for the overall intersection is reported along with the delay for the stop controlled movements. **Table 2** displays the delay range associated with each LOS category for signalized and unsignalized intersections.

Table 2: Intersection Level of Service (LOS) Criteria			
LOS	**Description (for Signalized Intersections)**	**Average Delay (Seconds/Vehicle) at Signalized Intersections**	**Average Delay (Seconds/Vehicle) at Unsignalized Intersections**
A	Operations with very low delay occurring with favorable traffic signal progression and/or short cycle lengths.	< 10.0	< 10.0
B	Operations with low delay occurring with good progression and/or short cycle lengths.	> 10.0 to 20.0	> 10.0 to 15.0
C	Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	> 20.0 to 35.0	> 15.0 to 25.0
D	Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	> 35.0 to 55.0	> 25.0 to 35.0
E	Operations with high delay values indicating poor progression, and long cycle lengths. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	> 55.0 to 80.0	> 35.0 to 50.0
F	Operations with delays unacceptable to most drivers occurring due to over-saturation, poor progression, or very long cycle lengths.	> 80.0	> 50.0
Note: LOS = level of service; V/C ratio = volume-to-capacity ratio Source: Transportation Research Board, 2022			

Traffic Volume Forecasting

Existing (Base Year) Three City Travel Forecasting Model

The Existing (Base Year) Three City TFM developed for the General Plan Update, as described in Chapter 2, was used to develop trip distribution under Existing Plus Project conditions. The traffic forecasting adjustment procedure known as the "difference method" was used to develop Cumulative No Project conditions AM and PM peak hour traffic forecast.

For a given intersection, this forecasting procedure is calculated as follows for every movement at the study intersections:

Cumulative Year No Project Forecast =
Existing Volume + (Year 2040 TFM Volume – Existing (Base Year) TFM Volume)

Approved General Plan Update (Year 2040) Scenario TFM

The Approved General Plan Update (Year 2040) TFM was developed based on projected future land use and transportation network for the City of Lathrop and adjacent City of Manteca and City of Ripon. Similar to other cities in the Central Valley region, the City of Lathrop is projecting major growth for both housing (population) and employment (jobs) in the General Plan Buildout scenario. The Year 2040 model scenario was developed in coordination with both the City of Lathrop and City of Manteca to ensure that the TFM represents market-based demand for future growth in both housing (population) and employment (jobs), and therefore does not underestimate or overestimate traffic demand volumes.

The City of Lathrop 2040 land use inputs were developed based on the City of Lathrop's approved and anticipated projects that will be constructed and occupied by year 2040. The City of Manteca 2040 land use inputs was also developed based on the City of Manteca's approved and anticipated projects that will be constructed and occupied by year 2040.

The Approved General Plan Update (Year 2040) 2040 TFM was updated to reflect the proposed Singh Petroleum Investments Project and two other projects located south of the Manthey Road / Roth Road intersection. The traffic forecasting adjustment procedure known as the "difference method" was used to develop Year 2040 AM and PM peak hour traffic forecasts.

For a given intersection, this forecasting procedure is calculated as follows for every movement at the study intersections:

Cumulative Year With Project Forecast =
Existing Volume + (Year 2040 TFM Volume – Existing (Base Year) TFM Volume)

4. Existing Conditions

This chapter presents the existing bicycle, pedestrian, and transit facilities and intersection operations under Existing Conditions.

4.1 Existing Bicycle and Pedestrian Facilities

The following sections define bicycle facility types:

Class I Bikeway: Bike Path

Bike paths, often referred to as shared-use paths or trails, are off-street facilities that provide exclusive use for non-motorized travel, including bicyclists and pedestrians. Bike paths have minimal cross flow with motorists and are typically located along landscaped corridors.

Class II Bikeway: Bike Lane

Class II bike lanes are on-street facilities that use striping, stencils, and signage to denote preferential or exclusive use by bicyclists. On-street bike lanes are located adjacent to motor vehicle traffic.

Class III Bikeway: Bike Route

Class III bike routes are streets with signage and optional pavement markings where bicyclists travel on the shoulder or share a lane with motor vehicles. Class III bike routes are utilized on low-speed and low-volume streets to connect bike lanes or paths along corridors that do not provide enough space for dedicated lanes.

Class III Bikeway: Bicycle Boulevard

Class III bicycle boulevards are similar to Class III bike routes, in that they are primarily utilized on low-speed and low-volume streets, and can close important gaps in the bicycle network where there may be insufficient space for dedicated lanes. Bicycle boulevards provide further enhancements to bike routes to encourage slow speeds and discourage non-local vehicle traffic via traffic diverters, chicanes, traffic circles, and/or speed tables.

Class IV Bikeway: Separated Bikeway

Class IV separated bikeways, commonly known as cycle tracks, are physically separated bicycle facilities that are distinct from the sidewalk and designed for exclusive use by bicyclists. They are located within the street right-of-way, but provide comfort similar to Class I bike paths.

Pedestrian facilities include sidewalks along roadways, crosswalks at intersections, and pedestrian push buttons and pedestrian signal timings at signalized intersections.

There are currently no bicycle or pedestrian facilities on Manthey Road, Roth Road, or Harlan Road in the project study area.

4.2 Existing Transit Service and Facilities

Route 90 connects Lathrop to Stockton and Tracy with service weekdays, once in the morning and once in the afternoon both northbound and southbound. A stop is provided on Louise Avenue at Harlan Road and 5th Street at the Lathrop Community Center.

Route 150 provides commuter service from Lathrop to the Dublin/Pleasanton BART station with seven departures every day. One stop is provided at the Crossroads Shopping Center on Harlan Road south of Lathrop Road.

Van Go! on-demand rideshare service provides travel anywhere withing the county with a 48-hour reservation from 8 AM to 5 PM seven days a week.

There is currently no local or regional transit stop in the vicinity of the project site.

4.3 Existing Intersection Operations

Table 3 displays the existing AM and PM peak hour operations at the study intersections. Technical calculations are displayed in **Appendix A**.

Table 3: Intersection Operations – Existing Conditions

Intersection	Control Type	AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS
1. Manthey Road / Project Driveway #2 Roth Road	SSSC	4.7 (WB LT) 0.8 (WB RT) 1.8 (Entire)	A A A	6.1 (WB LT) 1.1 (WB RT) 1.8 (Entire)	A A A
2. SB I-5 On/Off-Ramps / Roth Road	SSSC	11.2 (SB LT) 3.8 (SB RT) 5.6 (Entire)	B A A	10.5 (SB LT) 3.8 (SB RT) 5.1 (Entire)	B A A
3. NB I-5 On/Off-Ramps / Roth Road	SSSC	9.8 (NB LT) 5.1 (NB RT) 2.9 (Entire)	A A A	11.2 (NB LT) 12.5 (NB RT) 5.1 (Entire)	B B A
4. Harlan Road / Roth Road	AWSC	10.7	B	26.2	C

Notes:
Bold indicates deficient operations.
SSSC = Side-Street Stop Control AWSC = All-Way Stop Control
Source: Fehr & Peers, 2023

Under both Existing AM and PM Peak Hour Conditions, all three (3) side-street stop controlled intersections operate at acceptable LOS A or B conditions. The all-way stop controlled Harlan Road / Roth Road intersection operates at acceptable LOS B conditions during Existing AM Peak Hour Conditions, and acceptable LOS C conditions during Existing PM Peak Hour Conditions.

5. Existing Plus Project Conditions

This chapter presents the results of trip generation, distribution of traffic and intersection operations analysis under Existing Plus Project conditions.

5.1 Project Trip Generation

The Project's trip generation was estimated using trip rates published in the *Trip Generation Manual 11th Edition* (Institute of Transportation Engineers, 2021). **Table 4** displays the estimated gross total number of Daily (4,576 vehicle trips), AM peak hour (208 vehicle trips), and PM peak hour (280 vehicle trips) that are comprised of passenger cars/trucks and California legal and STAA trucks for the proposed Singh Petroleum Investments Project. It should be noted that Table 4 includes an approximately 24% internalization rate, which is defined as the percentage of customers that would purchase both gas/diesel and food, snacks, coffee, etc. in the retail store.

Table 4: Summary of Project Trip Generation

Land Use	Quantity	Daily	AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total
Retail Commercial (ITE Land Use Code 822)	16,688 square feet	728	44	22	22	58	29	29
Gasoline Pumps / Service Station (ITE Land Use Code 944)	16 Fueling Positions	2,064	124	62	62	166	83	83
Diesel Pumps / Service Station (ITE Land Use Code 944)	8 Fueling Positions	516	30	15	15	42	21	21
Truck Repair (ITE Land Use Code 943)	13,846 square feet	182	10	5	5	14	7	7
Total		3,490	208	104	104	280	140	140

Notes:
Trip generation is based on trip rates published in *Trip Generation Manuel 11th Edition* (Institute of Transportation Engineers, 2021).
Source: Fehr & Peers, 2023

Table 5 displays the estimated net new, pass-by and diverted number of peak hour vehicle trips (passenger cars/trucks and California legal and STAA trucks) for the proposed Singh Petroleum Investments Project for Weekday Daily (24 Hour) Conditions. The definition of net new trips are vehicle trips that have the sole purpose of traveling to and from the proposed project from either home or work and represent approximately 20% of the daily trip generation.

The definition of pass-by trips are vehicle trips that are already on Manthey Road and decide to stop at the proposed project and represent approximately 15% of the daily trip generation.

The definition of diverted trips are vehicle trips that are already on Interstate 5 and decide to stop at the proposed project and represent approximately 65% of the daily trip generation.

Table 5: Daily (24 Hour) Project Trip Generation

Land Use	Net New Trips			Pass-By Trips (Vehicles on Manthey Road)			Diverted Trips (Vehicles on Interstate 5)		
	In	Out	Total	In	Out	Total	In	Out	Total
Retail Commercial (ITE Land Use Code 822)	72	72	144	55	55	110	236	236	472
Gasoline Pumps / Service Station (ITE Land Use Code 944)	206	206	412	155	155	310	671	671	1,342
Diesel Pumps / Service Station (ITE Land Use Code 944)	52	52	104	39	39	78	168	168	336
Truck Repair (ITE Land Use Code 943)	18	18	36	14	14	28	59	59	118
Total Passenger Cars and Trucks	278	278	556	210	210	420	907	907	1,814
Total CA Legal and STAA Trucks	70	70	140	53	53	106	227	227	454
Total Vehicles	349	349	696	263	263	526	1,134	1,134	2,268

Notes:
Trip generation is based on trip rates published in *Trip Generation Manuel 11th Edition* (Institute of Transportation Engineers, 2021).
Source: Fehr & Peers, 2023

Table 6 displays the estimated net new, pass-by and diverted number of peak hour vehicle trips (passenger cars/trucks and California legal and STAA trucks) for the proposed Singh Petroleum Investments Project for AM Peak Hour Conditions.

The definition of net new trips are vehicle trips that have the sole purpose of traveling to and from the proposed project from either home or work, resulting in 44 vehicle trips (21% of all trips generated).

The definition of pass-by trips are vehicle trips that are already on Manthey Road and decide to stop at the proposed project, resulting in 30 vehicle trips (14% of all trips generated).

The definition of diverted trips are vehicle trips that are already on Interstate 5 and decide to stop at the proposed project, resulting in 134 vehicle trips (65% of all trips generated).

Table 6: AM Peak Hour Project Trip Generation

Land Use	Net New Trips			Pass-By Trips (Vehicles on Manthey Road)			Diverted Trips (Vehicles on Interstate 5)		
	In	Out	Total	In	Out	Total	In	Out	Total
Retail Commercial (ITE Land Use Code 822)	5	5	10	3	3	6	14	14	28
Gasoline Pumps / Service Station (ITE Land Use Code 944)	13	13	26	9	9	18	40	40	80
Diesel Pumps / Service Station (ITE Land Use Code 944)	3	3	6	2	2	4	10	10	20
Truck Repair (ITE Land Use Code 943)	1	1	2	1	1	2	3	3	6
Total	22	22	44	15	15	30	67	67	134

Notes:
Trip generation is based on trip rates published in *Trip Generation Manuel 11th Edition* (Institute of Transportation Engineers, 2021).
Source: Fehr & Peers, 2023

Table 7 displays the estimated net new, pass-by and diverted number of peak hour vehicle trips (passenger cars/trucks and California legal and STAA trucks) for the proposed Singh Petroleum Investments Project for PM Peak Hour Conditions.

The definition of net new trips are vehicle trips that have the sole purpose of traveling to and from the proposed project from either home or work, resulting in 56 vehicle trips (20% of all trips generated).

The definition of pass-by trips are vehicle trips that are already on Manthey Road and decide to stop at the proposed project, resulting in 40 vehicle trips (14% of all trips generated).

The definition of diverted trips are vehicle trips that are already on Interstate 5 and decide to stop at the proposed project, resulting in 184 vehicle trips (66% of all trips generated).

Table 7: PM Peak Hour Project Trip Generation

Land Use	Net New Trips			Pass-By Trips (Vehicles on Manthey Road)			Diverted Trips (Vehicles on Interstate 5)		
	In	Out	Total	In	Out	Total	In	Out	Total
Retail Commercial (ITE Land Use Code 822)	6	6	12	4	4	8	19	19	38
Gasoline Pumps / Service Station (ITE Land Use Code 944)	17	17	34	12	12	24	54	54	108
Diesel Pumps / Service Station (ITE Land Use Code 944)	4	4	8	3	3	6	14	14	28
Truck Repair (ITE Land Use Code 943)	1	1	2	1	1	2	5	5	10
Total	28	28	56	20	20	40	92	92	184

Notes:
Trip generation is based on trip rates published in *Trip Generation Manuel 11th Edition* (Institute of Transportation Engineers, 2021).
Source: Fehr & Peers, 2023

5.2 Project Trip Distribution

Project trips were distributed throughout the study area based on the existing and future transportation system, directional travel patterns entering and exiting driveways serving the project site, and output from the Existing Base Year TFM and Cumulative Year TFM. **Figure 5** presents project trip distribution. It should be noted that California legal and STAA trucks are prohibited from using Golden Valley Parkway, Spartan Road and the I-5 / Lathrop Road interchange. Therefore, California legal and STAA trucks are required to use Manthey Road and the I-5 / Roth Road interchange and the pass-by, diverted and net new trip distribution for project-generated traffic includes this requirement for California legal and STAA trucks. The primary results of the trip distribution analysis are:

- The majority of project-generated traffic are diverted trips to and from I-5 and represent 66% of all trips (with 33% from northbound I-5 and 33% from southbound I-5);
- For net new trips, they represent 20% of all trips (with 10% from Harlan Road south of Roth Road, 9 % from Roth Road east of Harlan Road and 1% from Harlan Road north of Roth Road); and
- The remaining 14% are pass-by trips already on Manthey Road that decide to stop at the proposed project.

Figure 6 displays the traffic volumes under Existing Plus Project conditions for the following study intersections:

1. Manthey Road / Roth Road;
2. Southbound Interstate 5 On/Off-Ramps / Roth Road;
3. Northbound Interstate 5 On/Off-Ramps / Roth Road;
4. Harlan Road / Roth Road;
5. Manthey Road / Project Driveway.

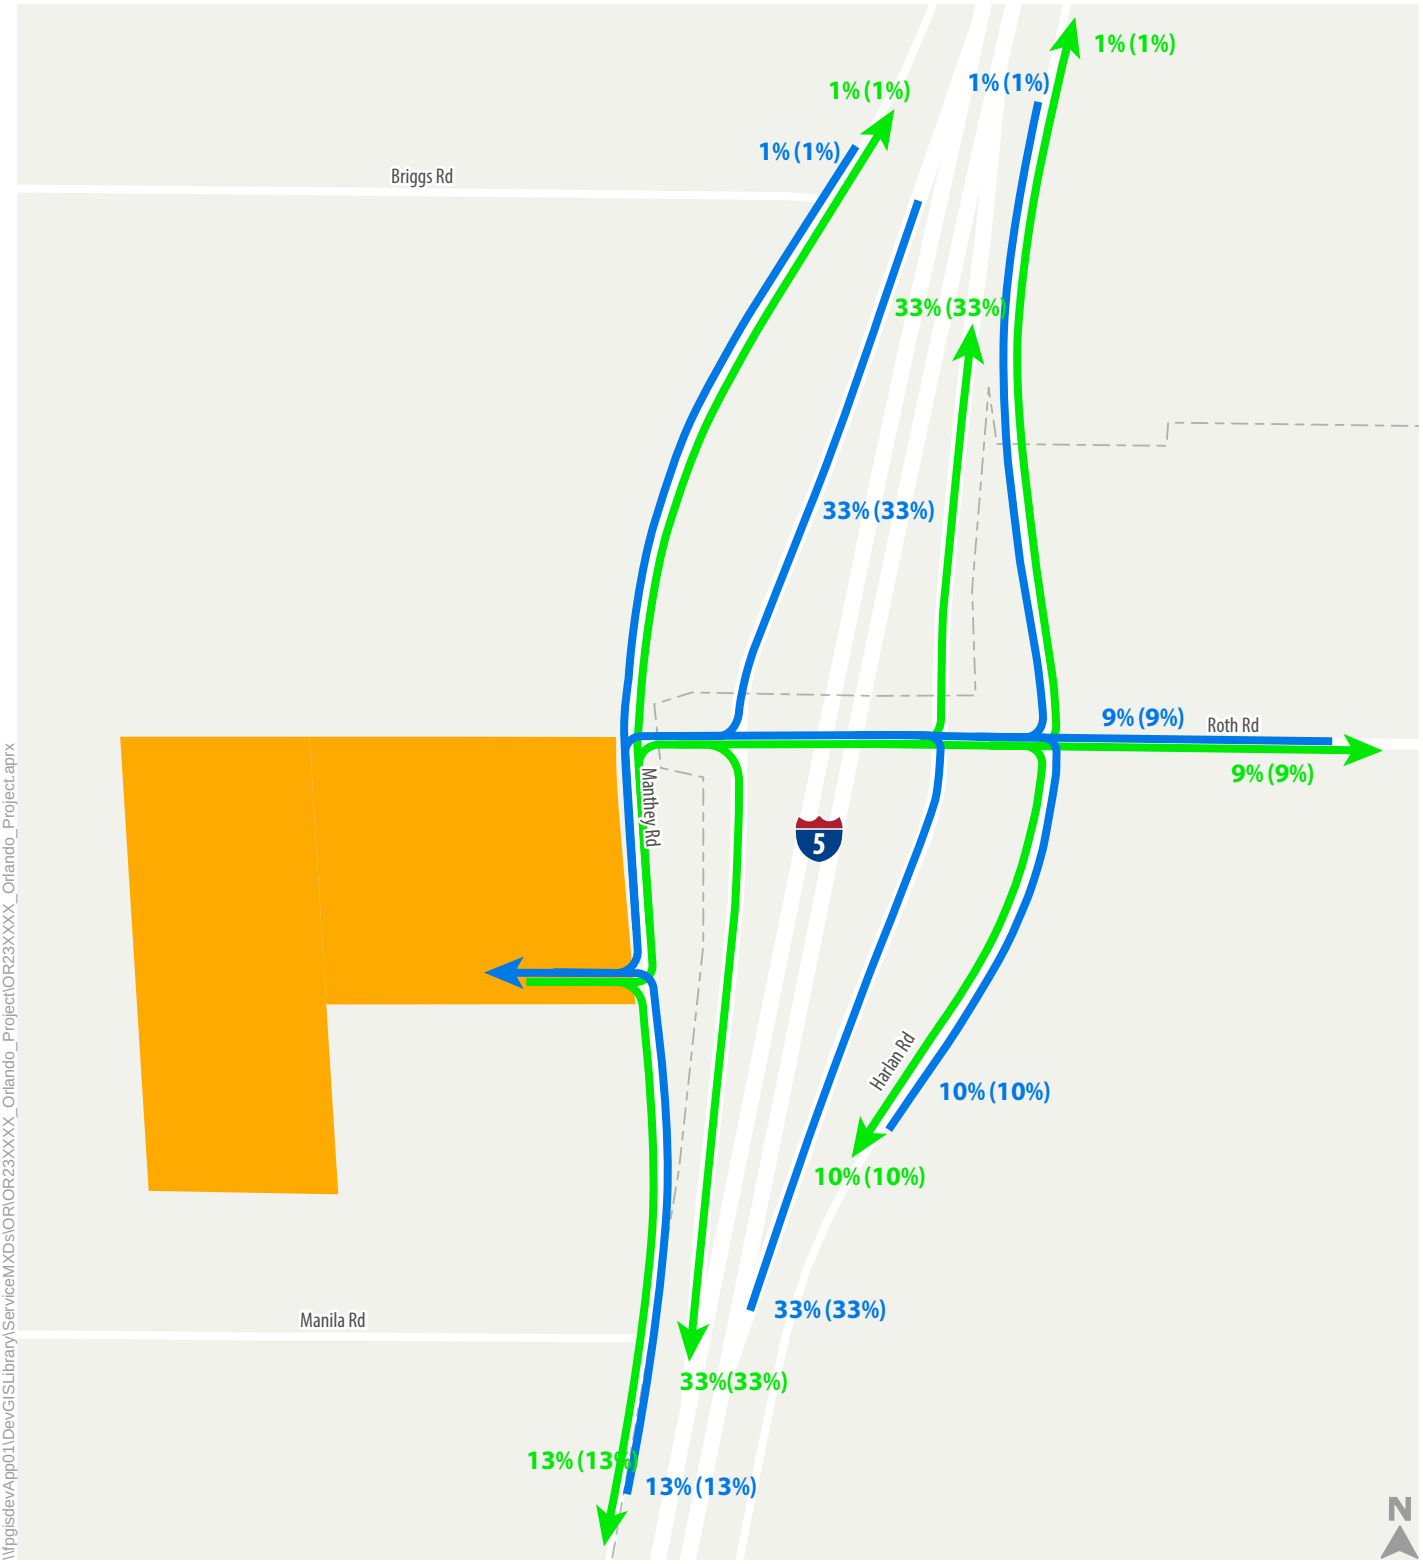

Figure 5

Project Trip Distribution

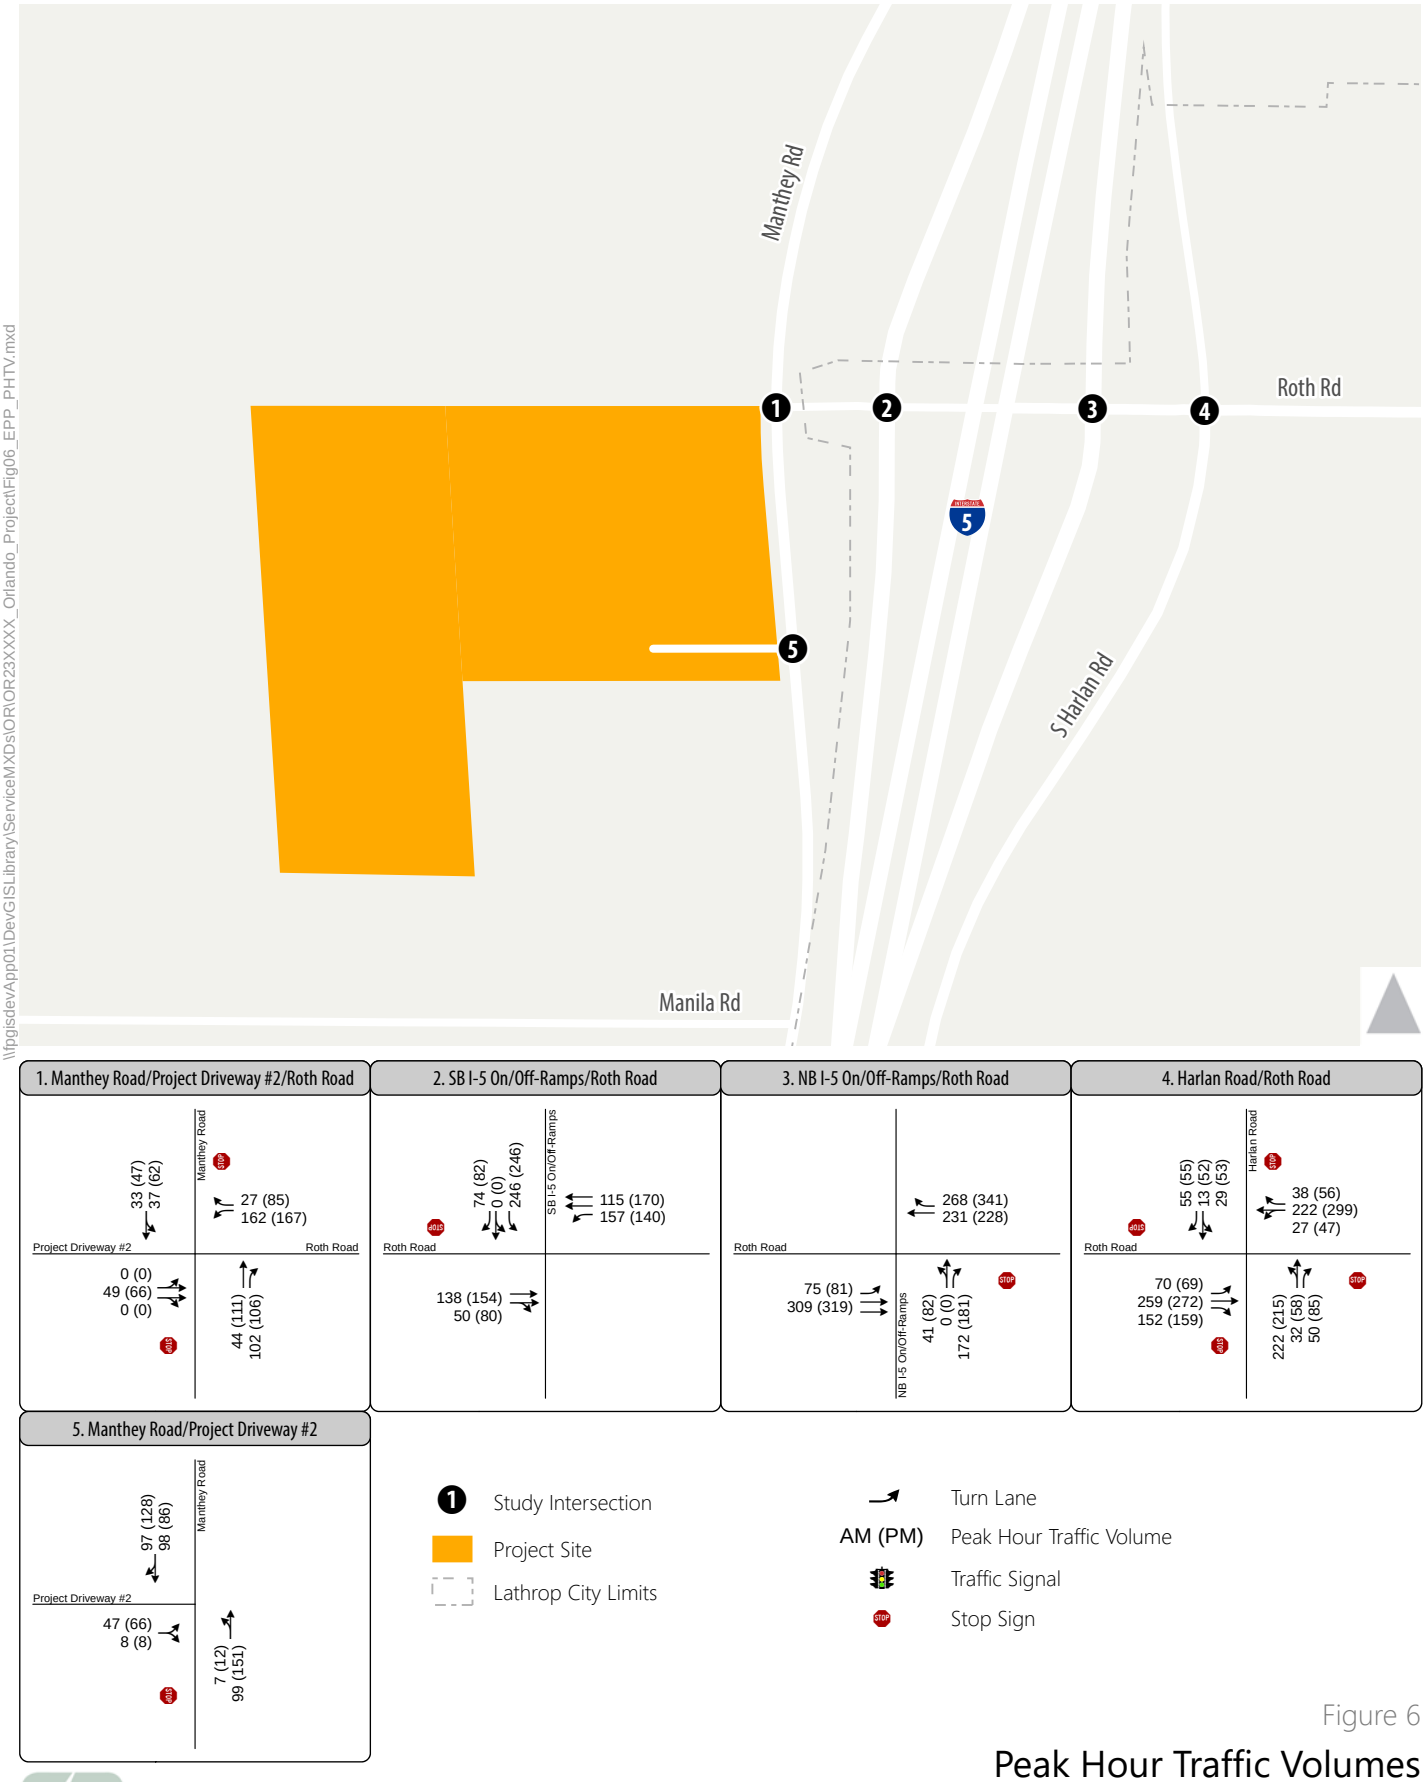

Figure 6

Peak Hour Traffic Volumes and Lane Configurations - Existing Plus Project Conditions

5.3 Existing Plus Project Intersection Operations

Under Near-term conditions, access to the project site would be provided via two (2) full-access driveways on Manthey Road, approximately 300 feet and 500 feet south of the Roth Road / Manthey Road intersection. The first driveway would be for passenger vehicles / delivery trucks and the second driveway would be for California (CA) legal and Surface Transportation Assistance Act (STAA) trucks. Two outbound (right-turn only) driveways would be provided on the extension of Roth Road west of Manthey Road, approximately 400 feet and 550 feet west of the Roth Road / Manthey Road intersection. The first driveway would be for passenger vehicles / delivery trucks and the second driveway would be for CA legal STAA trucks. **Table 8** displays the AM peak hour intersection operations under Existing Plus Project conditions. Technical calculations are displayed in **Appendix B**.

Table 8: Intersection Operations – Existing Plus Project AM Peak Hour Conditions

Intersection	Control Type	Existing Conditions		Existing Plus Project Conditions	
		AM Peak Hour		AM Peak Hour	
		Delay	LOS	Delay	LOS
1. Manthey Road / Project Driveway #2 Roth Road	SSSC	4.7 (WB LT) 0.8 (WB RT) 1.8 (Entire)	A A A	6.8 (EB TH) 5.8 (WB LT) 0.8 (WB RT) 3.3 (Entire)	A A A A
2. SB I-5 On/Off-Ramps / Roth Road	SSSC	11.2 (SB LT) 3.8 (SB RT) 5.6 (Entire)	B A A	14.0 (SB LT) 4.7 (SB RT) 6.0 (Entire)	B A A
3. NB I-5 On/Off-Ramps / Roth Road	SSSC	9.8 (NB LT) 5.1 (NB RT) 2.9 (Entire)	A A A	15.0 (NB LT) 5.5 (NB RT) 3.5 (Entire)	B A A
4. Harlan Road / Roth Road	AWSC	10.7	B	11.4	B
5. Manthey Road / Project Driveway #1	SSSC	Intersection does not exist in this scenario		5.3 (EB LT) 3.3 (EB RT) 1.8 (Entire)	A A A

Notes:
Bold indicates deficient operations.
SSSC = Side-Street Stop Control AWSC= All-Way Stop Control
Source: Fehr & Peers, 2023

Under Existing Plus Project AM Peak Hour Conditions, all three (3) side-street stop controlled intersections would continue to operate at acceptable LOS A or B conditions . The all-way stop controlled Harlan Road / Roth Road intersection would also continue to operate at acceptable LOS B conditions during Existing Plus Project AM Peak Hour Conditions. The new Manthey Road / Project Driveway #1 driveway intersection would also operate at LOS A conditions as passenger cars and trucks enter and exit the project site.

Table 9 displays the PM peak hour intersection operations under Existing Plus Project conditions. Technical calculations are displayed in **Appendix B**.

Table 9: Intersection Operations – Existing Plus Project PM Peak Hour Conditions					
Intersection	**Control Type**	**Existing Conditions**		**Existing Plus Project Conditions**	
		PM Peak Hour		**PM Peak Hour**	
		Delay	**LOS**	**Delay**	**LOS**
1. Manthey Road / Project Driveway #2 Roth Road	SSSC	6.1 (WB LT) 1.1 (WB RT) 1.8 (Entire)	A A A	9.0 (EB TH) 8.5 (WB LT) 1.1 (WB RT) 4.0 (Entire)	A A A A
2. SB I-5 On/Off-Ramps / Roth Road	SSSC	10.5 (SB LT) 3.8 (SB RT) 5.1 (Entire)	B A A	15.8 (SB LT) 5.4 (SB RT) 6.3 (Entire)	B A A
3. NB I-5 On/Off-Ramps / Roth Road	SSSC	11.2 (NB LT) 12.5 (NB RT) 5.1 (Entire)	B B A	20.0 (NB LT) 8.9 (NB RT) 5.3 (Entire)	C A A
4. Harlan Road / Roth Road	Signal	26.2	C	30.0	C
5. Manthey Road / Project Driveway #2	SSSC	Intersection does not exist in this scenario		5.7 (EB LT) 3.7 (EB RT) 2.0 (Entire)	A A A
Notes: **Bold** indicates deficient operations. SSSC = Side-Street Stop Control Source: Fehr & Peers, 2023					

Under Existing Plus Project PM Peak Hour Conditions, all three (3) side-street stop controlled intersections would continue to operate at acceptable LOS A/B/C conditions . The signalized Harlan Road / Roth Road intersection would also continue to operate at acceptable LOS C conditions during Existing Plus Project PM Peak Hour Conditions. The new Manthey Road / Project Driveway #1 driveway intersection would also operate at LOS A conditions as passenger cars and trucks enter and exit the project site. Based on results of the intersection operations analysis, review of the site plan, and adjacent land uses on Manthey Road, the following Conditions of Approval (COA) are recommended.

Traffic COA #1 – The proposed project will coordinate with the City of Lathrop Public Works Department to construct the fourth (west) leg of the Manthey Road / Roth Road intersection and modify the intersection from a side-street stop controlled to an all-way stop controlled intersection.

Traffic COA #2 – The proposed project will coordinate with the City of Lathrop Public Works Department to ensure access and egress from the existing driveway / house located directly south of the proposed full access driveway on the current alignment of Manthey Road is maintained and adequate site distance is provided.

6. Cumulative Conditions Analysis

This chapter presents the results of intersection operations analysis under Cumulative (Year 2040) conditions. The analysis reflects long-term development in the City of Lathrop and other nearby jurisdictions using the General Plan Three City TFM previously described in Chapters 2 and 3. The Cumulative Year analysis assumes the following improvements:

- Interstate 5 / Roth Road interchange – In the 2022 SJCOG Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) Document, the I-5 at Roth Road interchange (Project SJ11-2004) would be modified to provide operational (traffic signals) and capacity (through lanes and turn pockets) improvements to serve projected traffic volumes from the City of Lathrop, City of Manteca, San Joaquin County, and City of Stockton. The City of Lathrop is coordinating with SJCOG to identify the timeline for construction of the improvements, opening year and funding sources.

- Roth Road Corridor Study – The San Joaquin Council of Governments (SJCOG), in collaboration with San Joaquin County, the City of Lathrop, and the City of Manteca are conducting a study to prioritize system improvements to address critical multimodal travel needs within the greater Roth Road Corridor. The improvement package will accommodate growing truck traffic served by Roth Road, which is a primary route to access Interstate 5 (I-5). This includes the expansion of the Union Pacific Intermodal Facility that will nearly triple daily average truck round trips. The Defense Depot of San Joaquin Sharp Facility and CenterPoint also contribute significant truck traffic. There are several at-grade rail crossings along Roth Road that will experience heavier truck volumes, and have higher rail activity. The purpose of the Study is to identify traffic improvements to the Roth Road Corridor. The Study is currently being drafted and being reviewed by the participating agencies.

- Harlan Road Realignment Project (East of Interstate 5) - The proposed City of Lathrop project will realign Harlan Road 600' east of the current intersection with Roth Road to provide more space between Interstate 5 (I-5) and the intersection of Harlan Road and Roth Road. This realignment will also include a traffic signal at the intersection as well as accommodate future interchange improvements. The Precise Plan will include three (3) travel lanes and a center two-way left turn lane south of Roth Road and two (2) travel lanes with a center striped median north of Roth Road. The existing Harlan Road intersection will be converted to a cul-de-sac on the south side and a dead-end on the north side of Roth Road. Access will be maintained to the existing properties on Harlan Road. The Harlan Road Realignment Project is part of the City's Capital Improvement Plan (CIP) (CIP PS 14-04) and is partially funded via City Impact Fees, including the North Lathrop Transportation Impact fee (NLTIF). The Precise Plan and associated Initial Study / Mitigated Negative Declaration was approved by Lathrop's City Council on March 8, 2021.

- Manthey Road Realignment. The City of Lathrop project will realign Manthey Road west and provide more space between Interstate 5 (I-5) and the intersection of Manthey Road and Roth Road to accommodate future interchange improvements. The Precise Plan has not been adopted and funding is uncertain for this project.

6.1 Cumulative No Project Intersection Operations

Cumulative no project forecasts for this study were developed by subtracting project trips from the "plus project" scenario. As discussed in the previous section, the City of Lathrop is coordinating with SJCOG to identify the timeline for construction of the improvements, opening year and funding sources. Therefore, the I-5 / Roth Road interchange was analyzed as an improved tight diamond interchange with the following intersection control options:

- Side-street stop control for both the NB and SB I-5 ramp terminal intersections;
- All-way stop control for both the NB and SB I-5 ramp terminal intersections; and
- Signal control for both the NB and SB I-5 ramp terminal intersections.

Figure 7 display AM and PM peak hour turning movements and lane configurations at the study intersections under Cumulative No Project conditions with side-street stop control for both the NB and SB I-5 ramp terminal intersections. **Table 10** displays the AM and PM peak hour Cumulative No Project intersection operations side-street stop-controlled I-5 / Roth Road interchange. Technical calculations are displayed in **Appendix C**.

Table 10: Intersection Operations – Cumulative No Project Conditions

Intersection	Control Type	AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS
1. Manthey Road / Roth Road	Signal	13.9	B	16.3	B
2. SB I-5 On/Off-Ramps / Roth Road	SSSC	**>350 (SB LT)** **> 120 (SB RT)** **> 120 (Entire)**	**F** **F** **F**	18.0 (EB TH) 10.3 (EB RT) **87.2 (WB LT)** 15.3 (WB TH) 17.8 (SB LT) 11.2 (SB RT) 34.3 (Entire)	C B **F** C C B D

SSSC = Side-Street Stop Control
Source: Fehr & Peers, 2023

The primary conclusions of the Cumulative No Project Conditions analysis are:

- During both AM and PM Peak Hour Conditions, the re-aligned and signalized Manthey Road / Roth Road intersection would operate at acceptable LOS B conditions;
- During both AM and PM Peak Hour Conditions, the side-street stop-controlled Southbound I-5 / Roth Road ramp terminal intersection would operate at unacceptable LOS F conditions with excessive delays and congestion affecting the southbound I-5 mainline;
- During both AM and PM Peak Hour Conditions, the side-street stop-controlled Northbound I-5 / Roth Road ramp terminal intersection would operate at unacceptable LOS F conditions with excessive delays and congestion affecting the northbound I-5 mainline; and
- During both AM and PM Peak Hour Conditions, the re-aligned and signalized Harlan Road / Roth Road intersection would operate at acceptable LOS C conditions.

6.2 Cumulative Plus Project Intersection Operations

As shown in Figure 3, under Cumulative conditions, access to the project site for passenger vehicles / delivery trucks would be provided via a right-turn in / right-turn out driveway on the future Roth Road, approximately 650 feet west of the southbound I-5 / Roth Road ramp terminal intersection. Access to the project site for CA legal and STAA trucks would be provided on the proposed relocated Manthey Road, approximately 300 feet south of the re-aligned Roth Road / Manthey Road intersection. **Figure 8** displays the intersection turning movements and lane configurations under Cumulative Plus Project conditions with side-street stop control for both the NB and SB I-5 ramp terminal intersections.. **Table 11** presents the results of the Cumulative No Project and Cumulative Plus Project AM Peak Hour intersection operations analysis with side-street stop-controlled I-5 / Roth Road interchange. Technical calculations are displayed in **Appendix D.**

Source: Fehr & Peers, 2023

The primary conclusion of the Cumulative With Project (With Side Street Stop Controlled I-5 Ramps) Conditions analysis (Tables 11 and 12) are:

- During both AM and PM Peak Hour Conditions, the re-aligned and signalized Manthey Road / Roth Road intersection would continue to operate at acceptable LOS B conditions;
- During both AM and PM Peak Hour Conditions, the side-street stop-controlled Southbound I-5 / Roth Road ramp terminal intersection would continue to operate at unacceptable LOS F conditions with excessive delays and congestion affecting the southbound I-5 mainline;

The primary conclusion of the Cumulative With Project (With Side Street Stop Controlled I-5 Ramps) Conditions analysis (Tables 11 and 12) are (continued):

- During both AM and PM Peak Hour Conditions, the side-street stop-controlled Northbound I-5 / Roth Road ramp terminal intersection would operate at unacceptable LOS F conditions with excessive delays and congestion affecting the northbound I-5 mainline;
- During AM Peak Hour Conditions, the re-aligned and signalized Harlan Road / Roth Road intersection would continue to operate at acceptable LOS C conditions; and
- During PM Peak Hour Conditions, as a result of increased congestion at the I-5 / Roth Road interchange, the re-aligned and signalized Harlan Road / Roth Road intersection would degrade from acceptable LOS C to marginal LOS E conditions.

As shown in Tables 11 and 12, with the I-5 / Roth Road ramp terminal intersections operating as side-street stop controlled results in excessive delays and congestion that would negatively affect both northbound and southbound I-5 mainline. Therefore, the following sections include the conversion of the ramp terminal intersection from side-street stop control to all-way stop control to determine the benefits of modifying the intersection control to serve projected Cumulative No Project and Cumulative Plus Project AM and PM peak hour traffic volumes.

Figure 9 display AM and PM peak hour turning movements and lane configurations at the study intersections under Cumulative No Project conditions with all-way stop control for both the NB and SB I-5 ramp terminal intersections. **Table 13** presents the results of the Cumulative No Project and Cumulative Plus Project AM Peak Hour intersection operations analysis with an all-way-stop controlled I-5 / Roth Road interchange. Technical calculations are displayed in **Appendix E**.

Figure 10 display AM and PM peak hour turning movements and lane configurations at the study intersections under Cumulative With Project conditions with all-way stop control for both the NB and SB I-5 ramp terminal intersections. **Table 14** presents the results of the Cumulative Plus Project PM Peak Hour intersection operations analysis with an all-way-stop controlled I-5 / Roth Road interchange. Technical calculations are displayed in **Appendix E**.

The primary conclusion of the Cumulative With Project Conditions (With All-Way Stop Controlled I-5 Ramps) Conditions analysis (Tables 13 and 14) are:

- During AM Peak Hour Conditions, the re-aligned and signalized Manthey Road / Roth Road intersection would continue to operate at acceptable LOS B conditions;
- During PM Peak Hour Conditions, as a result of increased congestion at the all-way stop controlled I-5 / Roth Road interchange, the re-aligned and signalized Manthey Road / Roth Road intersection would degrade from marginal LOS E (No Project) to unacceptable LOS F (With Project) conditions;
- During AM Peak Hour Conditions, the westbound Roth Road left-turn movement at the all-way stop-controlled Southbound I-5 / Roth Road ramp terminal intersection would continue to operate at unacceptable LOS F conditions;
- During PM Peak Hour Conditions, the entire all-way stop-controlled Southbound I-5 / Roth Road ramp terminal intersection would continue to operate at unacceptable LOS F conditions;
- During AM Peak Hour Conditions, the re-aligned and signalized Harlan Road / Roth Road intersection would continue to operate at acceptable LOS C/D conditions;
- During PM Peak Hour Conditions, as a result of increased congestion at the all-way stop controlled I-5 / Roth Road interchange, the re-aligned and signalized Harlan Road / Roth Road intersection would continue to operate at marginal LOS E (No Project) and unacceptable LOS F (With Project) conditions;
- During AM Peak Hour Conditions, the newly constructed Manthey Road / Project Driveway intersection is projected to operate at acceptable LOS A/B conditions for vehicles (cars and trucks) exiting the project site; and
- During PM Peak Hour Conditions, as a result of increased congestion at the all-way stop controlled I-5 / Roth Road interchange, the newly constructed Manthey Road / Project Driveway intersection is projected to operate at unacceptable LOS F conditions for vehicles (cars and trucks) exiting the project site traveling towards the I-5 / Roth Road interchange.

Figure 11 display AM and PM peak hour turning movements and lane configurations at the study intersections under Cumulative No Project conditions with signalized control for both the NB and SB I-5 ramp terminal intersections. **Table 15** presents the results of the Cumulative No Project and Cumulative Plus Project AM Peak Hour intersection operations analysis with a signalized I-5 / Roth Road interchange. Technical calculations are displayed in **Appendix F**.

Source: Fehr & Peers, 2023

The primary conclusion of the Cumulative With Project Conditions (With Signalized I-5 Ramps) Conditions analysis PM Peak Hour Conditions are:

- The re-aligned and signalized Manthey Road / Roth Road intersection would continue to operate at acceptable LOS B conditions;
- The improved and signalized southbound I-5 / Roth Road ramp terminal intersection would continue to operate at acceptable LOS B/C conditions;
- The improved and signalized northbound I-5 / Roth Road ramp terminal intersection would continue to operate at acceptable LOS B conditions;
- The re-aligned and signalized Harlan Road / Roth Road intersection would continue to operate at acceptable LOS C conditions; and
- The westbound left-turn (LOS E) can be improved by providing a southbound Manthey Road refuge / acceleration lane for vehicles (cars and trucks) exiting the project site and making a left-turn onto southbound Manthey Road.

7. Safety Assessment Analysis

This section describes the results of potential safety impacts associated with transportation and circulation that could result from implementation of the proposed Singh Petroleum Investments Project located in the City of Lathrop. It describes the safety-related reviews, investigations, and analysis that was completed for Existing Plus Project and Cumulative Plus Project conditions.

7.1 Planned Traffic Safety Improvements in the Project Area

The following documents and projects in the City of Lathrop, SJCOG, and Caltrans jurisdictions are reviewed for traffic safety improvements:

- **City of Lathrop General Plan – Circulation 3.14**
- **City of Lathrop Capital Improvement Program (CIP)**
- **SJCOG RTP/SCS**

The proposed Project includes an 8-island (16 position) fueling station, an 16,668 square foot retail / convenience store that includes a quality sit-down restaurant (QSR) with a drive-thru lane, an 8-truck fuel island, and a 13,846 square foot truck service / repair facility. Traffic generated by the proposed Project would increase traffic volumes on local roadways, I-5 / Roth Road on-ramps, I-5 / Roth Road off-ramps serving the project study area. Existing and future land use in the vicinity of the project area consists of a mix of warehousing, trucking, food, retail, and service uses. It should be noted that California legal and STAA trucks are prohibited from using Golden Valley Parkway, Spartan Road and the I-5 / Lathrop Road interchange

Traffic generated by the Project would not change the traffic mix in the area and would be compatible with existing and planned facility design. The Project will also support the implementation of City of Lathrop's General Plan and CIP to serve the Vehicle (cars and trucks), Transit, Bicycle and Pedestrian System. These improvement in the vicinity of the proposed project would improve multi-modal safety in the City of Lathrop. The proposed Project does not consist of any improvements or physical changes to the freeway mainline, freeway interchange, or other State Highway System (SHS) facilities. A detailed review of the facility design of the safety improvement projects listed above confirmed that the proposed Project would improve on the non-existent multi-modal facility by providing sidewalks along the project frontage on Roth Road and Manthey Road.

The City of Lathrop Bicycle Transportation Plan established the City's goals and objectives for bicycle travel. The Bicycle Transportation Plan establishes standards for bicycle facilities and identifies planned bicycle network facilities to address the City's bicycle needs. The Circulation Element developed as part of the proposed General Plan contains Policy CIR-2.1 and Implementation Actions CIR-2a and CIR-2g, which support bicycle and pedestrian routes and facilities and creating an active transportation plan supporting the development and funding of bicycle and pedestrian networks.

The City of Lathrop is currently preparing an Active Transportation Plan that will identify pedestrian, bicycle and transit improvements in the vicinity of the proposed Singh Petroleum Investments Project site. Based on the location of the future active transportation facilities, the following COA is recommended:

Traffic COA #3 – The developer shall coordinate with the City to construct sidewalks along the project frontage on Roth Road and Manthey Road and also preserve right-of-way along the future Manthey Road re-alignment. The driveways on Manthey Road and Roth Road shall be designed to provide visibility to eliminate potential hazards to pedestrians and adjacent parcels / homes. The design of the driveways shall be reviewed and approved by the Director of Engineering/City Engineer. The developer shall work with the City to refine the design of the re-aligned Manthey Road at the project driveway to provide the following:

- One southbound through travel lane;
- One 150-foot southbound left-turn lane:
- One northbound through travel lane'
- One northbound shared through / right-turn lane;
- One westbound left-turn lane;
- One westbound right-turn lane; and
- One southbound refuge / acceleration lane for vehicles (cars and trucks) exiting the project site and making a left-turn onto southbound Manthey Road.

7.2 Freeway Off-Ramp Queueing Analysis

As described in Chapters 5 and 6, intersection operations analyses were completed for the following freeway ramp terminal intersections:

1. Southbound Interstate 5 On/Off-Ramps / Roth Road; and
2. Northbound Interstate 5 On/Off-Ramps / Roth Road.

Results of the intersection operations analysis show that under Existing Plus Project Conditions, both side-street stop-controlled ramp intersections would continue to operate at acceptable LOS A/B conditions (Table 8) during the AM peak hour and acceptable LOS A/B/C conditions (Table 9) during the PM peak hour.

With the improvement and signalization of the I-5 / Roth Road interchange, both ramp intersections would operate at acceptable LOS B/C during both AM and PM peak hours under Cumulative No Project and Cumulative Plus Project conditions.

A freeway off-ramp queueing analysis was completed for both ramp intersections during the AM and PM peak hour. The off-ramp queueing analysis was completed using the Synchro 11 software package as described in Chapter 3, and the 95th percentile queue is reported for all freeway off-ramp movements.

Table 17 presents the results of the freeway off-ramp queueing analysis for the AM and PM peak hour under Existing and Existing Plus Project conditions. Technical Calculations are included in **Appendix A and Appendix B** for Existing, and Existing Plus Project Conditions, respectively.

As shown, with the addition of the project traffic, all freeway off-ramp queues can be accommodated within the off-ramp storage, except for the Southbound I-5 off-ramp right-turn movement. The short 25-foot right-turn lane results in minor queuing under both Existing and Existing Plus Project Conditions. It should be noted that under no circumstances does the queue extend back toward the freeway off-ramp gore point on southbound I-5.

Based on the freeway off-ramp queueing analysis, the proposed Project would not result in freeway off-ramp queuing spilling back from the I-5 / Roth Road interchange under Existing Plus Project Conditions.

Table 17: Freeway Off-Ramp Queueing Analysis – Existing and Existing Plus Project Conditions 95th Percentile Queue

Intersection	Move-ment	Storage (ft)	Existing				Existing Plus Project			
			AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
			Volume	Queue (ft)	Volume	Queue (ft)	Volume	Queue (ft)	Volume	Queue (ft)
1. SB I-5 Ramps / Roth Road	SB LT	525	123	128	123	113	123	125	123	132
	SB LT/TH	1,520	123	98	123	89	123	101	123	117
	SB RT	25	40	**72**	37	**67**	74	**81**	82	**87**
2. NB I-5 Ramps / Roth Road	NB LT/TH	1,300	8	28	35	84	21	66	82	100
	NB RT	625	172	101	181	173	172	90	181	131

Notes:
BOLD indicated 95th Percentile Queue Exceeds Storage Length
Source: Fehr & Peers, 2022

Table 18 presents the results of the freeway off-ramp queueing analysis for the AM and PM peak hour under Cumulative and Cumulative Plus Project conditions. As shown, with the improvement and signalization of the I-5 / Roth Road interchange, all freeway off-ramp queues can be accommodated within the off-ramp storage. Technical Calculations are included in **Appendix C and Appendix F** for Cumulative No Project and Cumulative Plus Project Conditions, respectively.

Based on the freeway off-ramp queueing analysis, the proposed Project Singh Petroleum would not result in freeway off-ramp queuing spilling back from the I-5 / Roth Road interchange under Cumulative Plus Project Conditions. With the improvement and signalization of the I-5 / Roth Road interchange, all freeway off-ramp queues can be accommodated within the off-ramp storage. Traffic generated by the proposed Project would remain compatible with the planned traffic safety improvements in the vicinity of the Project.

Table 18: Freeway Off-Ramp Queueing Analysis – Cumulative No Project and Cumulative Plus Project Conditions 95th Percentile Queue										
			Cumulative No Project				Cumulative Plus Project

	NB RT	625	230	136	310	202	230	138	310	219
Notes: **BOLD** indicated 95th Percentile Queue Exceeds Storage Length Source: Fehr & Peers, 2022										

It should be noted that the design of the I-5 / Roth Road interchange improvement has not been formalized; however, off-ramp queuing of the future interchange will be studied in detail as part of the Interstate 5 / Roth Road Interchange Improvement Project led by the City of Lathrop, in coordination with Caltrans.

Traffic COA #4 – The developer shall coordinate with the City to begin the Project Study Report / Project Development Support (PSR/PDS) project initiation document which will be used to program the project development support for State Transportation Improvement Program (STIP) and San Joaquin Council of Governments (SJCOG) Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) funding.

7.3 Site Access Evaluation

Under Existing / Near-term conditions, access to the project site would be provided via two (2) full-access driveway on Manthey Road, approximately 300 feet and 500 feet south of the Roth Road / Manthey Road intersection. The first driveway would be for passenger vehicles / delivery trucks and the second driveway would be for CA legal and STAA trucks. Two outbound (right-turn only) driveways would be provided on the proposed extension of Roth Road west of Manthey Road, approximately 400 feet and 550 feet west of the Roth Road / Manthey Road intersection. The first driveway would be for passenger vehicles / delivery trucks and the second driveway would be for California (CA) legal and Surface Transportation Assistance Administration (STAA) trucks. **Figure 2** displays the existing / near-term project site plan and access driveways.

Under Cumulative conditions, access to the project site for passenger vehicles / delivery trucks would be provided via a right-turn in / right-turn out driveway on Roth Road, approximately 650 feet west of the southbound I-5 / Roth Road ramp terminal intersection. Access to the project site for CA legal and STAA trucks would be provided on the proposed relocated Manthey Road, approximately 300 feet south of the re-aligned Roth Road / Manthey Road intersection. **Figure 3** displays the existing / near-term project site plan and access driveways.

Both project driveways were analyzed under the Existing Plus Project and the Cumulative Plus Project conditions. As shown in **Table 4** and **Table 16** both project driveways would operate acceptably as side-street stop controlled intersections, and project traffic would be able to enter and exit project driveways without excessive delay.

It is important that the site design provides adequate throat depth for vehicular traffic. Without this, queueing may extend onto public streets, thereby adversely affecting traffic operations and creating potential safety hazards.

The proposed site plan shows sidewalks being constructed along the project frontage on Roth Road and Manthey Road. A preliminary site plan review indicates adequate emergency access would be provided and there do not appear to be any geometric hazards. However, all project access intersections, internal intersections, and internal roadways should be carefully designed to ensure they can accommodate emergency vehicles. All intersections and street sections should be reviewed by the City of Lathrop and designed to comply with typical City standards.

8. Conclusions

This chapter presents the conclusions of the transportation impact analysis for the proposed Singh Petroleum Investments Project in the City of Lathrop.

8.1 Transportation Impact Analysis

Consistent with SB 743, VMT is used as the primary metric for identifying significant transportation impacts. VMT impact for the proposed Project was analyzed using methodology and threshold identified in the City of Lathrop draft TIA Guidelines.

Under Existing (Baseline) Conditions, based on the type of project that includes a combination of net new, pass-by and diverted vehicle trips, the proposed Project would generate an estimated average of 27.8 VMT per employee, which is 79.5% below the baseline city-wide average.

Under Cumulative Adopted General Plan Buildout conditions, based on the type of project that includes a combination of net new, pass-by and diverted vehicle trips, the Project would generate an estimated average of 43.1 VMT per employee, which is 79.6% below the cumulative city-wide average.

Therefore, because the proposed project would generate VMT per employee that is less than existing city-wide VMT by employee or cumulative city-wide VMT by employee, the VMT impact of the proposed Singh Petroleum Investments Project would be less-than-significant.

8.2 Intersection Operations Analysis

Under Existing / Near-term conditions, access to the project site would be provided via two (2) full-access driveway on Manthey Road, approximately 300 feet and 500 feet south of the Roth Road / Manthey Road intersection. The first driveway would be for passenger vehicles / delivery trucks and the second driveway would be for CA legal and STAA trucks. Two outbound (right-turn only) driveways would be provided on the proposed extension of Roth Road west of Manthey Road, approximately 400 feet and 550 feet west of the Roth Road / Manthey Road intersection. The first driveway would be for passenger vehicles / delivery trucks and the second driveway would be for California (CA) legal and Surface Transportation Assistance Administration (STAA) trucks.

The results of the intersection operations analysis indicate that with the addition of project-generated traffic, all study intersections would operate acceptably under Existing Plus Project conditions during the AM and PM peak hour.

Under Cumulative No Project and Cumulative Plus Project conditions, with improvements on Roth Road and at the I-5 / Roth Road interchange, all study intersections would operate acceptably at LOS A through D during both AM and PM peak hours.

Recommended Conditions of Approval

The following conditions should be incorporated into the Conditions of Approval for the proposed Project:

Traffic COA #1 – The proposed project will coordinate with the City of Lathrop Public Works Department to construct the fourth (west) leg of the Manthey Road / Roth Road intersection and modify the intersection from a side-street stop controlled to an all-way stop controlled intersection.

Traffic COA #2 – The proposed project will coordinate with the City of Lathrop Public Works Department to ensure access and egress from the existing driveway / house located directly south of the proposed full access driveway on the current alignment of Manthey Road is maintained and adequate site distance is provided.

Traffic COA #3 – The developer shall coordinate with the City to construct sidewalks along the project frontage on Roth Road and Manthey Road and also preserve right-of-way along the future Manthey Road re-alignment. The driveways on Manthey Road and Roth Road shall be designed to provide visibility to eliminate potential hazards to pedestrians and adjacent parcels / homes. The design of the driveways shall be reviewed and approved by the Director of Engineering/City Engineer. The developer shall work with the City to refine the design of the re-aligned Manthey Road at the project driveway to provide the following:

- One southbound through travel lane;
- One 150-foot southbound left-turn lane:
- One northbound through travel lane'
- One northbound shared through / right-turn lane;
- One westbound left-turn lane;
- One westbound right-turn lane; and
- One southbound refuge / acceleration lane for vehicles (cars and trucks) exiting the project site and making a left-turn onto southbound Manthey Road.

Traffic COA #4 – The developer shall coordinate with the City to begin the Project Study Report / Project Development Support (PSR/PDS) project initiation document which will be used to program the project development support for State Transportation Improvement Program (STIP) and San Joaquin Council of Governments (SJCOG) Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) funding.

Project Name: Singh Petroleum Investments Project

June 02, 2023

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)

(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Migratory Birds: In addition to responsibilities to protect threatened and endangered species under the Endangered Species Act (ESA), there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity, intentional or unintentional, resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). For more information regarding these Acts see https://www.fws.gov/birds/policies-and-regulations.php.

The MBTA has no provision for allowing take of migratory birds that may be unintentionally killed or injured by otherwise lawful activities. It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a federal nexus) or a Bird/Eagle Conservation Plan (when there is no federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures see https://www.fws.gov/birds/bird-enthusiasts/threats-to-birds.php.

In addition to MBTA and BGEPA, Executive Order 13186: *Responsibilities of Federal Agencies to Protect Migratory Birds*, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 provides for the protection of both migratory birds and migratory bird habitat. For information regarding the implementation of Executive Order 13186, please visit https://www.fws.gov/birds/policies-and-regulations/executive-orders/e0-13186.php.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Code in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

- Official Species List

OFFICIAL SPECIES LIST

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

PROJECT SUMMARY

Project Code: 2023-0088857
Project Name: Singh Petroleum Investments Project
Project Type: Commercial Development
Project Description: The Project site includes two distinct planning boundaries defined below. The following terms are used throughout this Initial Study to describe the planning boundaries within the Project site:

• Project Site (or Annexation Area) – totals 22.42 acres and includes the whole of the Project, including the proposed 19.63-acre Development Area, and 2.79 acres of land along Roth Road and Manthey Road.
• Development Area – totals 19.63 acres and is intended for the development of a travel center and associated circulation and parking improvements over two phases.

The proposed Project site is located on Assessor's Parcel Numbers (APNs) 191-250-14 and 191-250-06, located in the northern portion of the City of Lathrop. The proposed Project is located west of Interstate 5 (I-5) and is bordered by Manthey Road and the future extension of Roth Road.

Project Location:

The approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@37.85413145,-121.2853301578516,14z

Counties: San Joaquin County, California

ENDANGERED SPECIES ACT SPECIES

There is a total of 6 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

MAMMALS

NAME	STATUS
Riparian Brush Rabbit *Sylvilagus bachmani riparius* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/6189	Endangered

AMPHIBIANS

NAME	STATUS
California Tiger Salamander *Ambystoma californiense* Population: U.S.A. (Central CA DPS) There is **final** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/2076	Threatened

INSECTS

NAME	STATUS
Monarch Butterfly *Danaus plexippus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9743	Candidate
Valley Elderberry Longhorn Beetle *Desmocerus californicus dimorphus* There is **final** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/7850	Threatened

CRUSTACEANS

NAME	STATUS
Vernal Pool Fairy Shrimp *Branchinecta lynchi*	Threatened
There is **final** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/498	
Vernal Pool Tadpole Shrimp *Lepidurus packardi*	Endangered
There is **final** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/2246	

CRITICAL HABITATS

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

YOU ARE STILL REQUIRED TO DETERMINE IF YOUR PROJECT(S) MAY HAVE EFFECTS ON ALL ABOVE LISTED SPECIES.
